THE CUT

THERE ARE FOUR CUTS AVAILABLE: FULL, MODERATE, TRIM, REPLICATE

FULL CUT

This cut is to provide your client with room and comfort and is also fuller through the entire body, shoulder and arms. Recommended for a portly profile or for the client who prefers a loose fitting shirt. For an average size, our mathematical model adds 7 inches to the chest measurement.

REGULAR CUT

This cut generally follows the client's couture and creates a nice relaxed silhouette. For an average size, our mathematical model adds 5.5 inches to the chest measurement.

TRIM CUT

This cut is typically for the younger, slimmer and slender silhouette. It lays much closer to the body. For an average size, our mathematical model adds 4.75 inches to the chest measurement.

REPLICATE

This replicates the cut of a sample shirt for the customer.

NOTE:

Our system applies a mathematical model to determine the client's offsets. The information provided is for a average size male.

2 COLLAR
