

### AirBridge Pro

The AirBridge Pro is a Bluetooth/(W)LAN audio receiver with Ethernet connector (RJ45), analog AUX output and digital optical audio output.

Like all of our WLAN receivers, it already has an Internet radio on board. This has the great advantage that the AirBridge Pro can also be used to listen to Internet radio without a smartphone / tablet.

If the AirBridge Pro does not play an internal internet radio station, then it receives the music e.g. from a smartphone or tablet via the WHD multiplayer app or any music apps via AirPlay\*, DLNA or UPnP and plays them back via the connected speakers/amplifiers.

Like all WHD WLAN receivers and speakers, the AirBridge Pro is also compatible with spotify connect.

Technical Data	AirBridge Pro
Audio Output	Aux- and optical digital
Other Interfaces	AirPlay, DLNA, UPnP, Bluetooth
Operating Voltage	230V
Material	housing: plastic
Accessories	incl. USB-power supply and audio cable
