

Crystal Eye B75 Coffee Filter

Wonderful gear for coffee events
Even extraction for original cleaner flavors

Flat bottom design to extract evenly

More consistent extraction for better sweetness and BODY

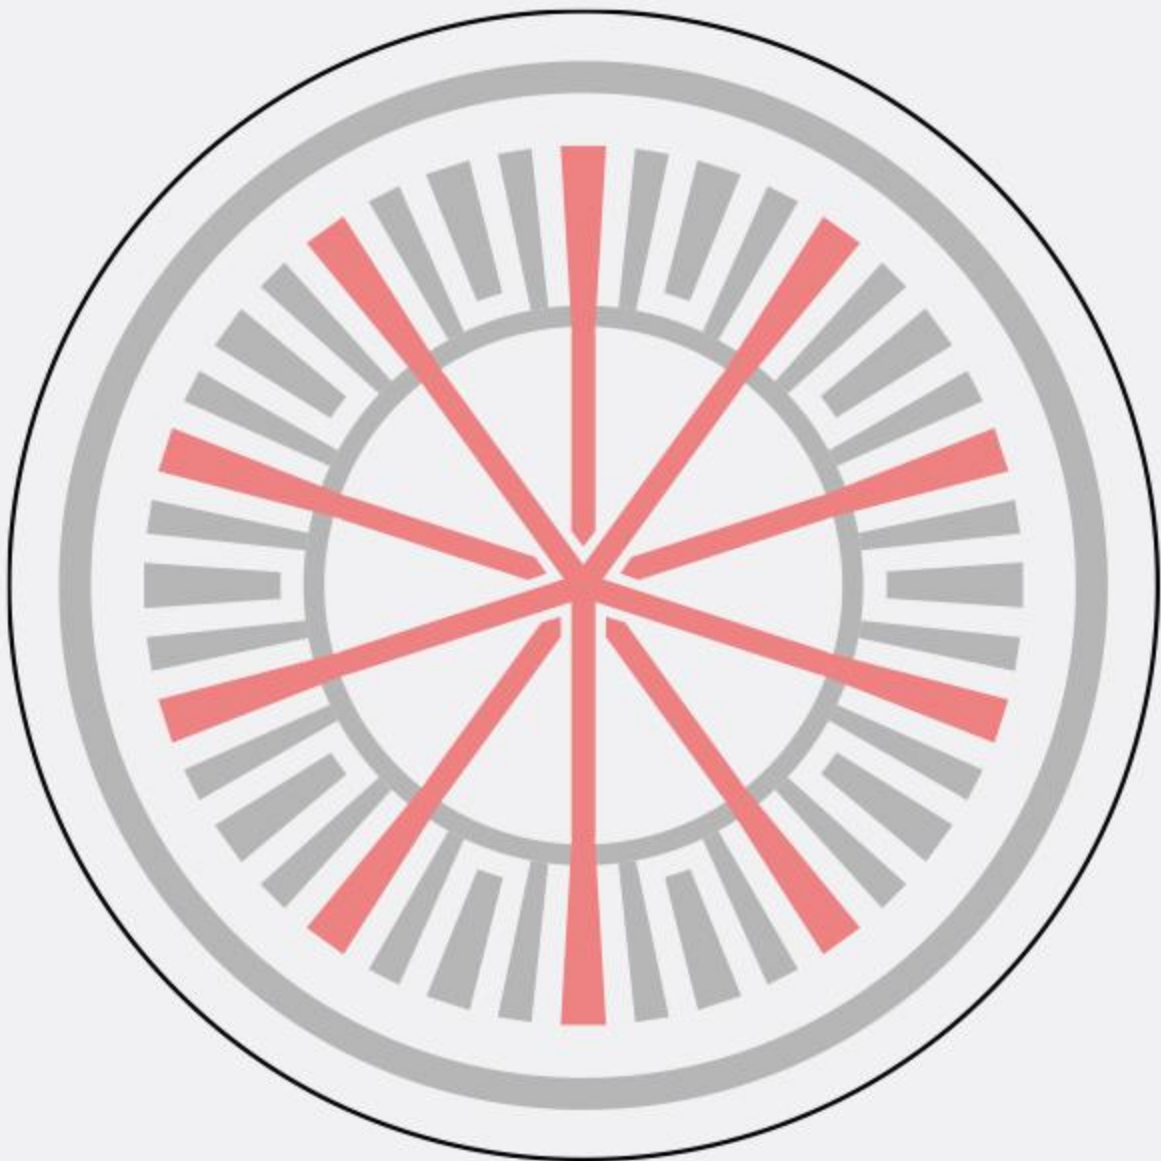

75° Angle accelerates flow rate

The wall is tilted at an angle of 75° so that the ground layer can be stable and closer to cake-shape
It also speeds up flow rate

Crossing bottom ribs support the surface of paper filter

There are 10 ribs at the bottom to stably support paper filter so stream is fluent and unobstructed.

20 concave body ribs for faster flow rate

Bottom 10 ribs and 20 body grooves can let water go faster than the average designs in the market.

Right for 15g brewing

It's easier to uniformly extract only 15g ground coffee according to coffee competition.

Tritan PCTG material

It's safe, healthy and heat-resistant.

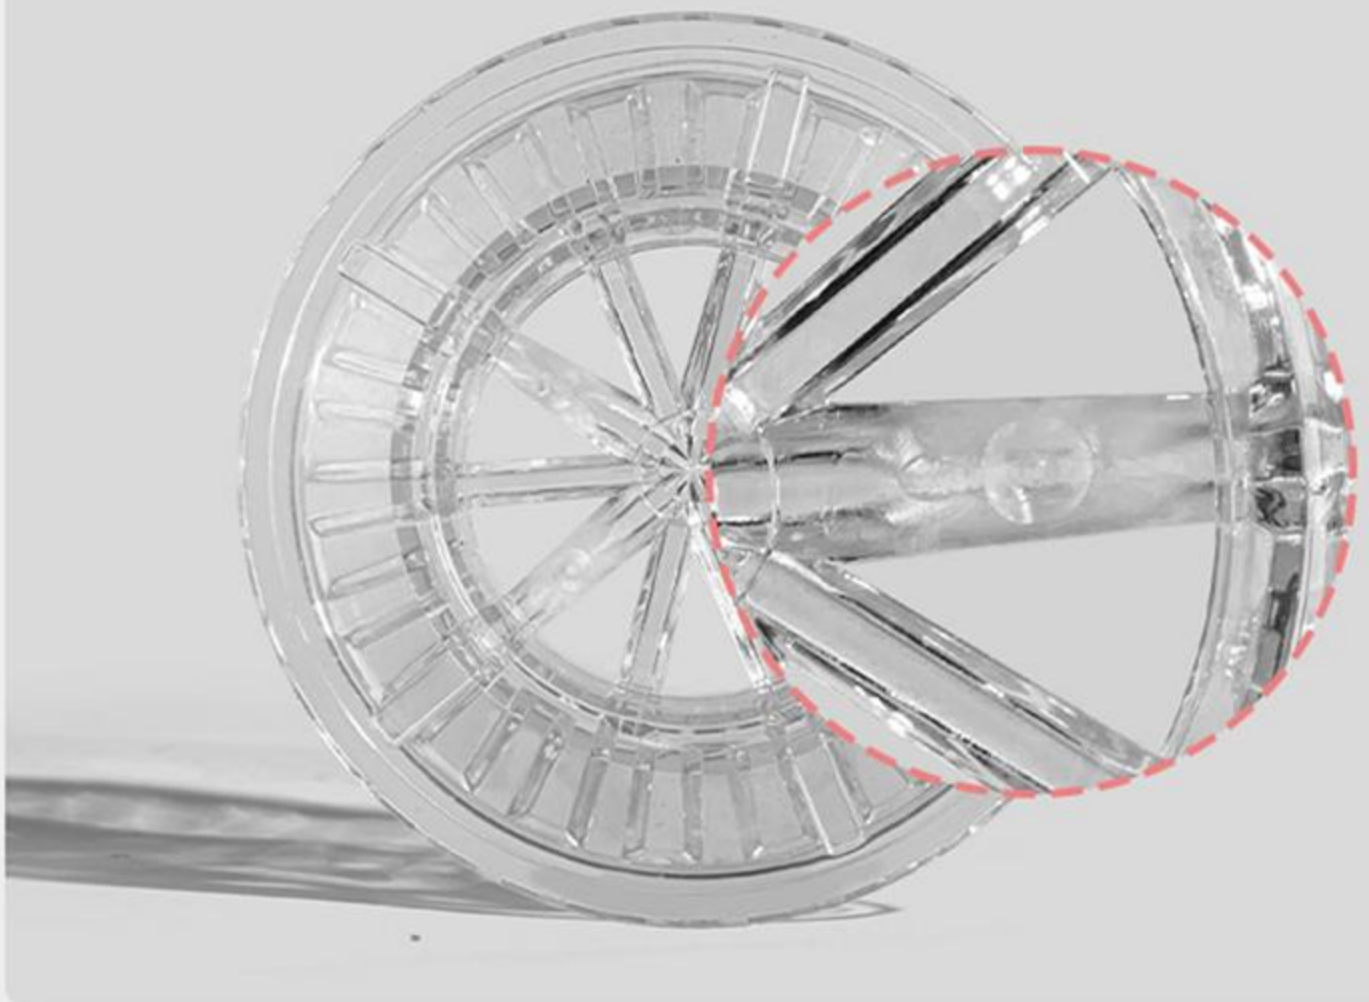

Transparent and bright artistic

It's crystal clear and transparent in the sun and light and shows unique light and shadow

Instructions on the injection molding process

Due to the limitations of the injection molding process, the bottom will be fogged due to internal stress release, which is a normal phenomenon and it does not affect normal use.

Product Parameters
