Contents

Overview

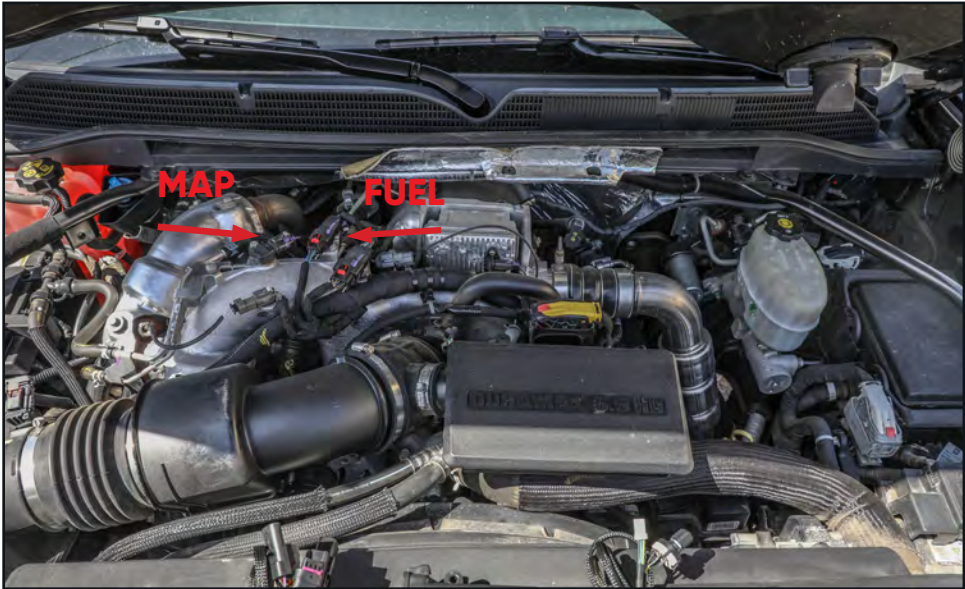

What you will need:

- Dr Performance Module
- 15 minutes of your time

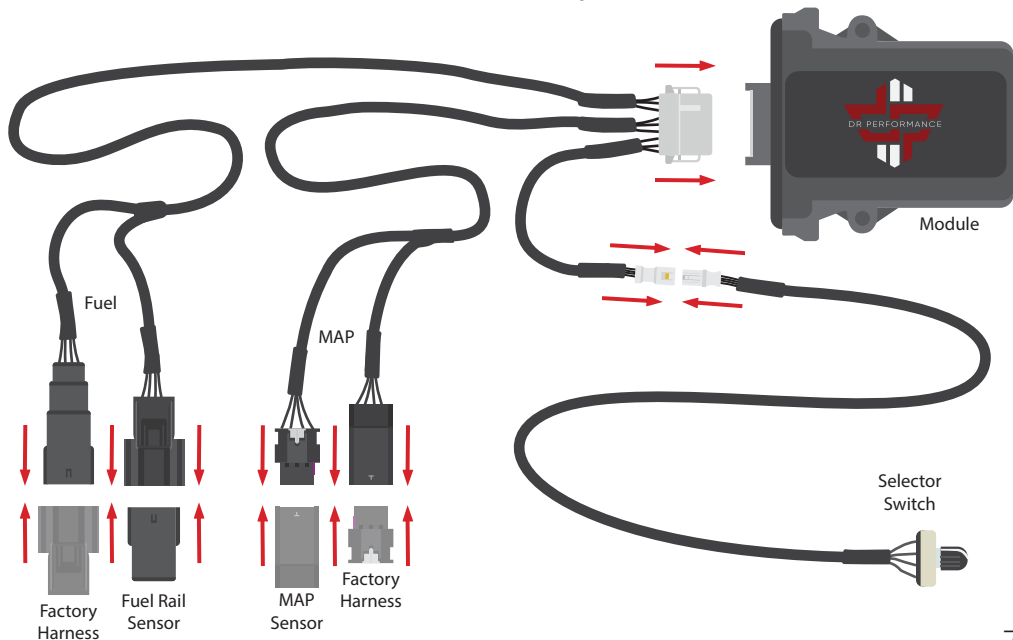

Be sure your truck has been off, with the hood unlatched and key fob located away from the vehicle for at least 15 minutes before installing the module. Key fob needs to continue to stay away from the vehicle for the entire installation process.

Engine Map

Harness Layout

Fuel Connector

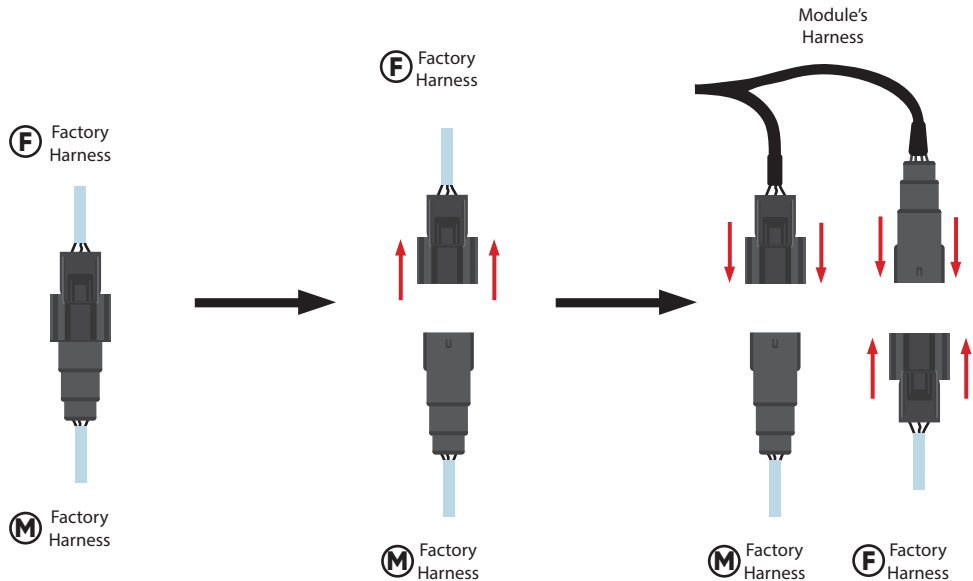

- ① Locate Fuel Connector access point.
- ② Disconnect your truck's factory harness from the Fuel Connector.
- ③ Connect the module's harness to the Fuel Connector.
- ④ Connect the module's harness to the truck's factory harness.

Make sure you pull out the locking tab before disconnecting, and push in after reconnecting any of the connectors.

Fuel Installation Diagram

MAP Sensor

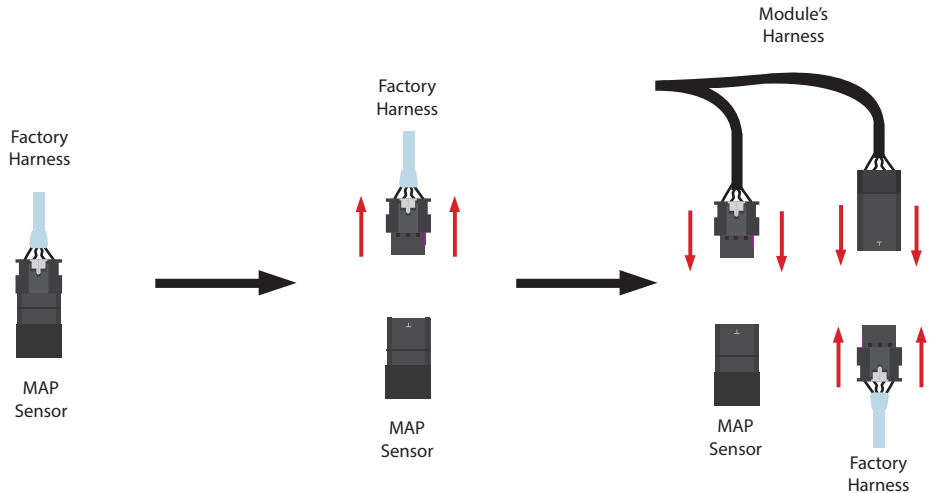

- ① Locate MAP Sensor.
- ② Disconnect your truck's factory harness from the MAP Sensor.
- ③ Connect the module's harness to the MAP Sensor.
- ④ Connect the module's harness to the trucks factory harness.

Do not pull on the wires, only the connectors.

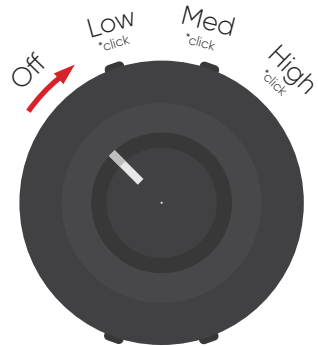

MAP Installation Diagram

Selector Switch

The selector switch plugs into the small white connector coming off of the module's main harness.

The dial going clockwise:
Off - Low - Medium - High

Low: — Towing heavy and low traction situations.

Med: — Moderate towing and ideal for everyday driving situations.

High: — Ideal for empty highway driving. **Use for best mileage gains.**

The switch must remain plugged in to stay in the desired setting. You can run the switch into the cab or keep it tied up under the hood. Leave in one setting as much as possible.

Review

Thank you for your purchase!

An instruction video is available at www.drperformancex.com.

If you have any questions or concerns please give us a call at 1 (800) 406-5257 or email us at company@drperformancetech.com.

This concludes the installation.
