

HEALTHY CRICKET HABITAT

Container

Crickets like lots of space!
Vented lid.
Plastic or glass.
Clean with mild bleach solution & let dry completely.

Privacy

Cardboard egg cartons give crickets their own little apartments.
Cartons can be torn up too.

Food

Food should always be present.
Use oatmeal, cornmeal, or cricket food.

Water

Water should always be present.
Crickets can drown, so use a wet sponge, or slice of fruit for them to drink from.

Cleanliness

2 times per month, gently remove crickets and place in another box. Thoroughly clean container with mild bleach solution and let dry thoroughly.

I need food, water, a clean, warm (70 – 75F) environment, and ventilation.
If one of my buddies die, please remove him, or I will get sick.
