

HOW TO USE YOUR CAMPING HAMMOCK WITH MOSQUITO NET

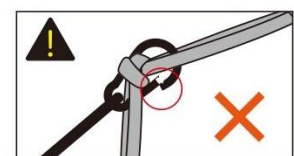

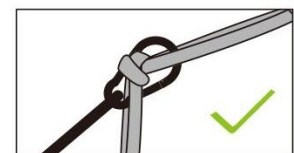

Setting up a camping hammock with a mosquito net can be a bit tricky for the first time, but it's not too difficult once you know what to do. Here are some instructions to help you get started:

1. **Find a suitable spot:** Look for two sturdy trees or other anchor points that are about 3-4m apart. You want to make sure they can support your weight.
2. **Attach the straps:** Wrap the straps around each tree, as shown in the image below. Make sure they are at the same height and the same distance apart. Make sure the straps are tight and secure.
3. **Hang the hammock:** Unfold the hammock and attach one end to the straps using the provided carabiners. Do the same for the other end of the hammock. Make sure the hammock is level and centered between the two trees.
4. **Secure the mosquito net:** Insert the cords provided through the loops in the mosquito net. Attach each end to the trees, making sure they are higher than the straps for the hammock.
5. **Get in and adjust:** Carefully climb into the hammock and adjust the net as needed. Relax and enjoy your mozzie-free hammock!

Always check that your hammock is secure and safe before using it. Happy camping!
