HANDLEBARS

Advanced Abuse  
Reduction

for a better ride...

**FASST**  
COMPANY

"Flexx handlebars dampen the impact on harsh landings and make for a smooth day riding keeping you relaxed and in control when riding rough terrain."

— Lorin Whitaker

## Flexx Handlebar

The confidence inspiring Flexx Handlebar isolates your upper body from abuse, allowing you to ride longer and charge harder with more control by absorbing abuse and vibration in an unnoticeable manner.

Flexx Handlebars are precise in the steering path, yet forgiving near the load path of the suspension, yielding uncompromised control and abuse reduction. Flexx Handlebars provide the feedback and feel of a traditional bar for proper control, while taking the edge off of the abuse. Since you do not have to steer through the abuse reduction mechanism control is not diminished.

Flexx Handlebars provide incredible small bump compliance, while comforting on catastrophic impacts. By small bump compliance we are speaking to the irritating high frequency chatter, chop and bumps that are too small for your fork to absorb. Before the suspension starts to work the bars are absorbing the abuse, smoothing out the trail. When the suspension is bottomed out the bars comfort on the catastrophic impact, spreading the load over a greater period of time. In between the small bump compliance and bottoming Flexx Handlebars are undetectable, tracking along with the suspension, taking the edge off of your hands, for a dramatically improved ride.

# The Specs

**Rise:** 25mm

**Clamp Diameter:** 31.8mm

**Weight:** 440grams

**Width:** 800mm

**Upsweep:** 5-6\*

**Back sweep:** 8\*

**Materials:** American Made UD carbon,  
7075 Aluminum, Titanium

**Effective suspension travel:** 5\* length  
of handle dictates overall travel

**Elastomer included:** Soft, medium,  
hard compression and rebound

AMAZING! On bumpy, rocky terrain Flexx Handlebars smoothed everything out. At the end of any ride there is a huge difference in feeling from my hands, wrists, shoulders, neck, back. On a rigid bar I would always have some of feeling joint soreness, or muscle tension; that is gone with the Flexx Handlebars. I'm more confident with Flexx Handlebars, they are one more thing that makes my ride more enjoyable & faster through certain sections. Flexx Handlebars absorb things that suspension doesn't!

— Ian Shockley, Owner Bike Fix Utah

# Flexx Enduro

The Flexx Enduro utilizes an aluminum center section that provides better structural integrity and performance for those that demand the most from their bars. The aluminum center section better restrains the pivot points, forcing all loads directly through them. Precise steering, yet an incredibly smooth ride, you'll dig the Flexx Enduro ride after ride.

Handle is completely isolated through fiber pivot bushings along with compression and rebound elastomers.

Aluminum center section provides better structural integrity and performance by better restraining the pivot points, forcing all loads directly through the elastomers.

7075 Aluminum provides the skeletal base for superior abuse reduction.

Titanium pivot pin and hardware.

3 different compression and rebound elastomers allow you to tune the bar to your preferences.

Patent#6,860,500

# Flexx Enduro E

Enduro E, built for the varying demands of your E-mtb, tuned specifically to compliment the flow and speed of an E ride. The limiting factor of many E-mtb rides are often hands, wrists, arms, and shoulder issues as you cover more ground at a faster pace. Flexx MTB Handlebars minimize those issues so you can ride the way you'd like.

I've been racing bicycles for over 30 years, with a lot of elite racing experience in different disciplines and product development along the way. I found Flexx Handlebars to have a really positive feel, on big hits the bar absorbs the impacts taking the abuse out of harsh landings, rock beds, G-outs, and everything in between. I'm hitting obstacles with more speed and confidence, and getting more runs in every session. I haven't been this comfortable in years. I'm truly reliving my glory days and loving every run. Thanks Fasst Co!"

— Bernard Unhassobiscay, Former National racer and UCI World Downhill Masters Champ

Utilizes American Made UD composite handles.

7075 Aluminum proves the skeletal base for precise rider input.

E-tuned elastomers dial the bar in for your needs.

"Since I broke my hand last year I've had problems with my hand falling asleep on rides. First ride out with Flexx Handlebars I had no numbness at all! I'm totally sold on this addition to my bike's suspension. I also love that the Flexx Bars are made locally in Southern Utah. Additional perk...custom laser engraving to make the bars your own!!"

— Angela Anderson, Women  
Ride Utah

Consistently unique, consistently misunderstood. It's who we are and who we've always been. "Flex...!!!! Holy #@&^!". We get it, but you don't understand...yet. The sole focus with Flexx Handlebars is absorbing abuse while maintaining a traditional feel and maximizing control. It's our guiding light and hard to understand until you ride with them.

The coolest thing about the Flexx Handlebar experience is the consistent feedback riders of all skill levels, size, and age have had. Universally they are able to ride longer, and have more fun. Their comments are all similar as is their stoke when telling us about their experience.

As a rider based brand we've always loved anything with two wheels. Disrupters from the beginning, we're known in moto for our ride changing products and exceptional service. Now in the mountain bike world we're positioned the same, which is great, as you the rider will love the comfort added. We appreciate any feedback you have about our products, we love to learn from our riders, and look forward to helping you get more enjoyment out of your ride.
