

Glass Crystal Eye Dripper

Best gift for OCD coffee lover
Paper filter is perfect close to the Dripper

Extraction in 3 layers

Closer fit with paper

Smoother Permeability

Diamond-like luster

Precise design for Professional Extraction

A. Sealed Layer

Filter paper and dripper fit fully. There is no groove between them. Water can't pass. It can control the water-flow when you pour in a larger water flow.

B. Water Layer

The area of the concaves is gradually reduced to control the flow rate.

C. Coffee Layer

15 / 20g ground coffee will just take over this layer.
There are not many ribs in this layer but more grooves
It's similar to the flannel-like extraction.

Closer fit with paper filter

Colored area means the area that filter paper fit the dripper. It ensures close fit of filter paper and the Dripper. Therefore, the shape of coffee ground after brewing is round and full. These will help with a evener extraction.

Filter fully fits the dripper

Enjoy Simple brewing way

Pour-over is a Simple but Professional brewing way

Extra Thick Borosilicate Glass

Sturdy and durable with more uniform extraction

Extra thick glass with PP Base

There is a layer of silicon ring between the dripper and the base

The Base is detachable
