

COMANDANTE® X25 TRAILMASTER®

The new **COMANDANTE® X25 TRAILMASTER®** is a sturdy, robust and lightweight coffee grinder with excellent outdoor attributes. The body design features a modern polygonal design and is equipped with a state-of-the-art **COMANDANTE® NITRO BLADE® S2** burr.

Selecting the best material for an outdoor grinder body is mission critical. After comprehensive research in our laboratories and after conducting extensive field tests, our engineers selected a special reinforced techno-polymer as the material of choice for the new X-Series outdoor products — **QTP®**.

QTP® is a strong and robust techno-polymer with a substantial amount of reinforcement particles interwoven into an elastic and strong long-chain polymer structure. It feels like ceramic and performs like a technical super composite.

The **QTP®** composite was originally developed for mechanical and equipment engineering, often as a replacement for brass. It is also being used in the automotive industry for bearing and gearbox components.

QTP® is FDA food and water approved, and is a trademark of **COMANDANTE®**.
