# etón

Thank you for joining the Etón family.

We recommend you visit our website (**www.etoncorp.com**) to register your product, review more detailed instructions as well as find the latest downloadable manuals, warranty information and useful videos on how your new product operates.

To setup and get the most out of your Blackout Buddy Color Connect please download the **Etón Smart app (https://apple.co/2BL8KE6)** from the **Apple App Store** or the **Etón app (http://bit.ly/2txSMsb)** from the **Google Play Store** and follow the in-app instructions for pairing, etc.

- Ambient Light Sensor
- Flashlight
- Nightlight
- Power Button
- AUTO Mode
- Slide Switch — OFF
- DARK Mode
- Motion Sensor
- Foldable AC Plug

Power Button - Turns the device on manually. After plugging the Blackout Buddy Connect Color into AC power press and release the Power Button and the Nightlight will start cycling through the available colors. When the desired color appears on the Nightlight press and release the Power Button again to lock in that color. Leave the BB Connect Color alone and it will automatically operate per the Mode chosen with the Slide Switch.

Slide Switch - The Slide Switch selects between 3 modes of operation:

AUTO Mode - In Auto Mode the BB Connect Color will turn the Nightlight on when it gets dark and turn it back off when the room is lightened. In addition the BB Connect Color will utilize the Motion Sensor to determine if there is motion inside the room or not. If there is no motion the Nightlight will automatically dim after 30 seconds. If Motion is detected the Nightlight will once again return to its brightest status.

OFF Mode - The Nightlight will be Off regardless of the amount of light in the room.

DARK Mode - In Dark Mode the nightlight will operate exactly the same as in Auto mode with the exception of the behavior when there is no motion in the room. If no motion is detected the Nightlight will turn off completely. Once motion is sensed the Nightlight will return to its brightest status.

Ambient Light Sensor - The BB Connect Color uses the Ambient Light Sensor to determine how much light is in the room. When the BB Connect Color determines the room is dark it will turn the Nightlight on. When the BB Connect Color determines the room is light again the Nightlight will then automatically turn off. Note: Blocking the Ambient Light Sensor will result in the Nightlight staying always on.

Flashlight - The Flashlight is operated by the Power Button. If the BB Connect Color is unplugged from AC power or AC power is lost due to power failure the Flashlight will automatically turn on. Pressing the Power Button will turn the Flashlight off. Pressing the Power Button again will turn the Flashlight back on.

Motion Sensor - The Motion Sensor utilizes Passive Infra-red (PIR) technology to determine if there is motion inside of of the room. This sensor controls both the Nightlight per the Mode selected with the Slide Switch as well as provides input to the Etón iOS and Android applications, enabling Push Notifications and Custom Automations.

Reset - When plugged into AC power (the wall) the Power Button, when held for 10 seconds, will completely Reset the device and prepare it to connect with a new network.
