

AMP 250 DSP HS

The AMP 250 DSP is a DIN RAIL stereo amplifier with DSP (digital signal processor) for connecting various sound sources via the line-in. A specially developed algorithm - the WHD Adaptive Sound Plus - optimally adjusts the sound at different volumes to the human ear. There are 3 different sound presets available: Neutral, Loudness and Extra Bass, which can be easily selected via a switch on the device. The AMP 250 DSP offers the possibility to connect two 4 ohms or four 8 ohm speakers to play music in hi-fi quality and in higher volumes in a larger room. The AMP 250 DSP has an automatic line-in that is turned on / off via the music signal.

Technical Data	AMP 250 DSP HS
Audio Input	Line-In (stereo)
Audio Output	speaker, stereo 2x50W
Operating Voltage	24 VDC
Material	housing: plastic
Accessories	PS 25/5A: power supply
