

Encore

Encore ESP

While they might look similar at first glance, it's what's under the hopper that makes all the difference.

The Encore was first introduced to make "cafe-quality" grinding available to home users at a friendly price point. As home espresso grows in demand, gear prices seem to be following suit. That's why the Encore ESP was born: to ensure that top-tier espresso grinding is affordable, while living up to the simplicity and consistency that Baratza is known for!

Year after year, the Encore regularly tops the "most-recommended" gear lists because of its solid build, consistent grinds, and simple interface. It's all backed by Baratza's industry-leading customer support, all to ensure every cup of coffee is a tasty one.

Our most-trusted grinder, re-engineered to be optimized for espresso. Features new metal internals for highly consistent grinds and durable, long-lasting operation. Comes with a portafilter dosing cup for faster workflow and reduced mess!

Comparison Table

	Recommended for Filter*	Recommended for Espresso*
Speed to Grind	0.8 g/sec — 1.1 g/sec	1.5 g/sec — 2.4 g/sec
