

Push firmly on the plastic grommet.

The grommet will pop out on the other side, keep pushing until it is completely out. This requires a bit of force so you can use a blunt object and gently tap on it until the grommet pops out.

The plastic grommet consists of two pieces. The rope is anchored in the cavity inside the grommet. To install a new rope, simply reverse the process.

The ropes have different lengths so make sure you install the ropes in the correct holes.
