

1. Download

Download edelkrone App to your mobile device from the App Store or Google Play. Links can be found below.

2. Start with powering your device

Attach the batteries to turn the device ON. You may leave the batteries attached until you pack up the device.

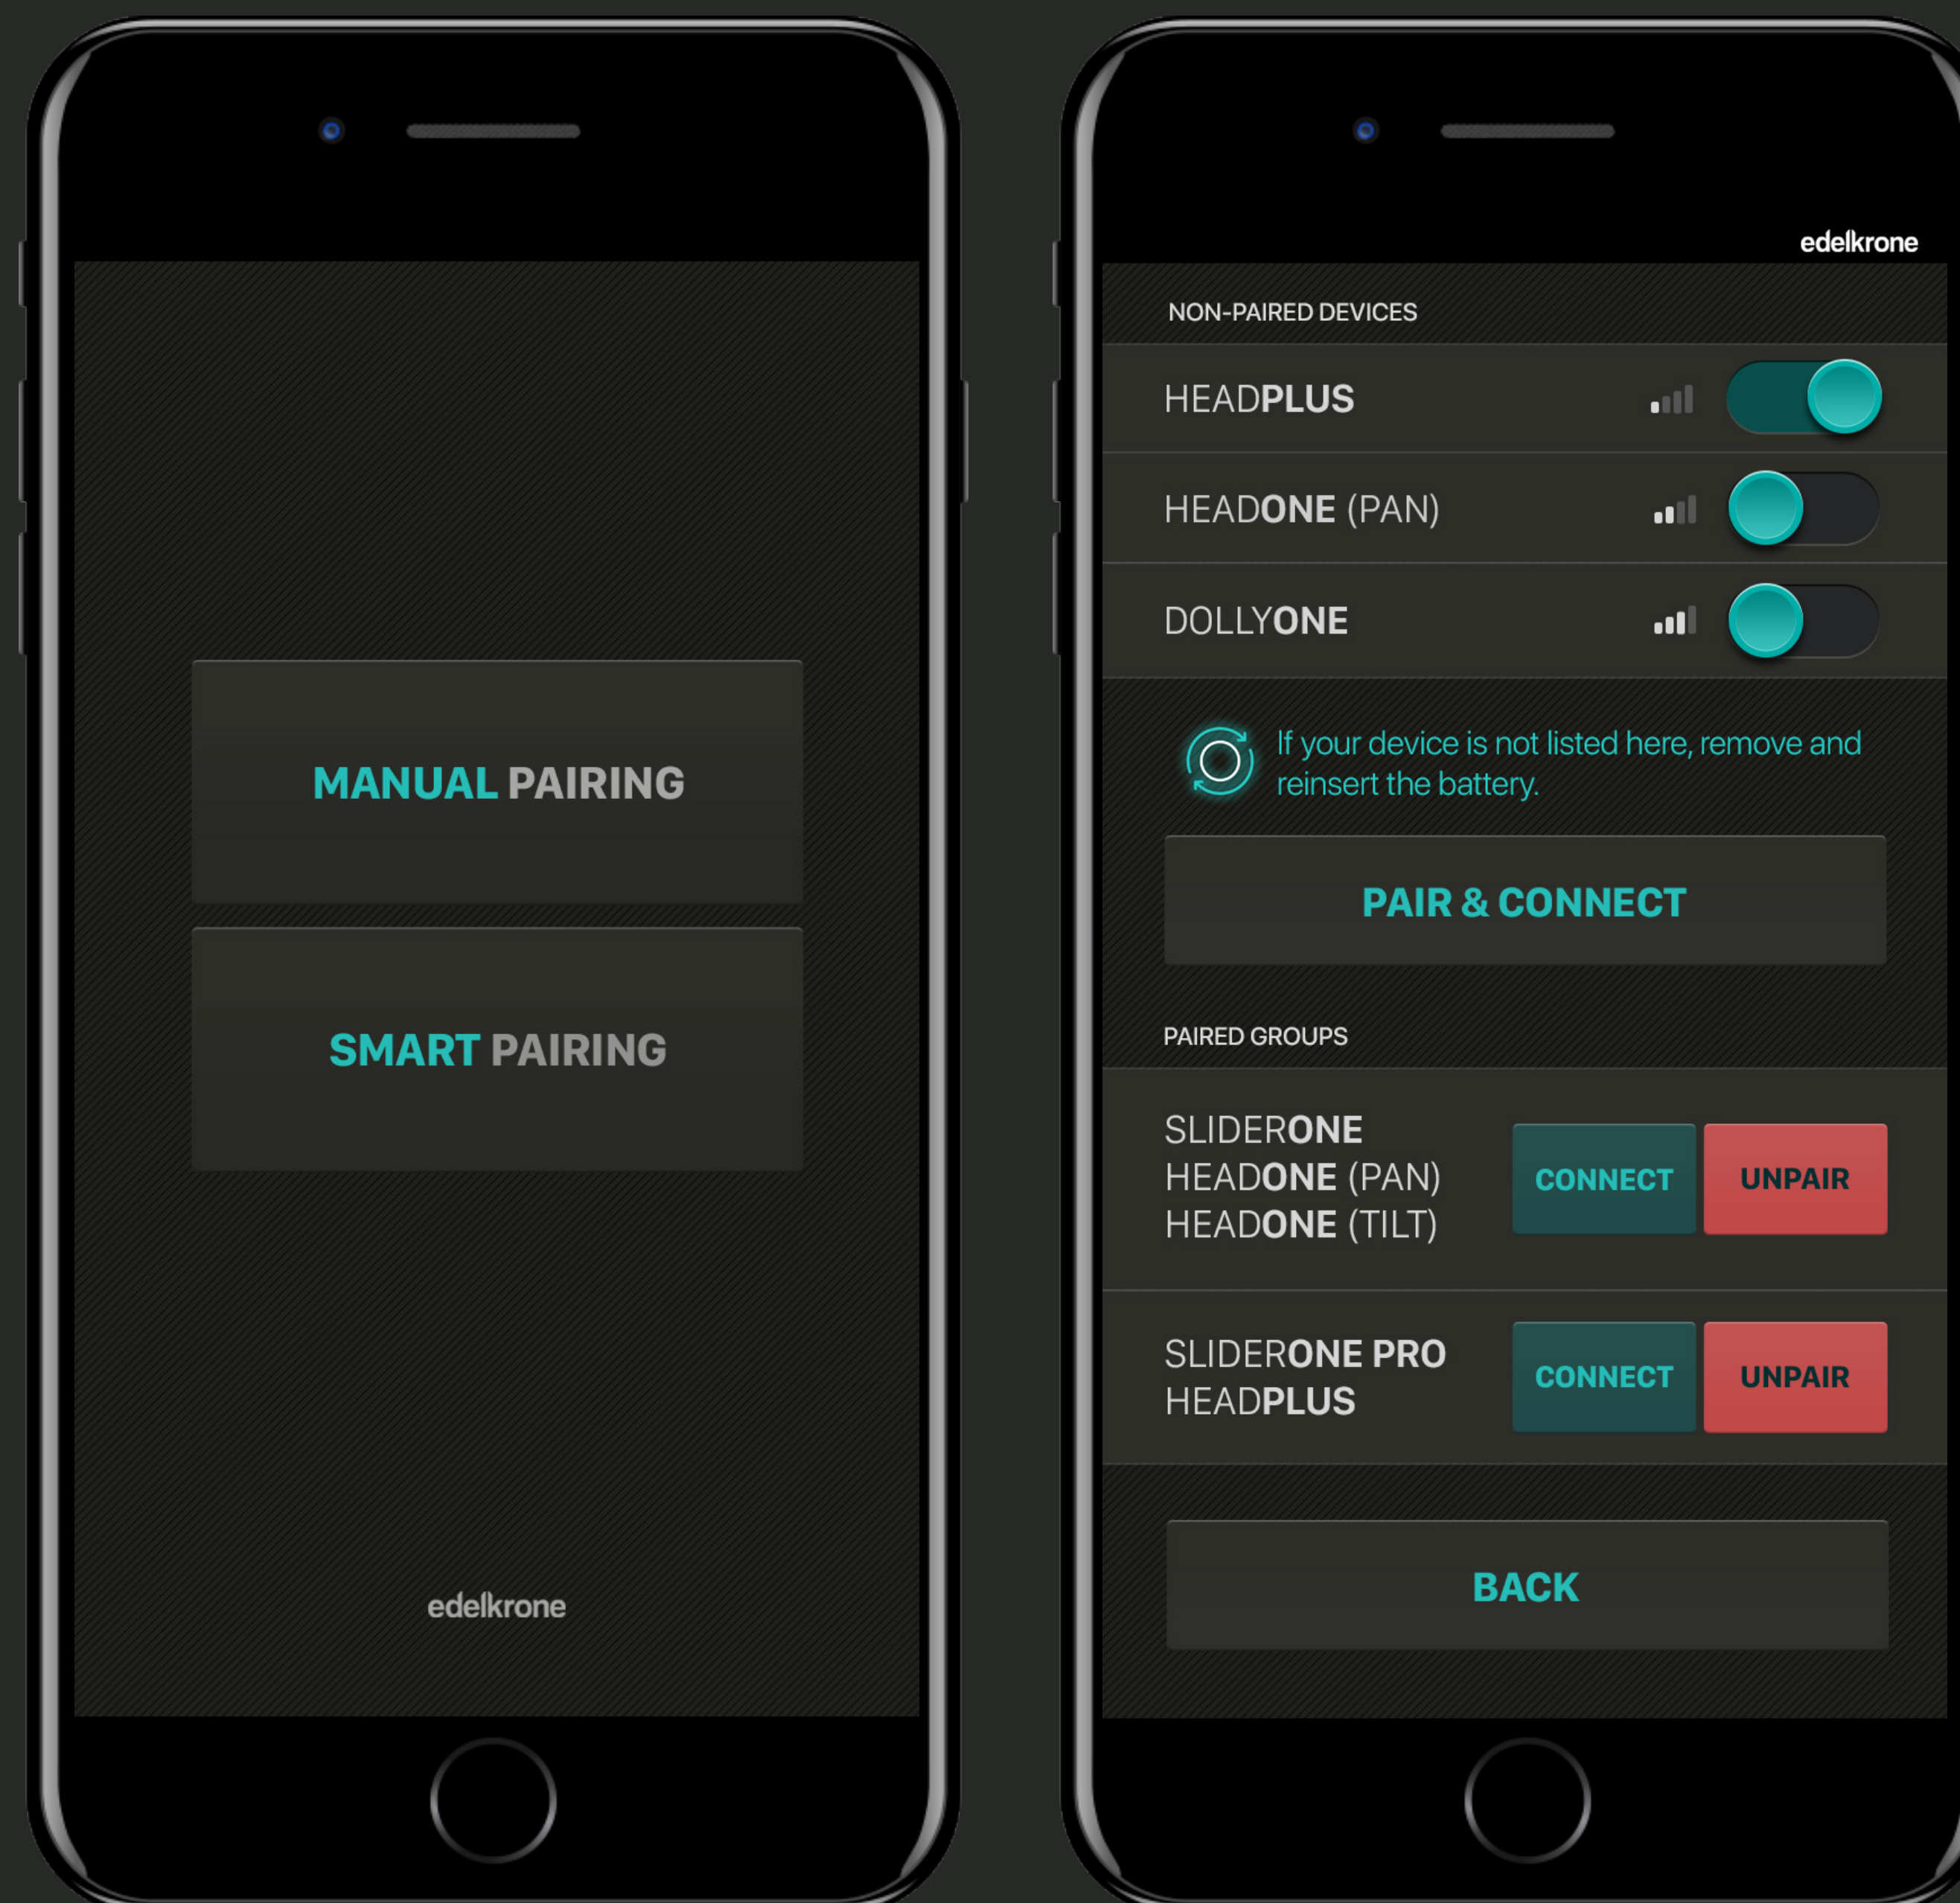

3. Scan & Pairing

edelkrone App cleverly scans the available devices in its surroundings and pairs with them automatically, giving you a single screen to control all devices together.

Smart Pairing : In order to control a bundle, please insert batteries on each device and wait until you hear each device beep. Once you hear a beeping sound from all devices, you can choose smart pairing.

If you choose smart pairing without waiting to hear each unit beep, system will ignore the remaining units. If edelkrone application does not combine one of the devices, please power cycle each device and terminate the application and restart again.

Manual Pairing : Your unpaired & paired devices are listed on this screen if you choose Manual Pairing. Just switch on the products you want to bundle and "Pair & Connect". Or, you may connect your paired bundles easily.

 Please see the link for the user manual video of the edelkrone application:
<https://youtu.be/LWqZ7gk5MP8>

KEYPOSE MODE PAGE

Dolly or Slider with HeadPLUS

Switches to other paired bundles.

Enables tilt motion when activated. (Turns blue when activated.)

Manual pan & tilt control joystick.

Enables pan motion when activated. (Turns blue when activated.)

Press & scroll to adjust the focus. (Active when Focus module is attached.)

- Press & hold to save the Pose. (Saves slide, pan&tilt, focus configuration as Pose.)

- Press to recall the Pose.

- To activate Loop Mode, press any two of the Pose buttons at the same time with two fingers.

- Double tap to any Pose button to recall the position without considering speed & ease in/out adjustments.

Adjusts the speed of the transition between Poses.

Adjusts the acceleration & deceleration of the transition between Poses.

Switches to Time-Lapse Mode.

Switches to KeyPose Mode.

Switches to Sequencer Mode.

Opens Settings page.

Activates Power Mode. (Power of the motors is increased with one drawback; which is louder operation noise in Head units.)

Manual slide joystick.

Opens Path Creation screen if bundle includes Dolly unit.

One tap on any joystick to open numeric control panel to set position. (Details on page 6)

Opens numeric control panel to edit position. (Details on page 6)

Deletes pose.

Yellow frame indicates that transition is in progress.

Turns the camera on to take photo of the Pose to label.

Shows the duration of transition.

Starts record feature. (For further information please check Record Page.)

Stops & saves recorded motion.

Switches to Stop Motion Mode.

Switches to Target Mode.

Please see the link for the user manual video of the KeyPose Mode: <https://youtu.be/IW8WHWfepfE?t=153>

KEYPOSE MODE PAGE

With different bundles

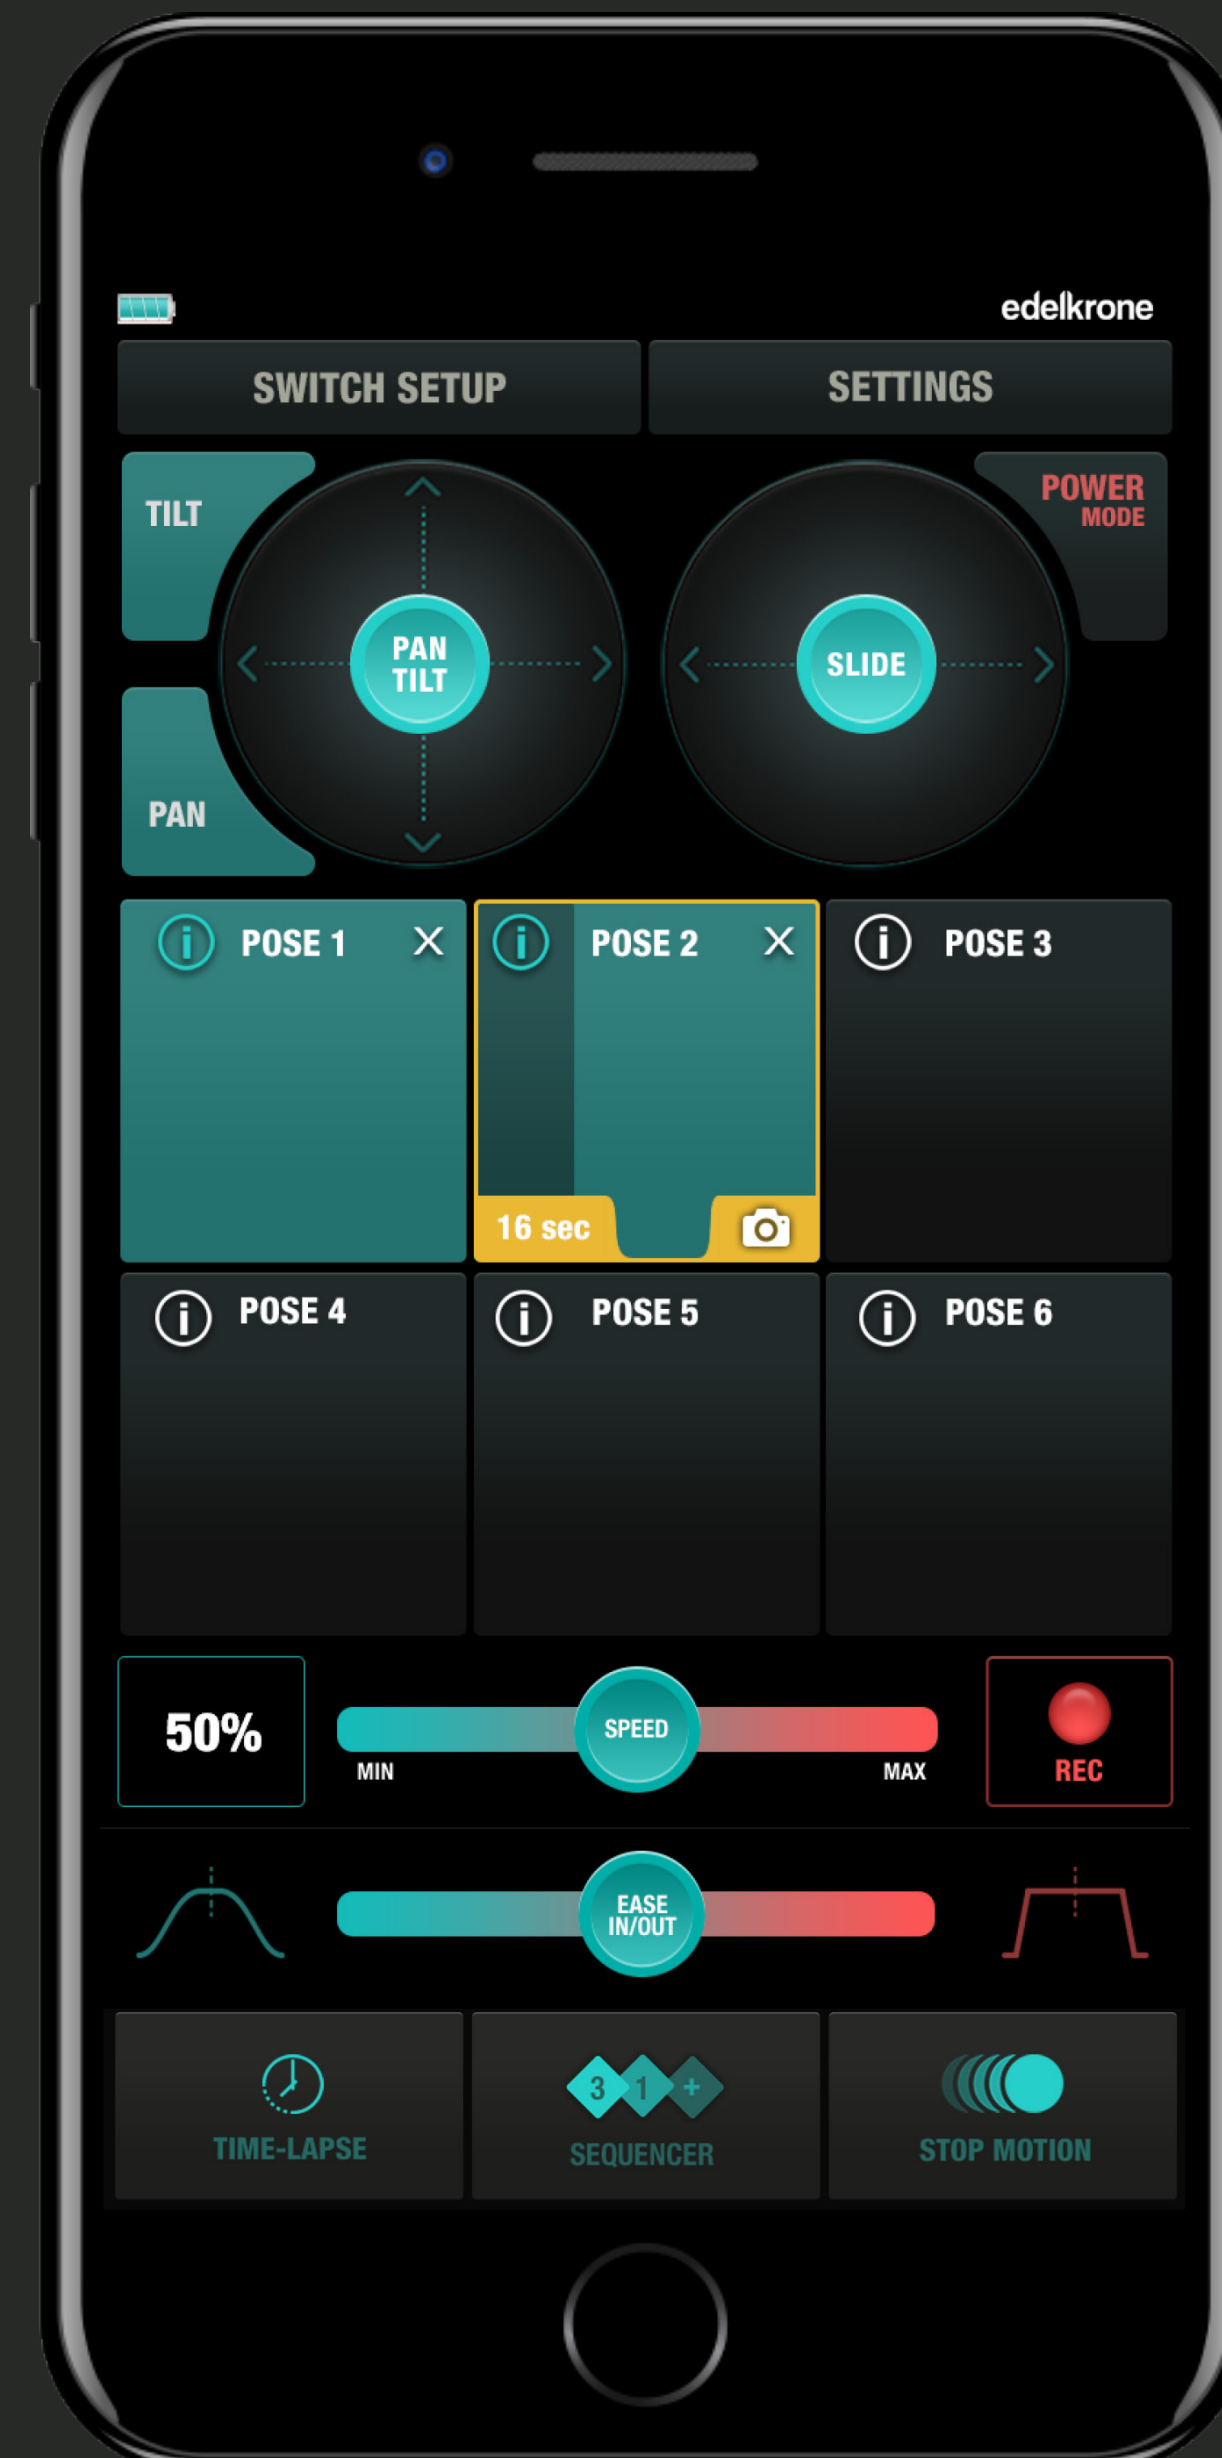

Only Dolly

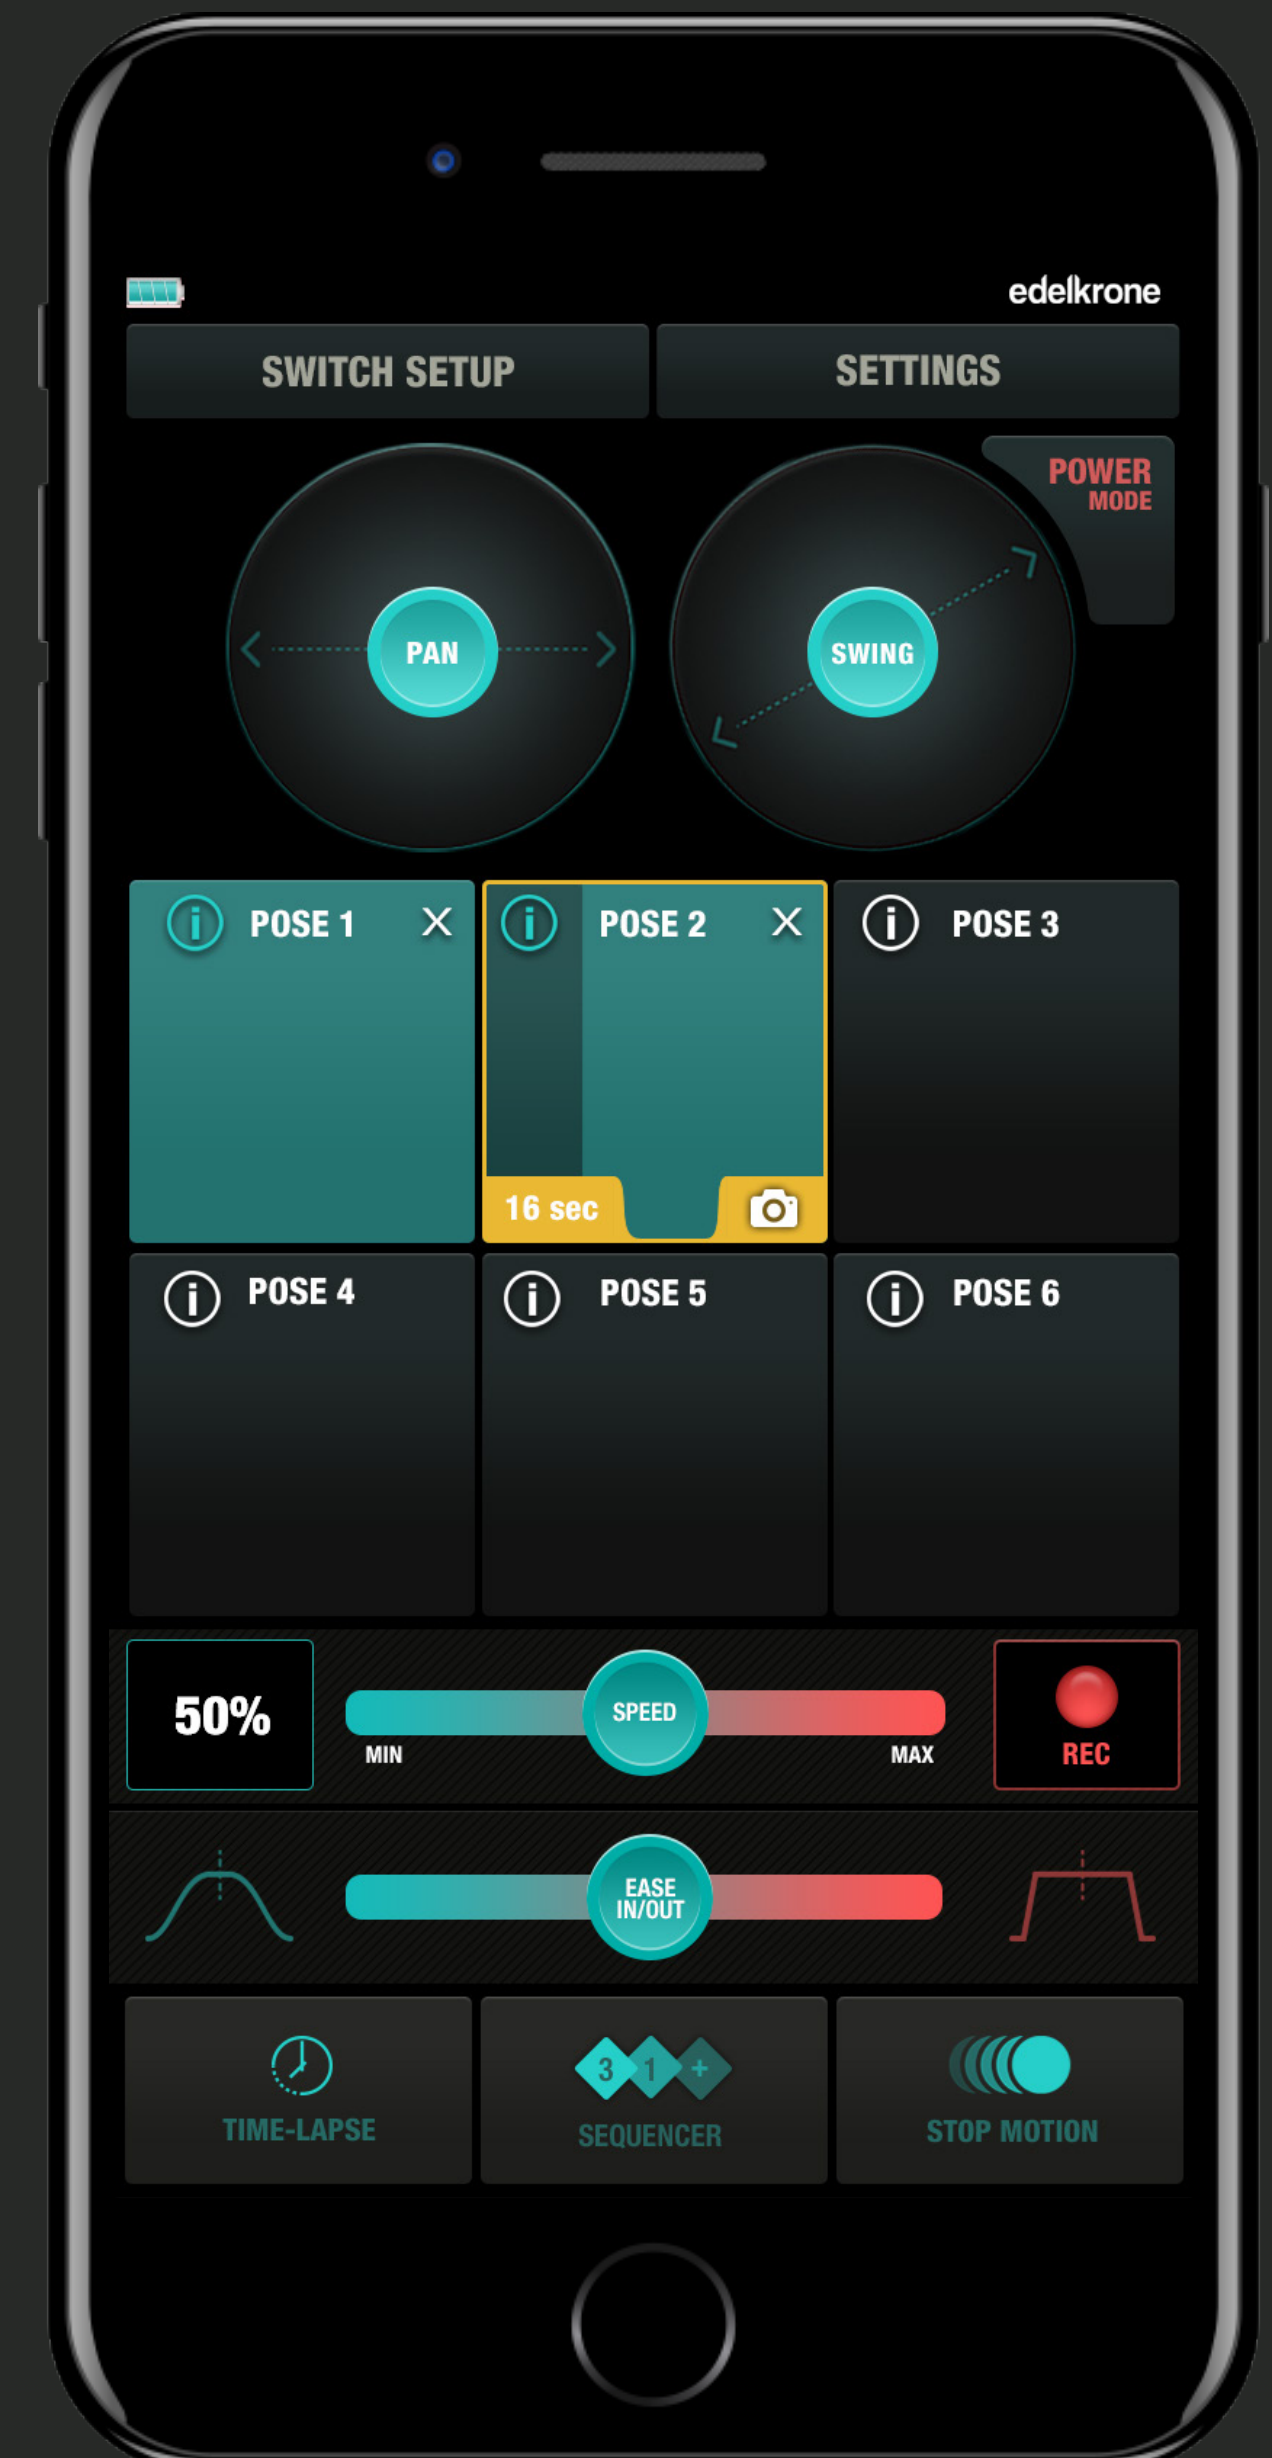

Dual HeadONE

Slide with Dual HeadONE

Jib with a HeadONE

Please see the link for the user manual video of the edelkrone application: <https://youtu.be/ks2y06xHvWU>

TARGET MODE PAGE

Dolly or Slider with HeadPLUS (Only available with HeadPLUS)

- Shift Target is enabled when target is active.
(Joystick turns into red color.)
- Used for re-framing the target
(changes the position of subject in the frame)

- Focus shift is enabled when target is active.
(Knob turns into red color.)
- Used for re-adjusting the sharpness of the target.
(changes the sharpness & saves the new focus adjustment.)
- Double tap to reset focus shift amount.

- Press & hold to save the Target.
(Saves the 3D position of subject in space.)

- If Laser Module is attached, this button will appear.
- Aim at the target with the Laser Module and press Done.

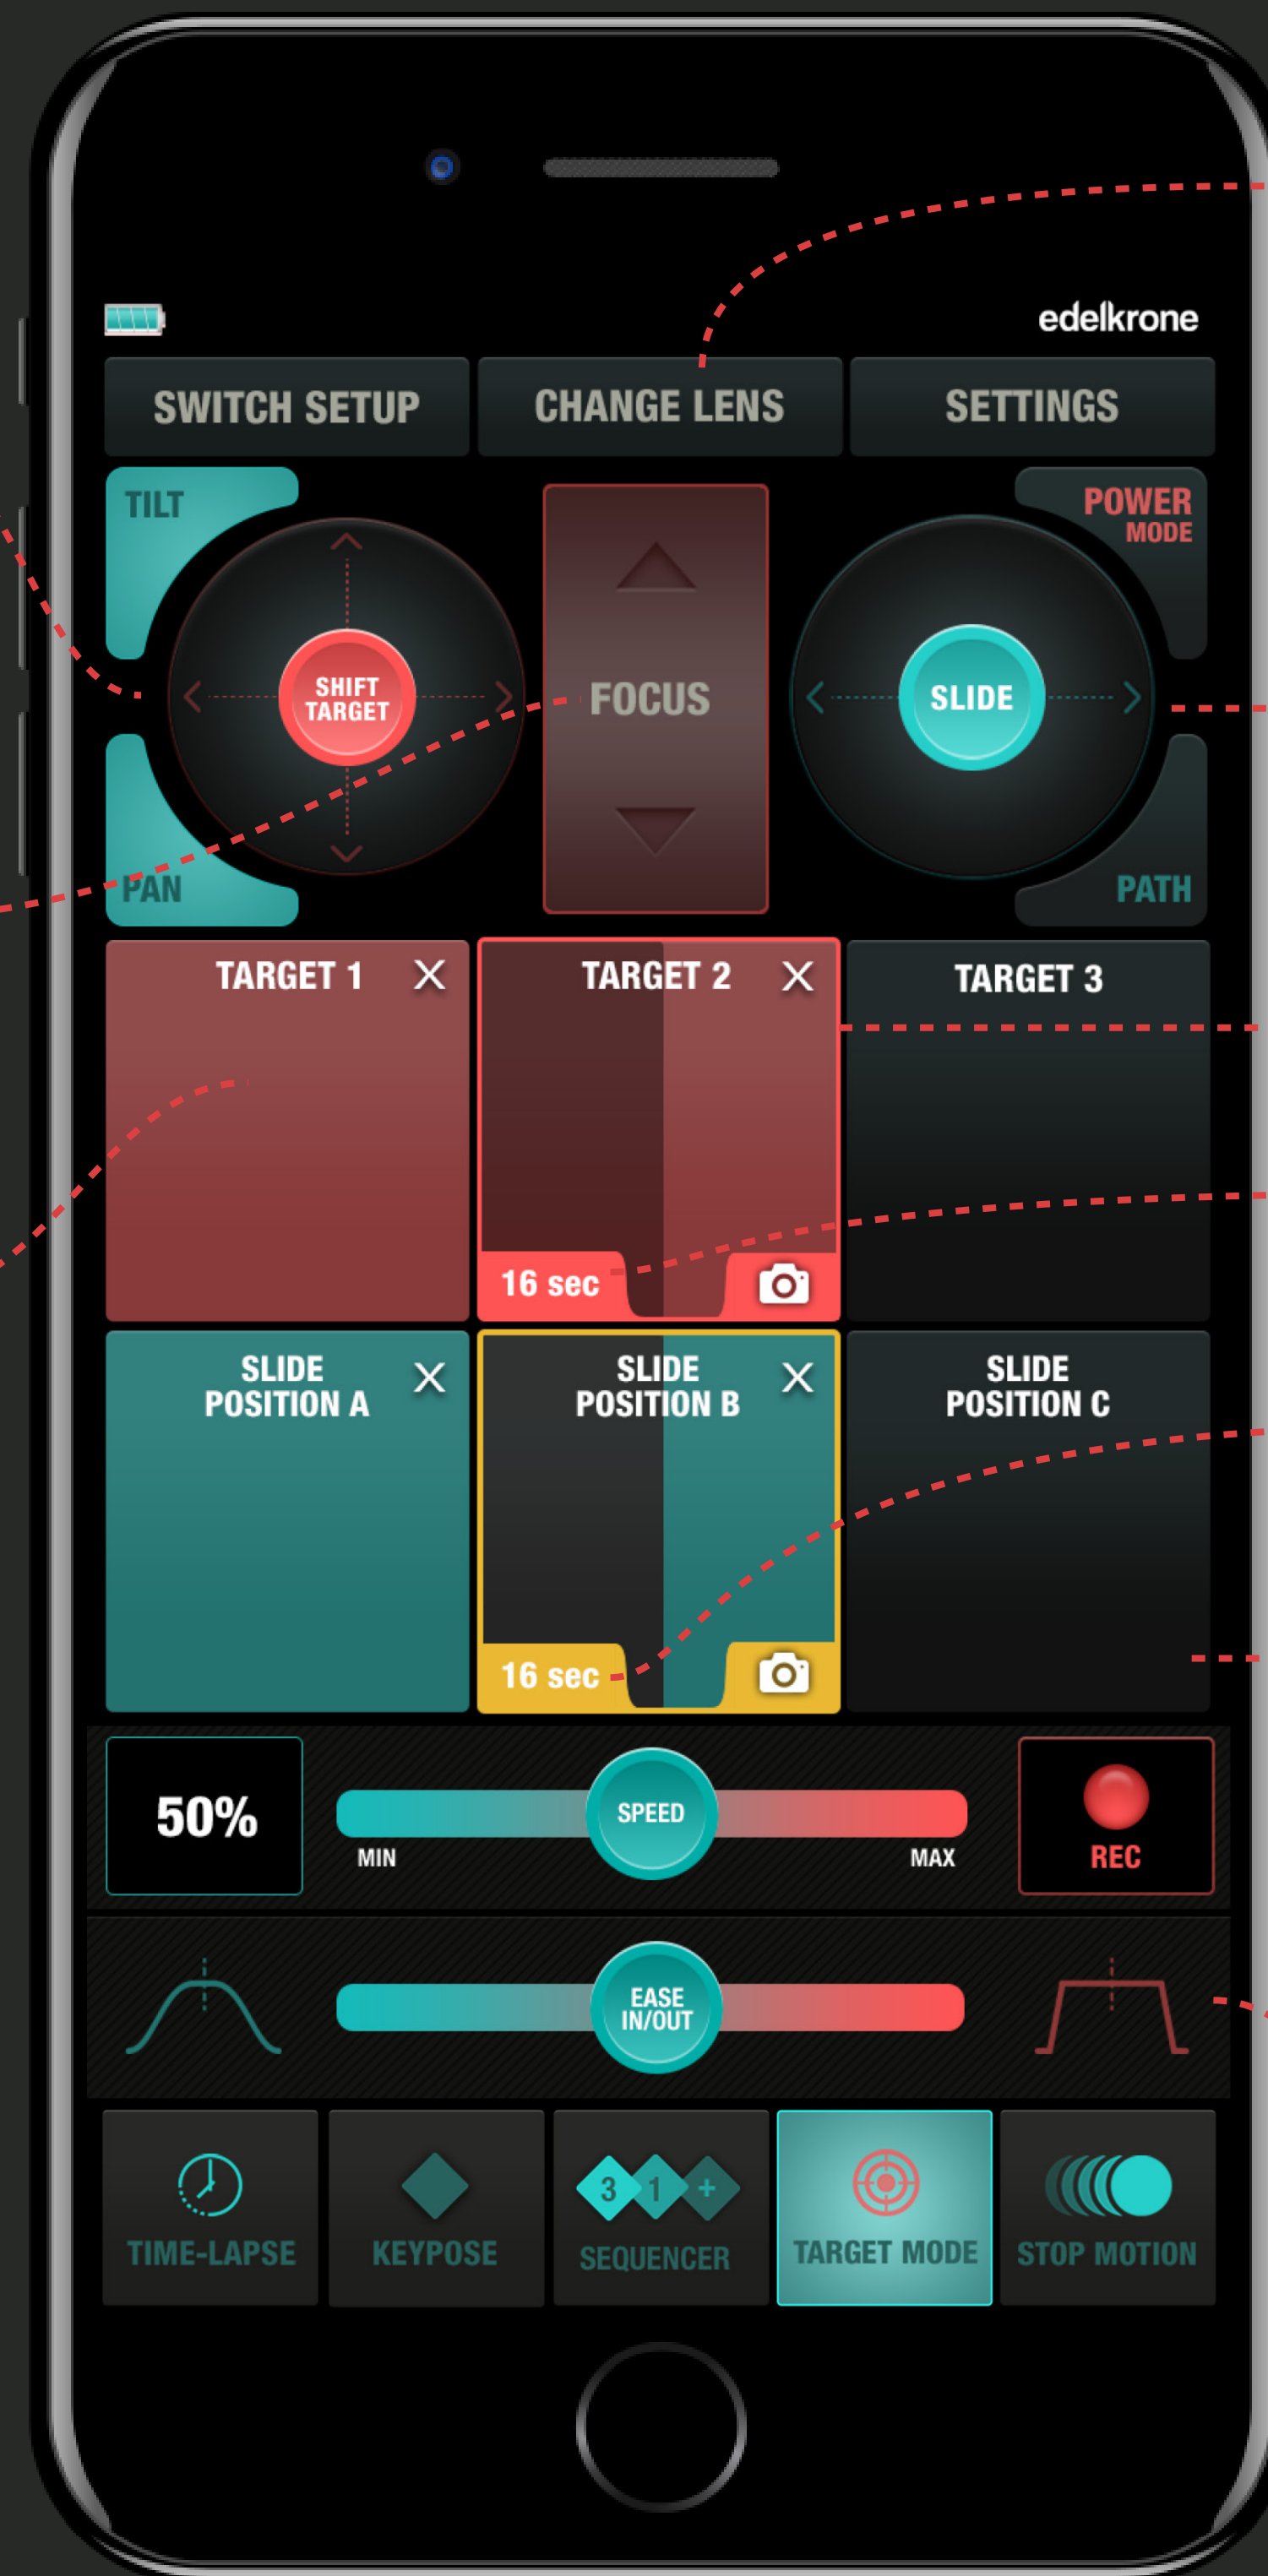

- If Laser Module is not attached, first aim at the target then press & hold to "Target Button". Afterwards, this button will appear.
- Then, slide the camera away from its current position & re-aim at the same target with the camera and press Done.

- Press to recall the Target.

- Double tap to any Target button to recall the target without considering speed & ease in/out adjustments.

Use this button when you change the lens on your camera.

This button appears when Dolly is manually moved from its path. Tap to bring system back to the created path.

- Red frame indicates that target is selected & active.
- Yellow frame indicates that transition is in progress.

Shows the duration of target transition operation.

Shows the duration of slide operation.

- Press & hold to save the Slide Position.
- Press to slide to the chosen position.
- Double tap to any Slide Position button to recall the Slide Position without considering speed & ease in/out adjustments.
- To activate Loop Mode, press any two of the Slide Position buttons at the same time with two fingers.

- Speed & Ease In/Out adjustments affect the operation which is initiated after adjustment is done.
- Different Speed & Ease In/Out adjustments can be used for slide and target transition operations.

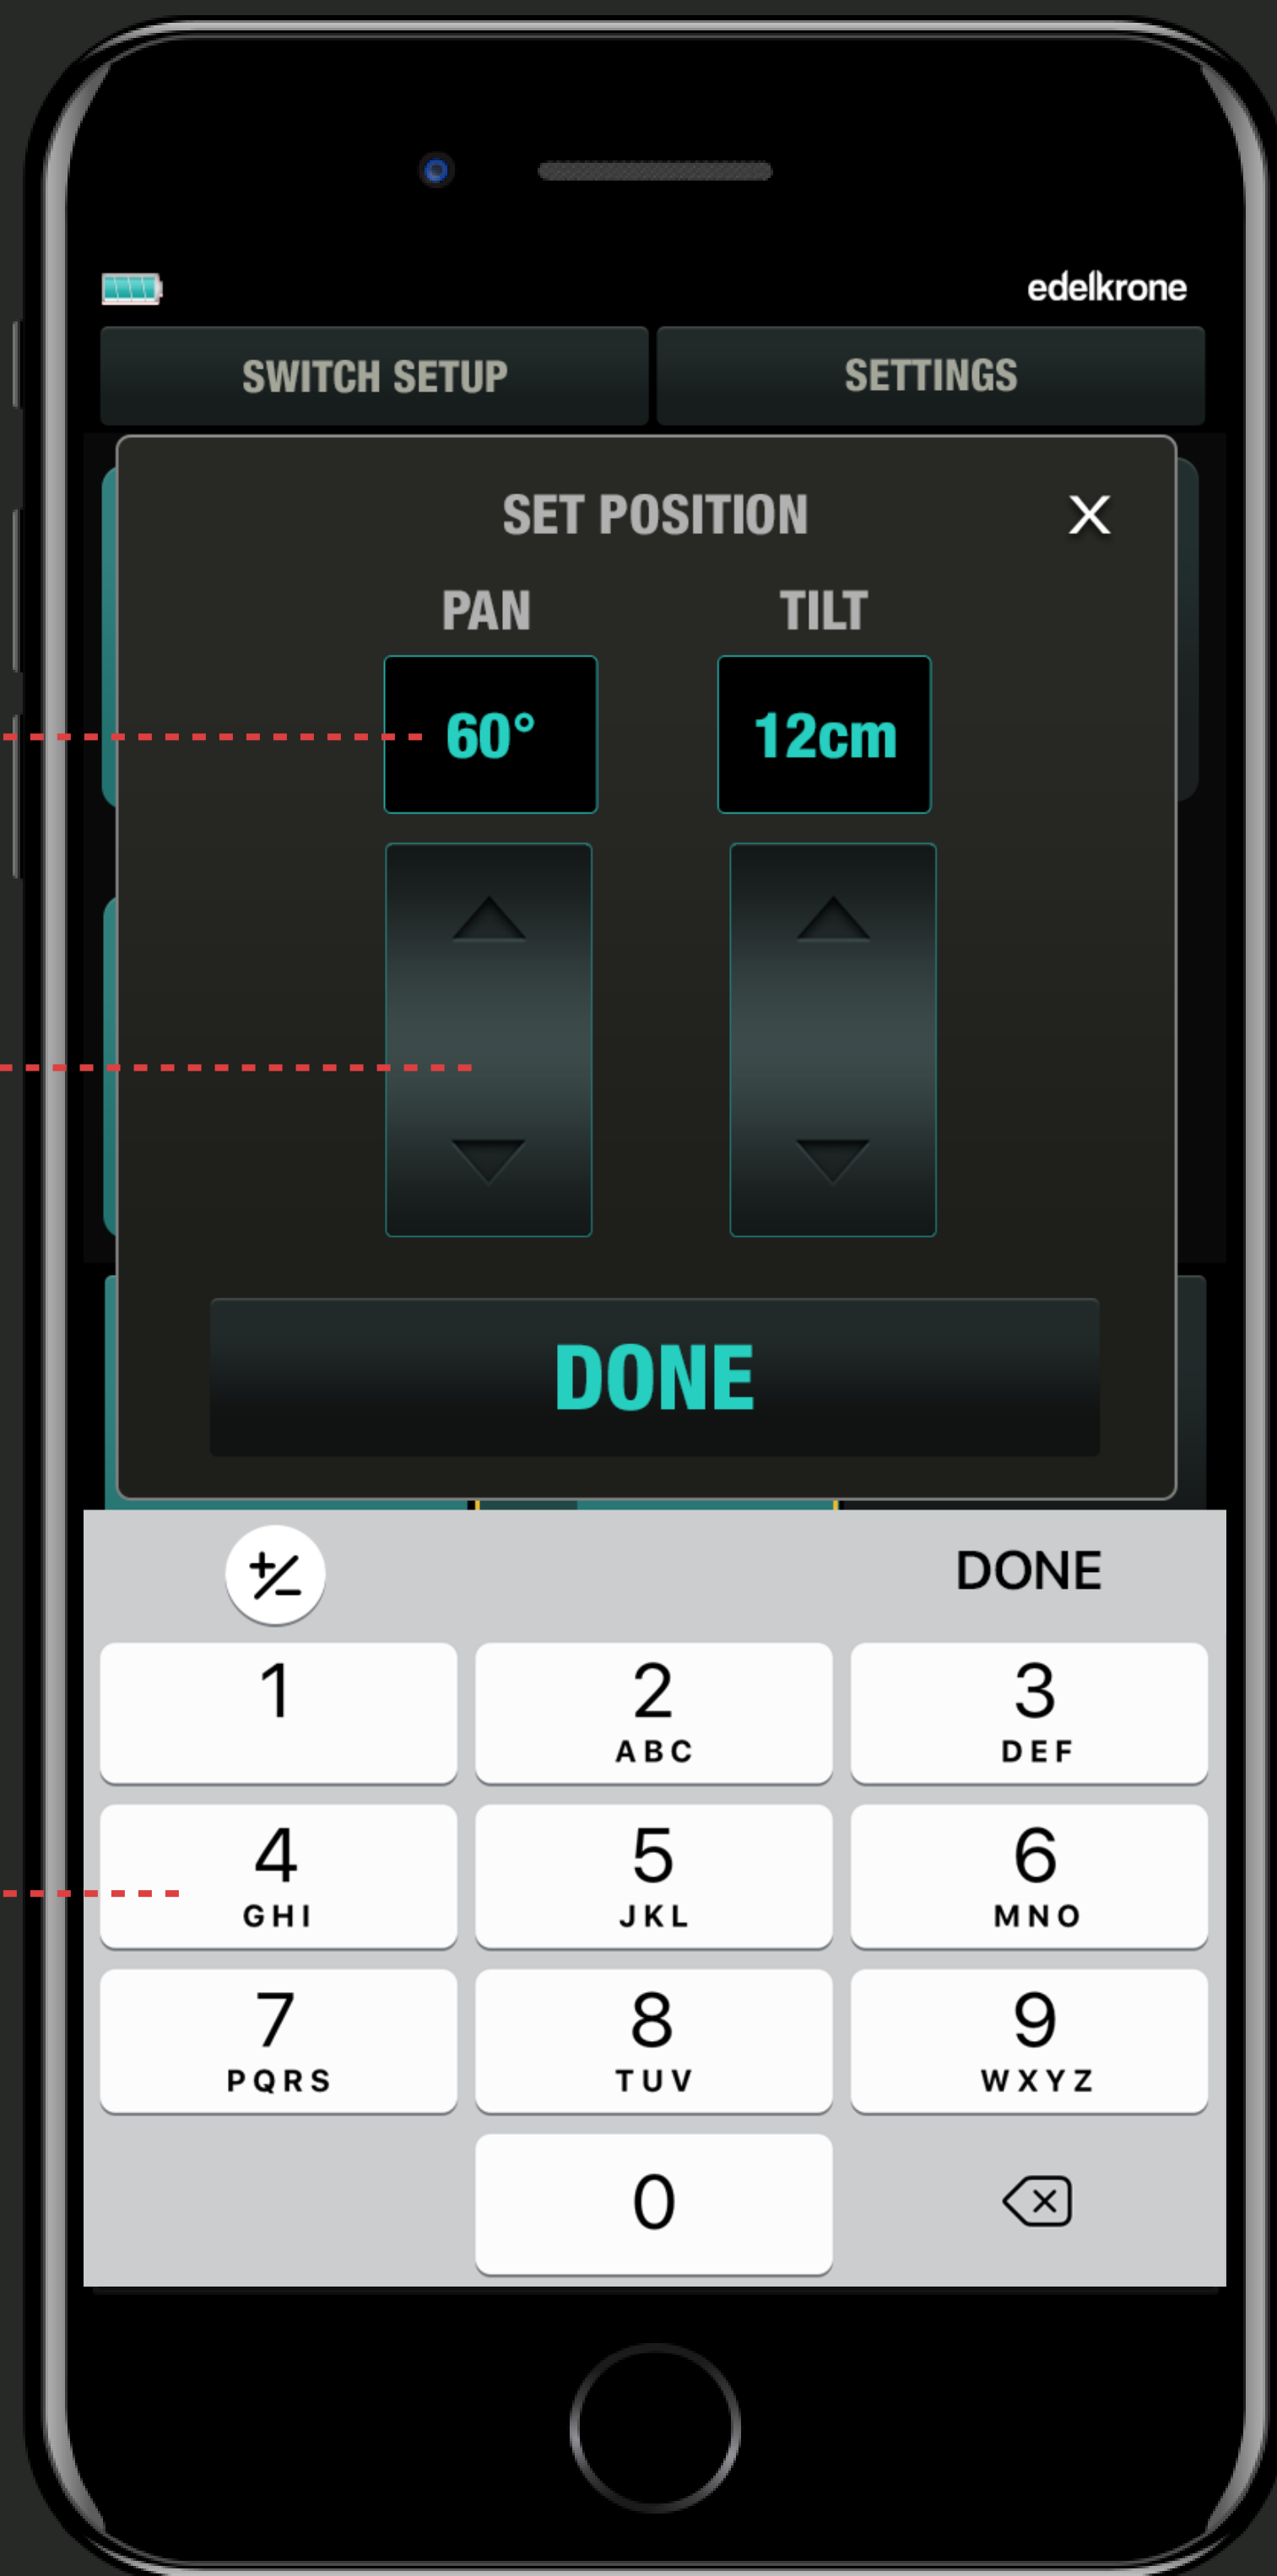

Please see the link for the user manual video of the Target Mode: <https://youtu.be/IW8WHWfepfE?t=475>

NUMERIC CONTROL

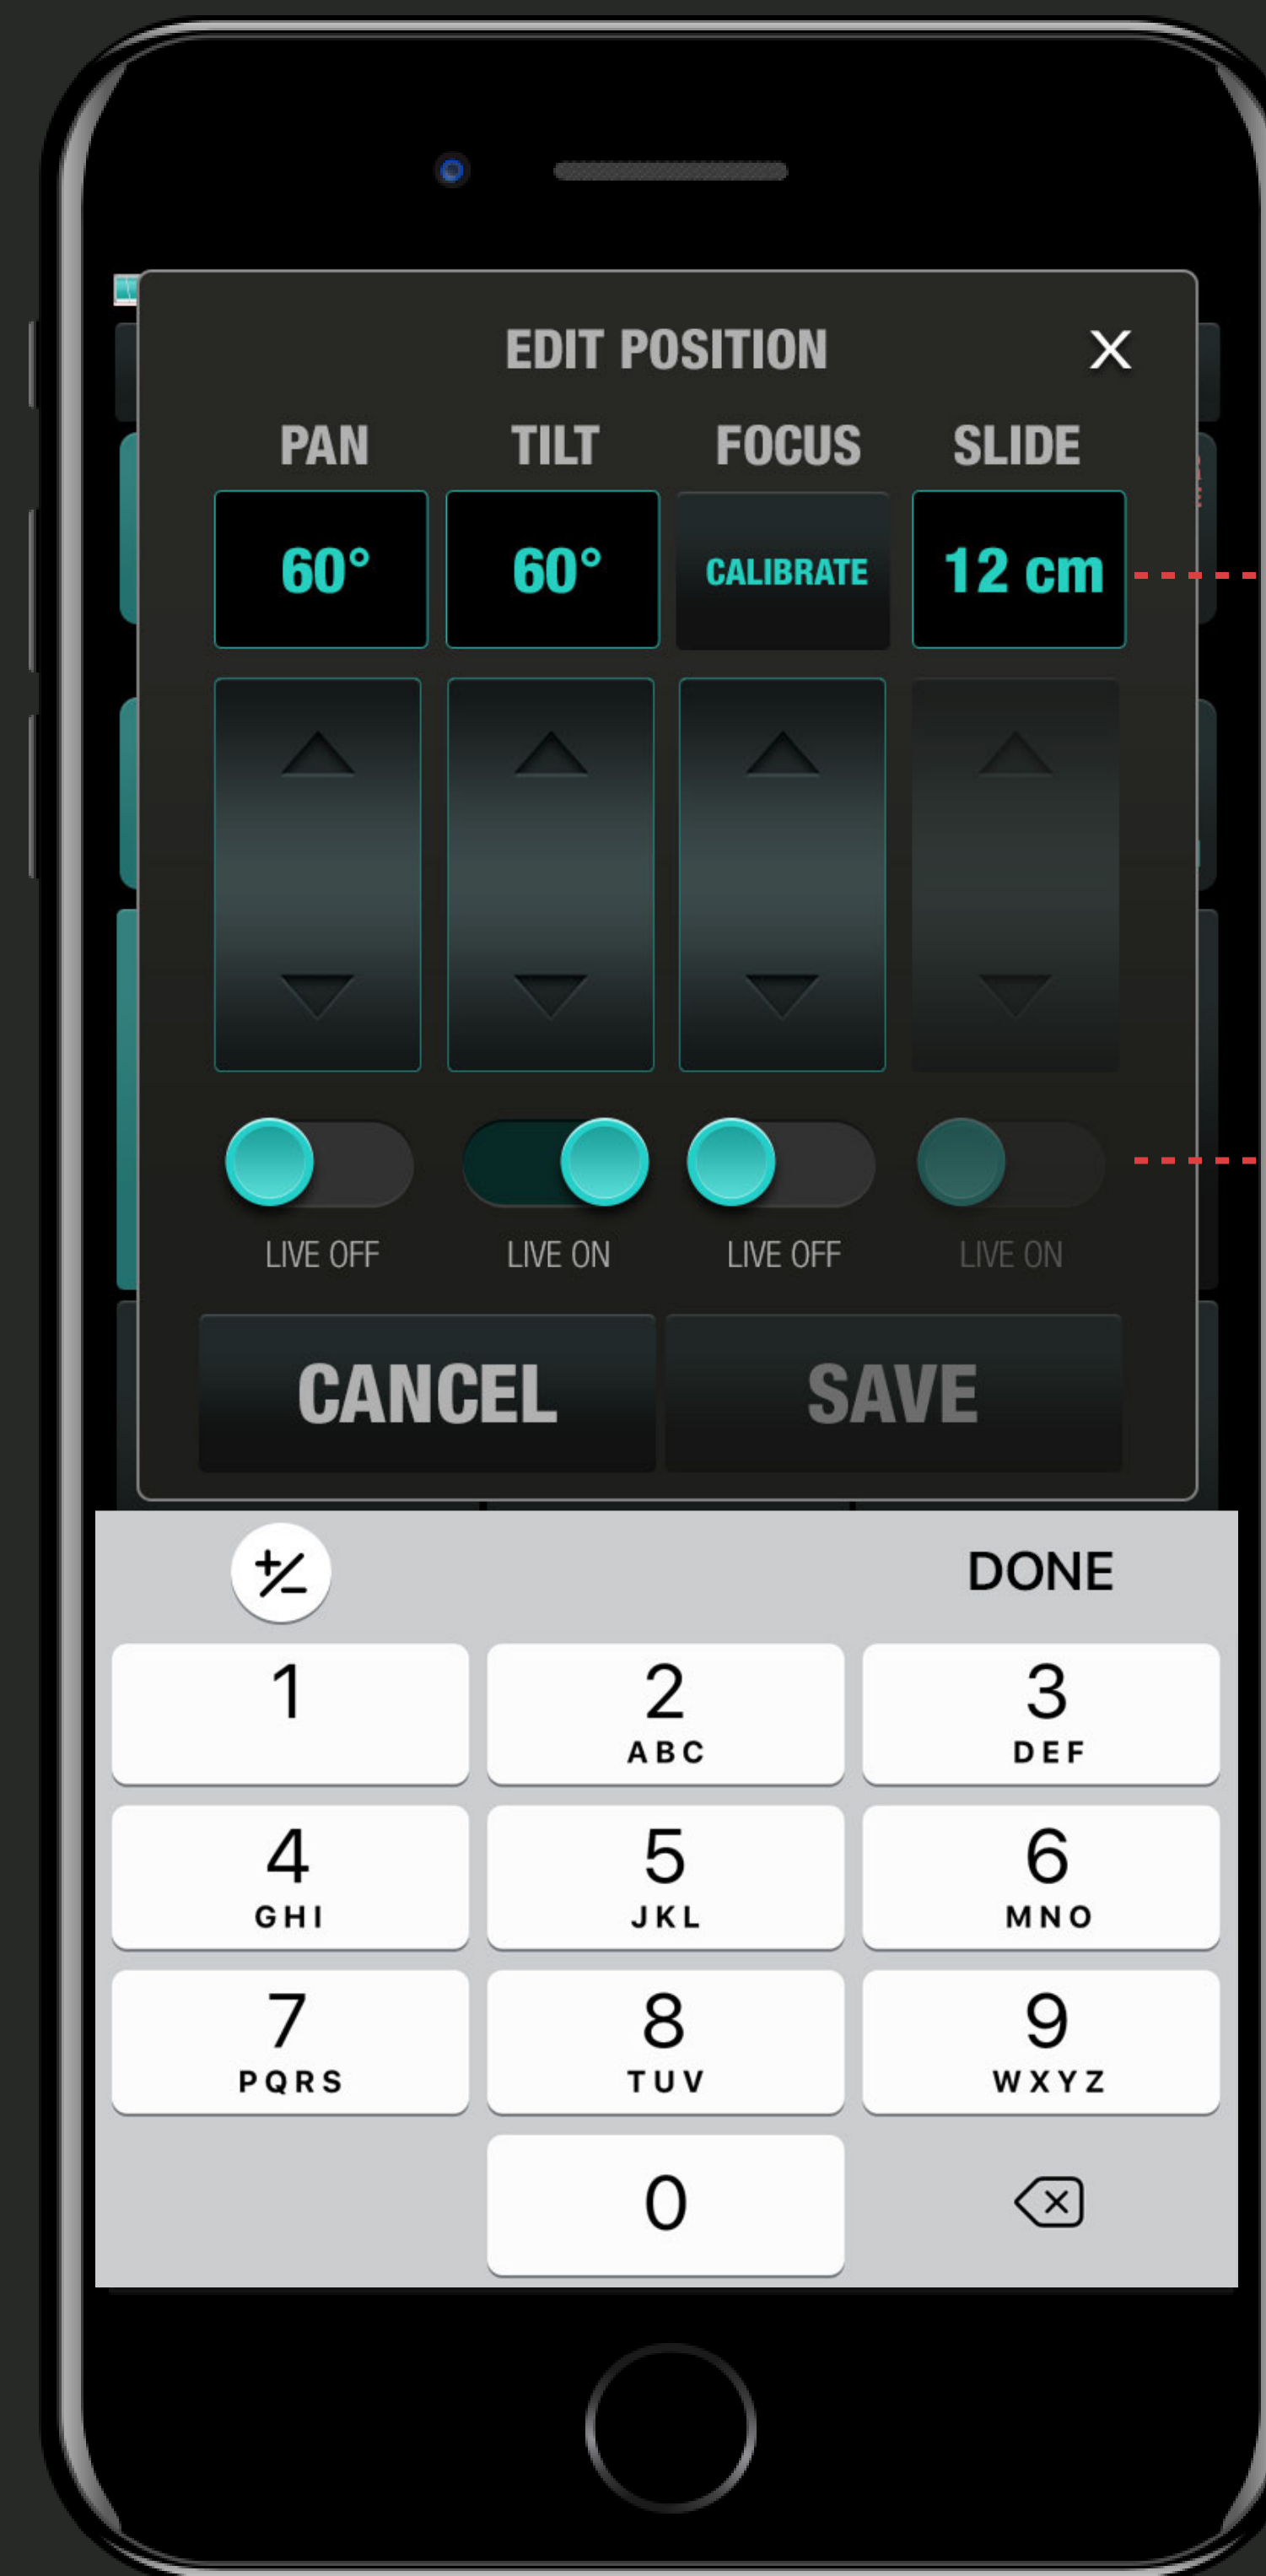

Numeric Control Panel for Setting & Editing Positions

Tap & set to adjust the referred axis' position or angle.

Or, Press & scroll to adjust position or angle.

You may use the keyboard to set positions or angles.

If any axis is not calibrated, please press Calibrate button.

Live On : You will be able to see the updates simultaneously.

Live Off : Numeric entry will be saved but system will not show updates simultaneously.

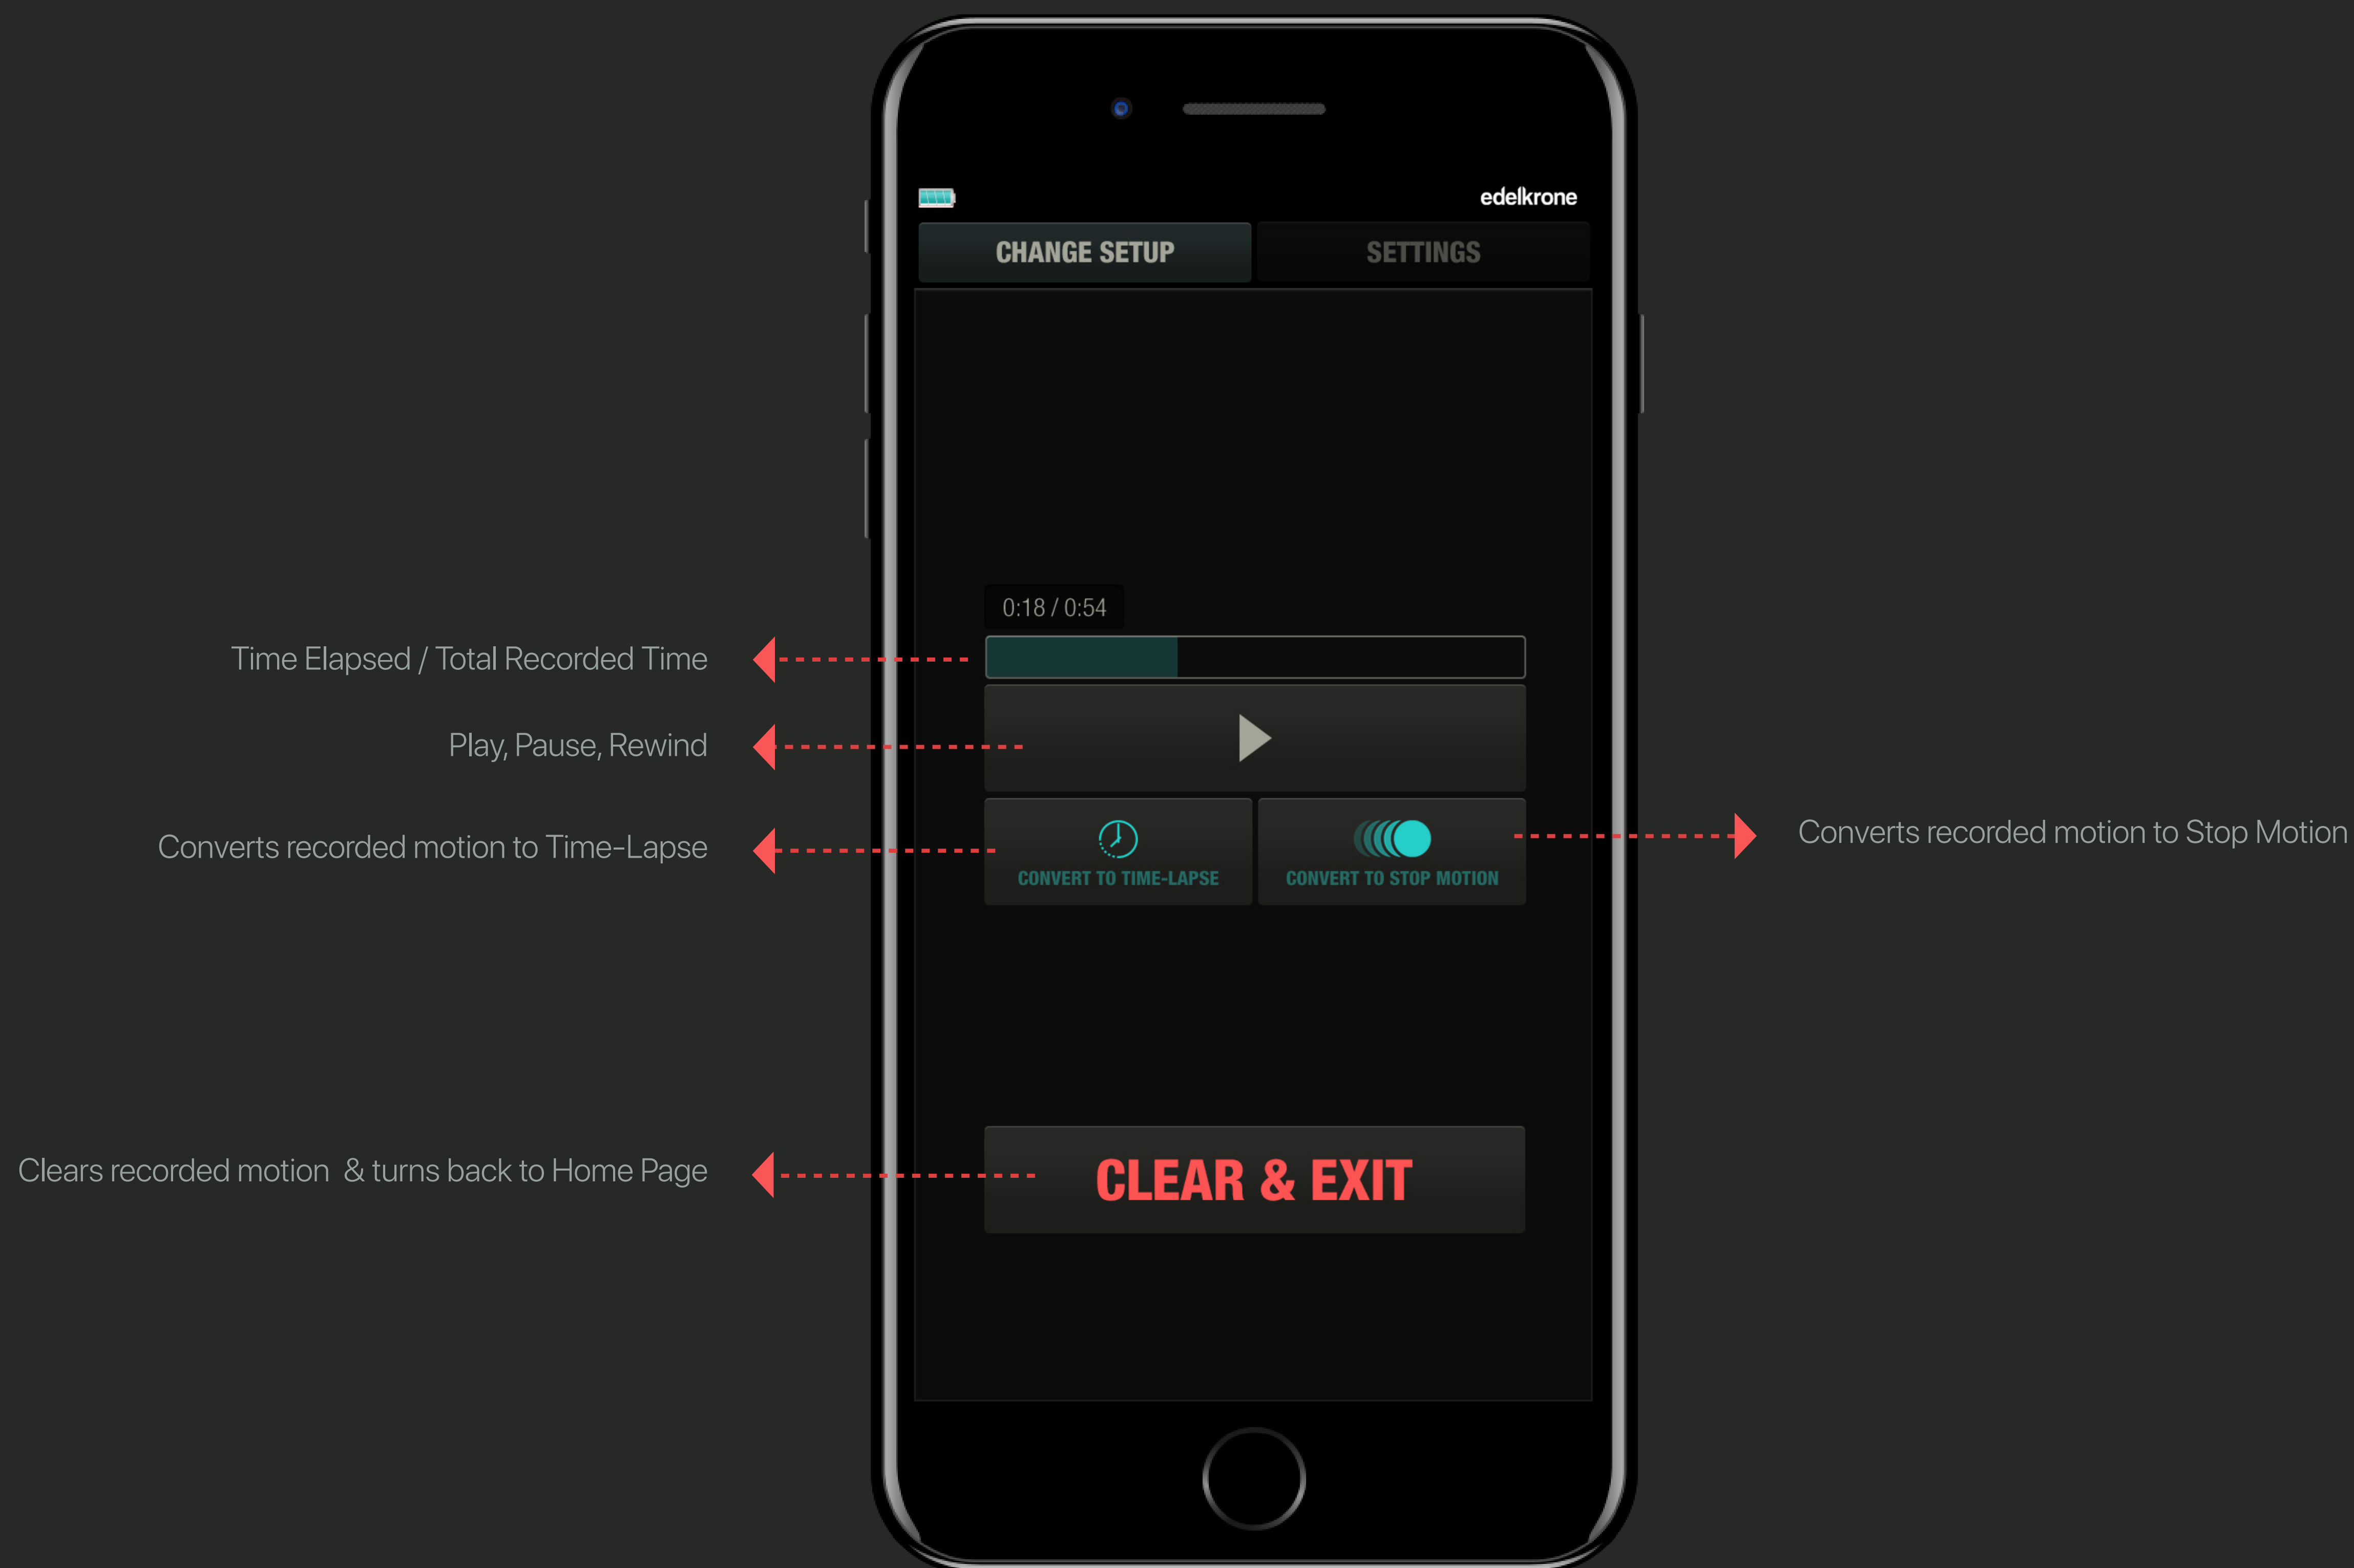

Please see the link for the user manual video of the Numeric Control: <https://youtu.be/rHn71j7ZcMo>

RECORD PAGE

User Guide

Record button is for activating the Record feature. In order to clarify, while using Record feature, system does not send signal to your camera to record a video.

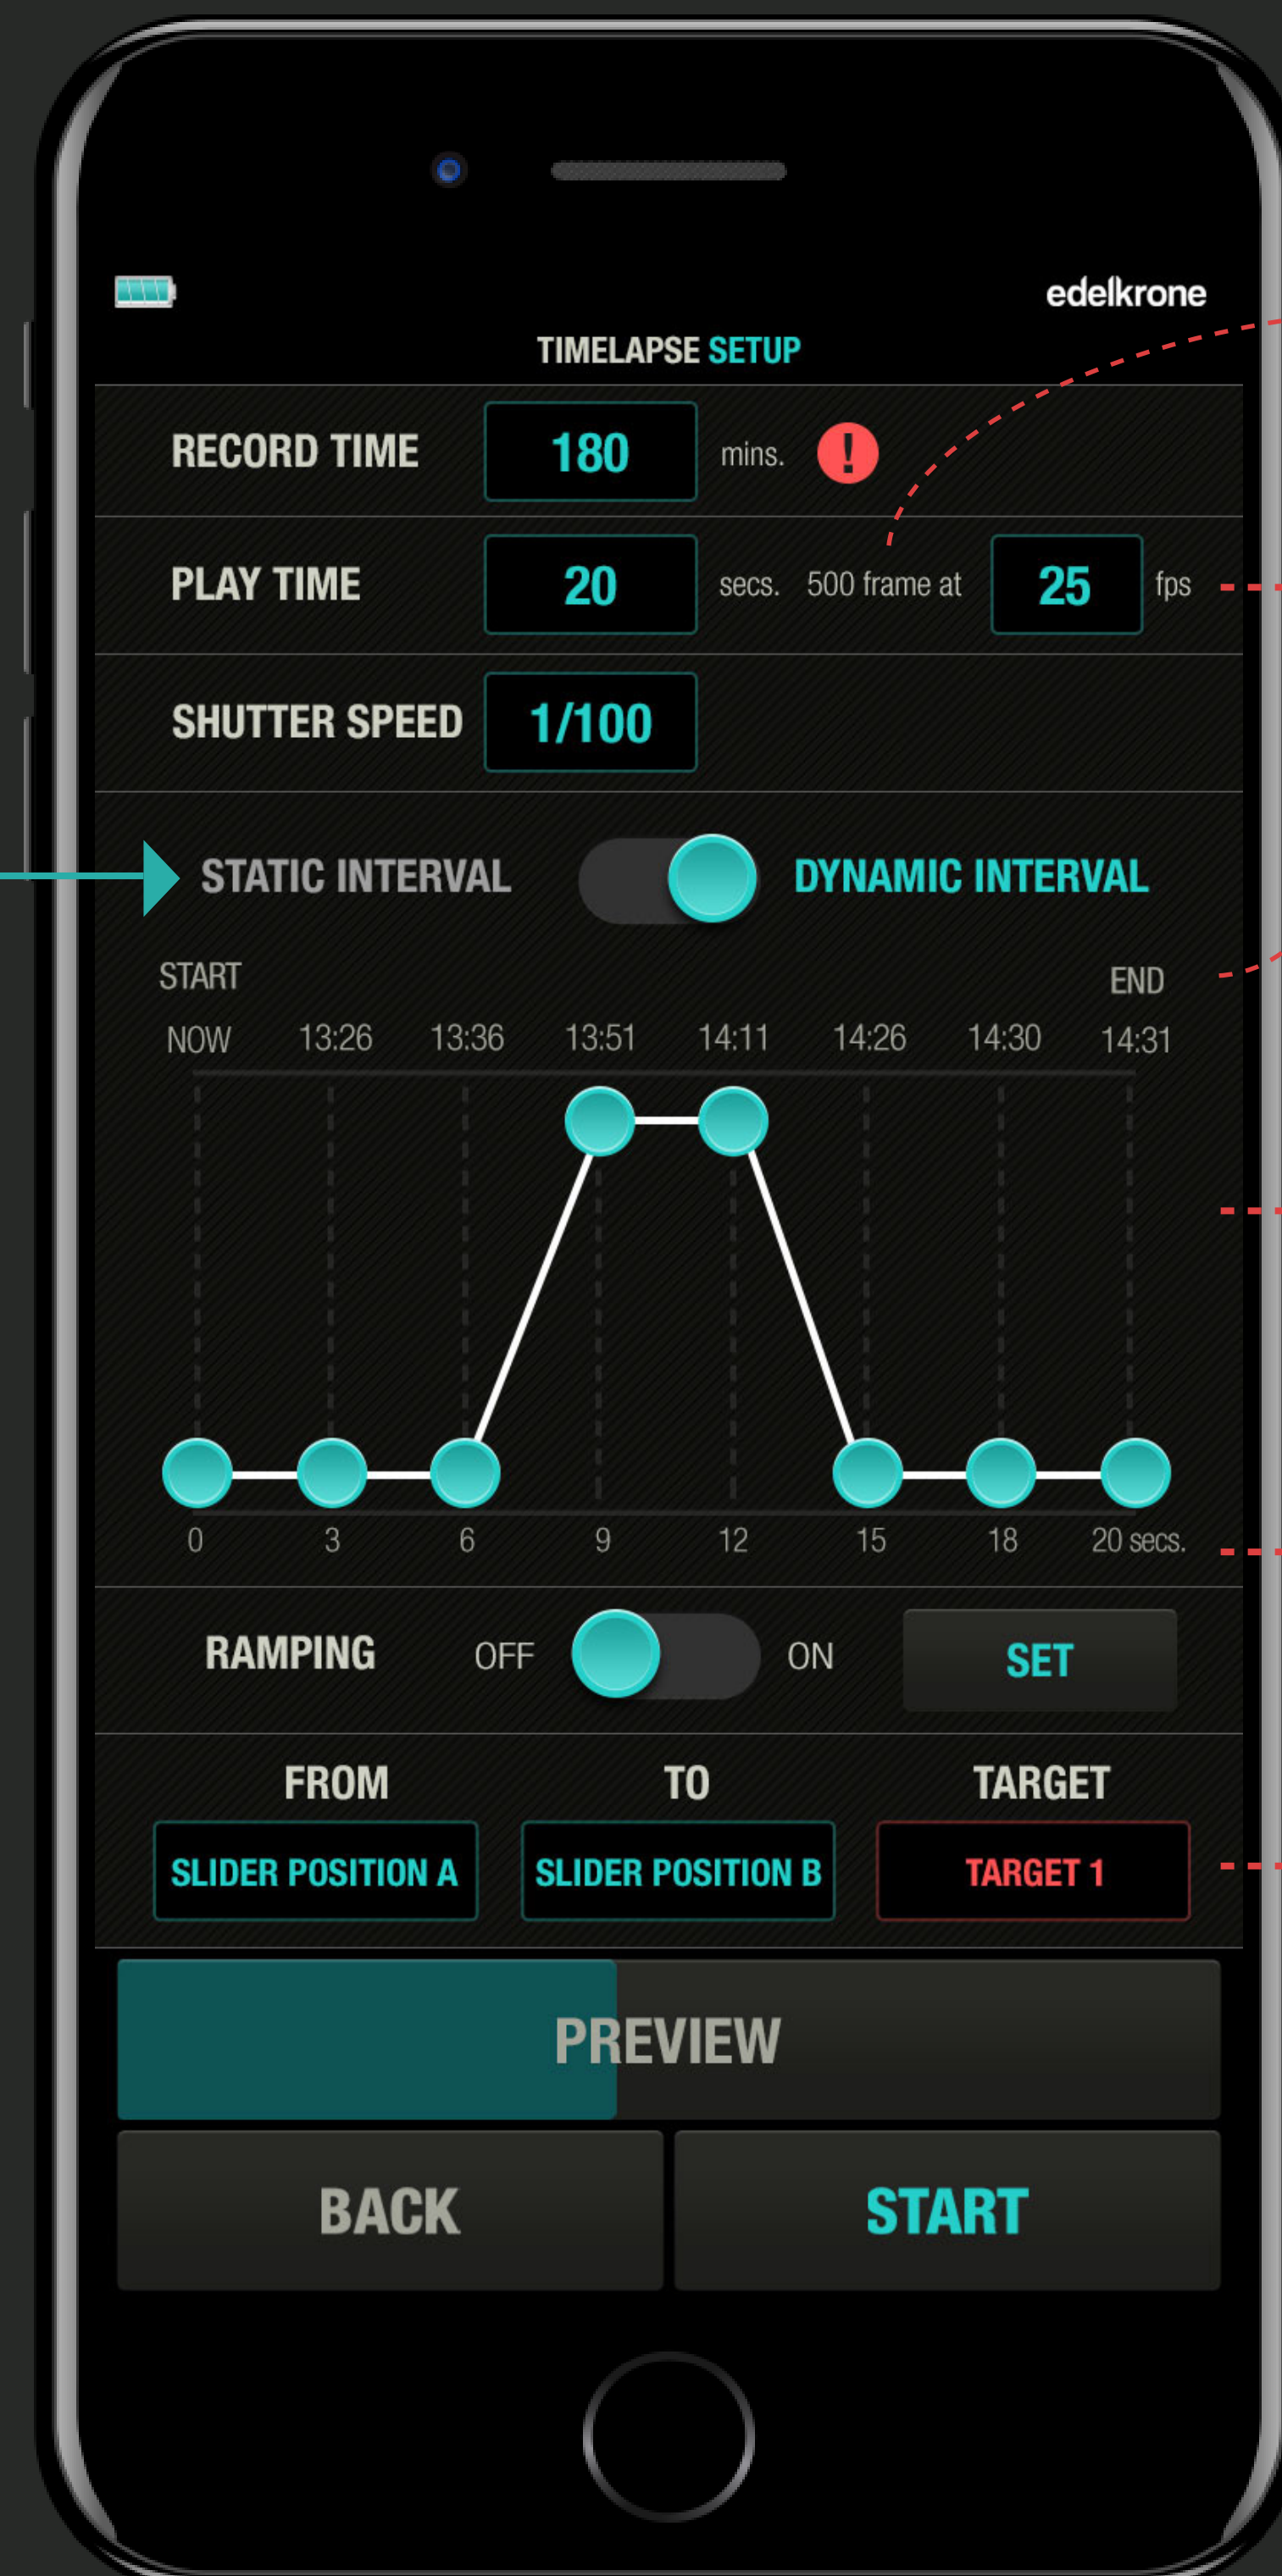

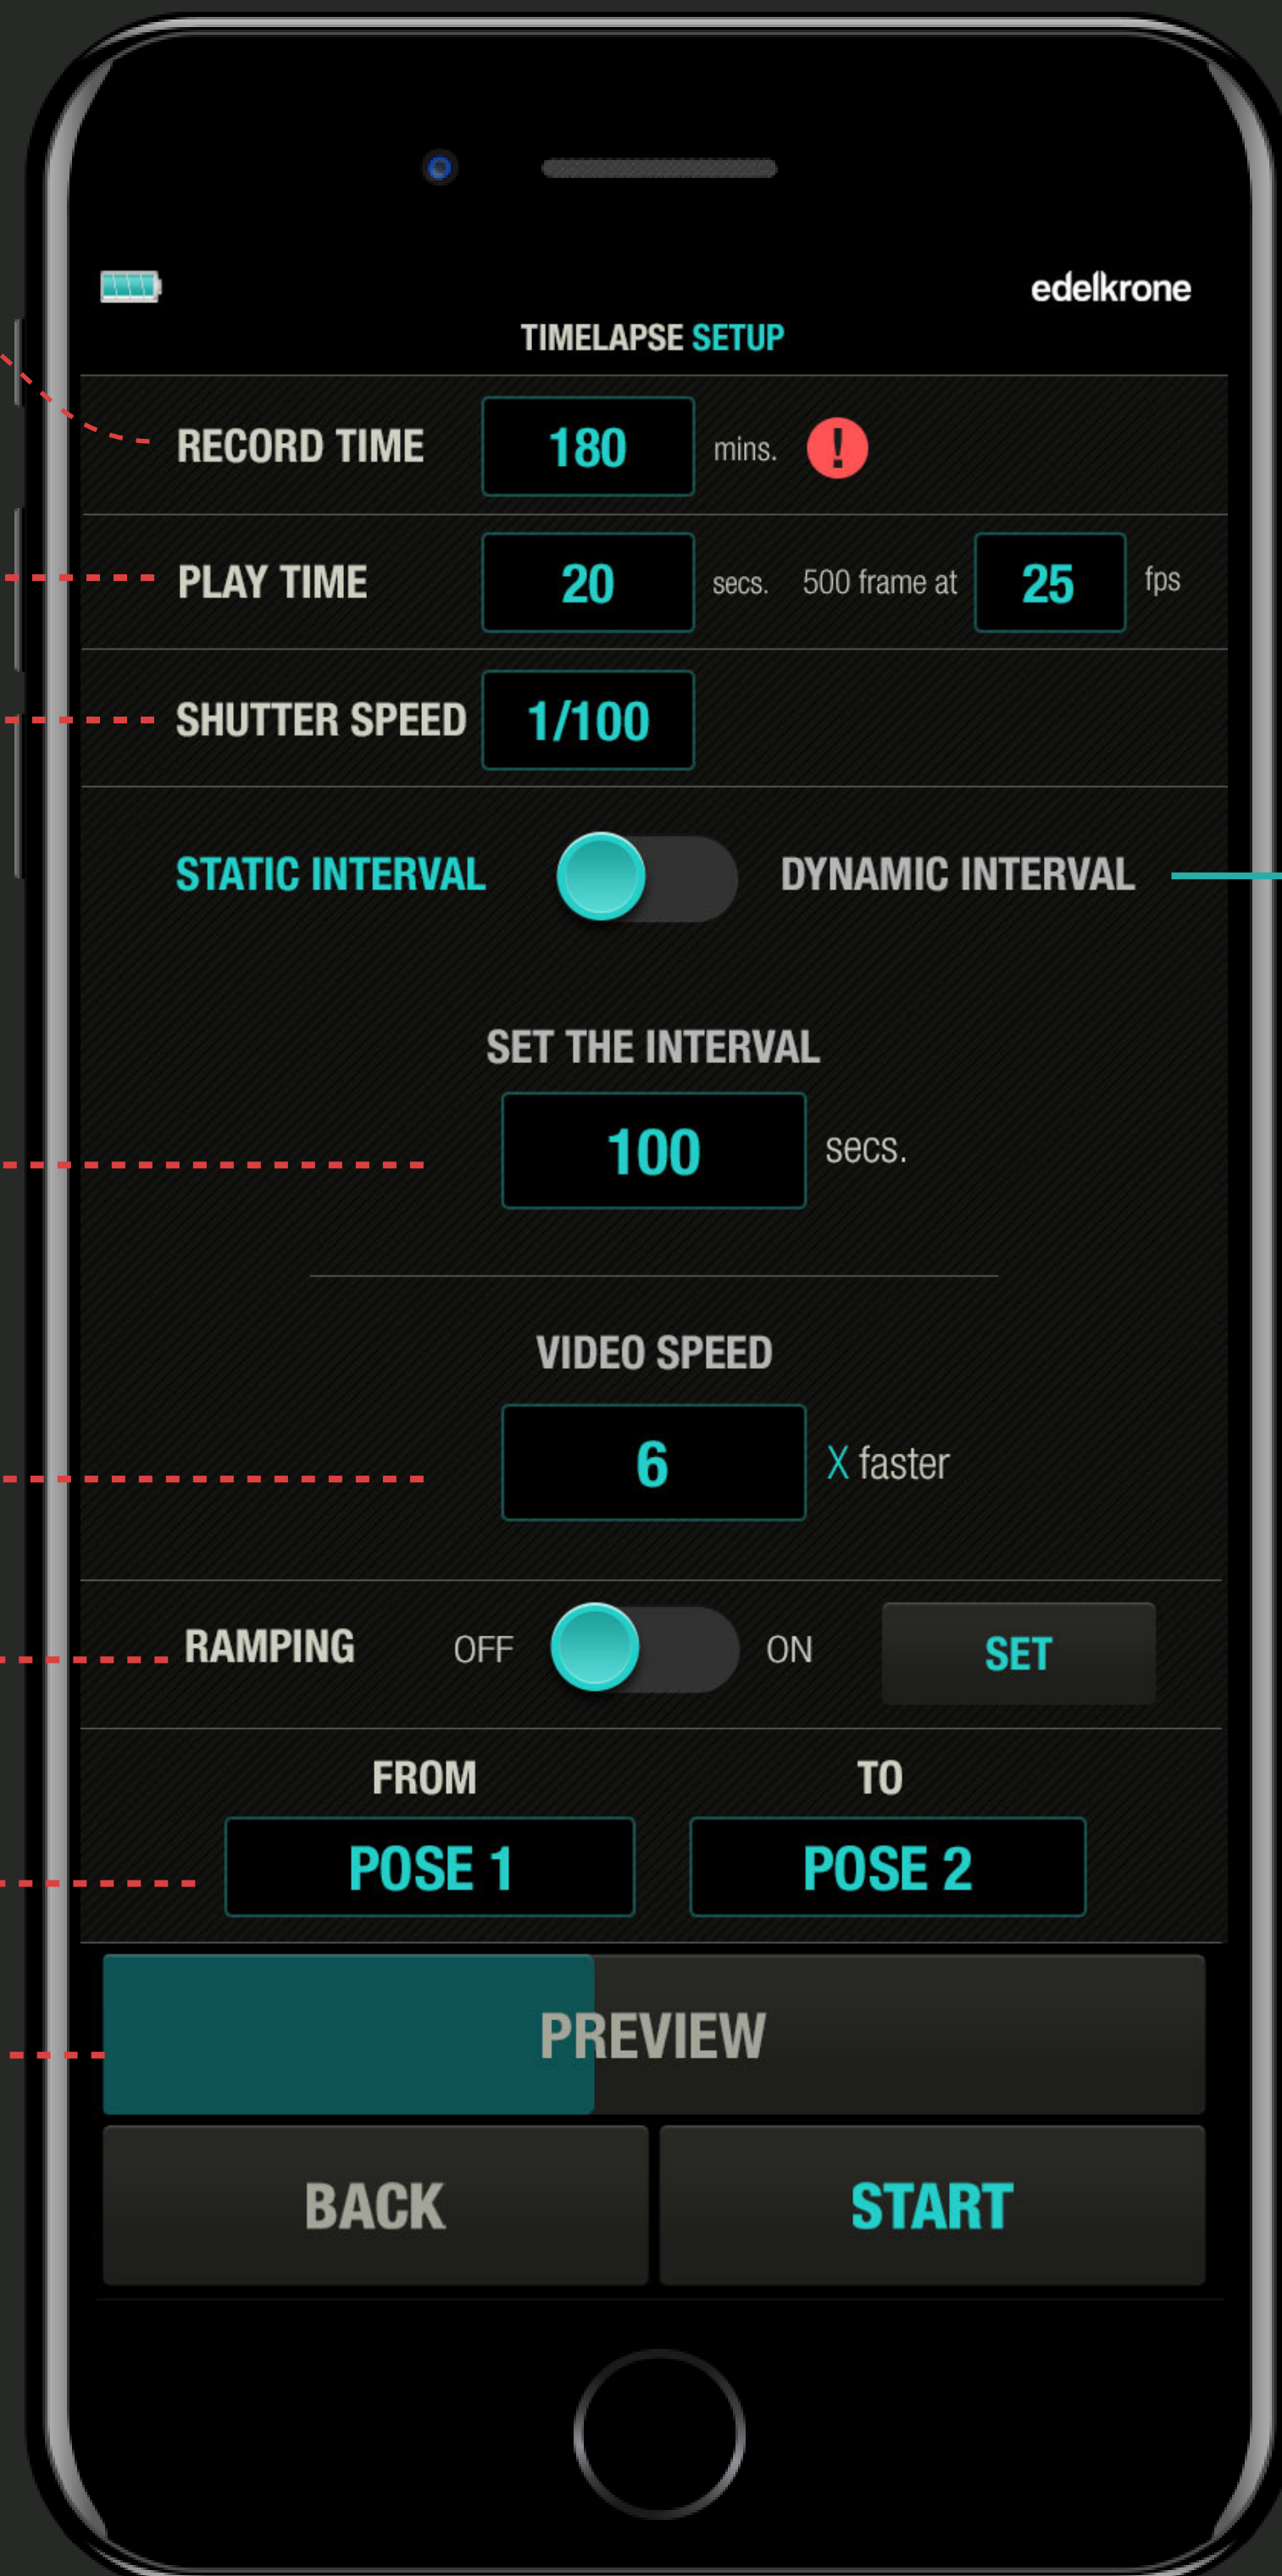

Please see the link for the user manual video of the Record feature: https://youtu.be/vHu5cK6SH_0

TIMELAPSE SETUP / PAGE I

Static & Dynamic Interval

Sets the Record Time of Time-Lapse. (Total Time-Lapse duration)

Sets the Play Time. (Final Time-Lapse video duration.)

Please choose the shutter speed of your camera for better Record Time estimation.

Sets the interval duration between each frame.

Shows video speed for this setup

Ramping settings.

Sets Start & Finish positions.

Preview of the camera motion in final Time-Lapse video.

Frame count will be updated automatically in light of Record Time, Play Time, Fps & Interval.

Please choose the fps value that you use while creating Time-Lapse.

Time stamps.

Interval will be higher when the graph is swiped upwards & will be lower when the graph is swiped downwards. (Please see the link to discover Dynamic Interval: <https://youtu.be/zKPnJWRLAUY>)

Frame stamps.

Target appears if Time-Lapse is started from Target Mode & choose the target that will be followed.

STOP MOTION SETUP PAGE

Setup & Progress Page

Sets the play time & fps of the production. Total frame automatically generates itself.

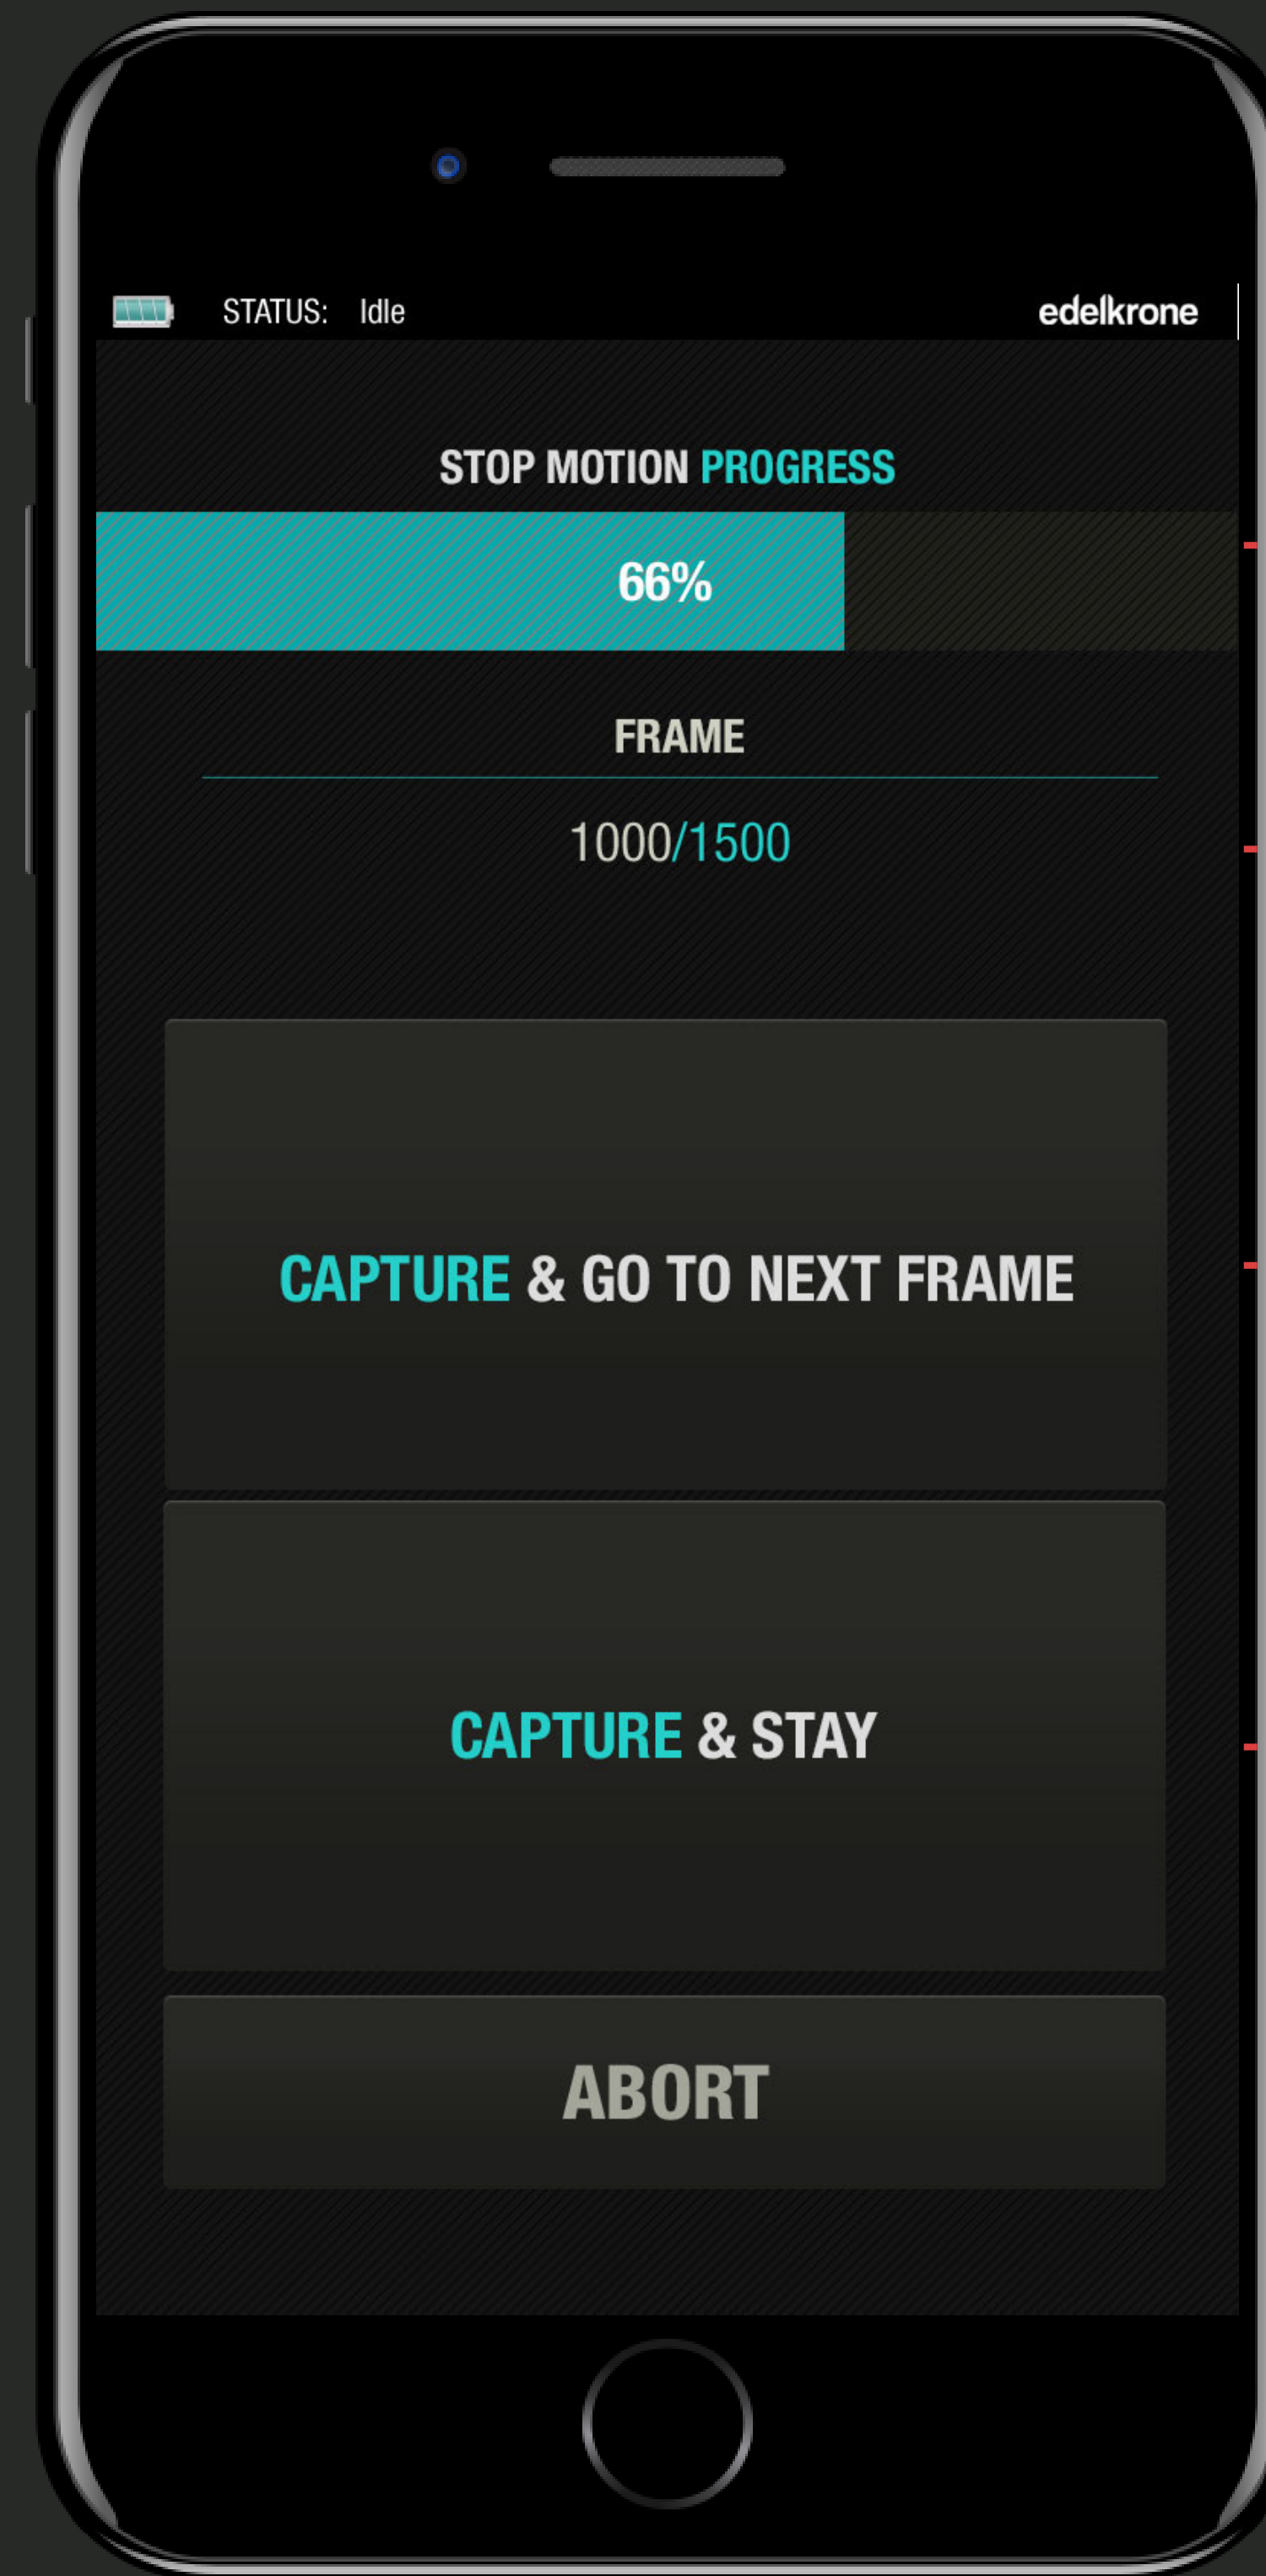

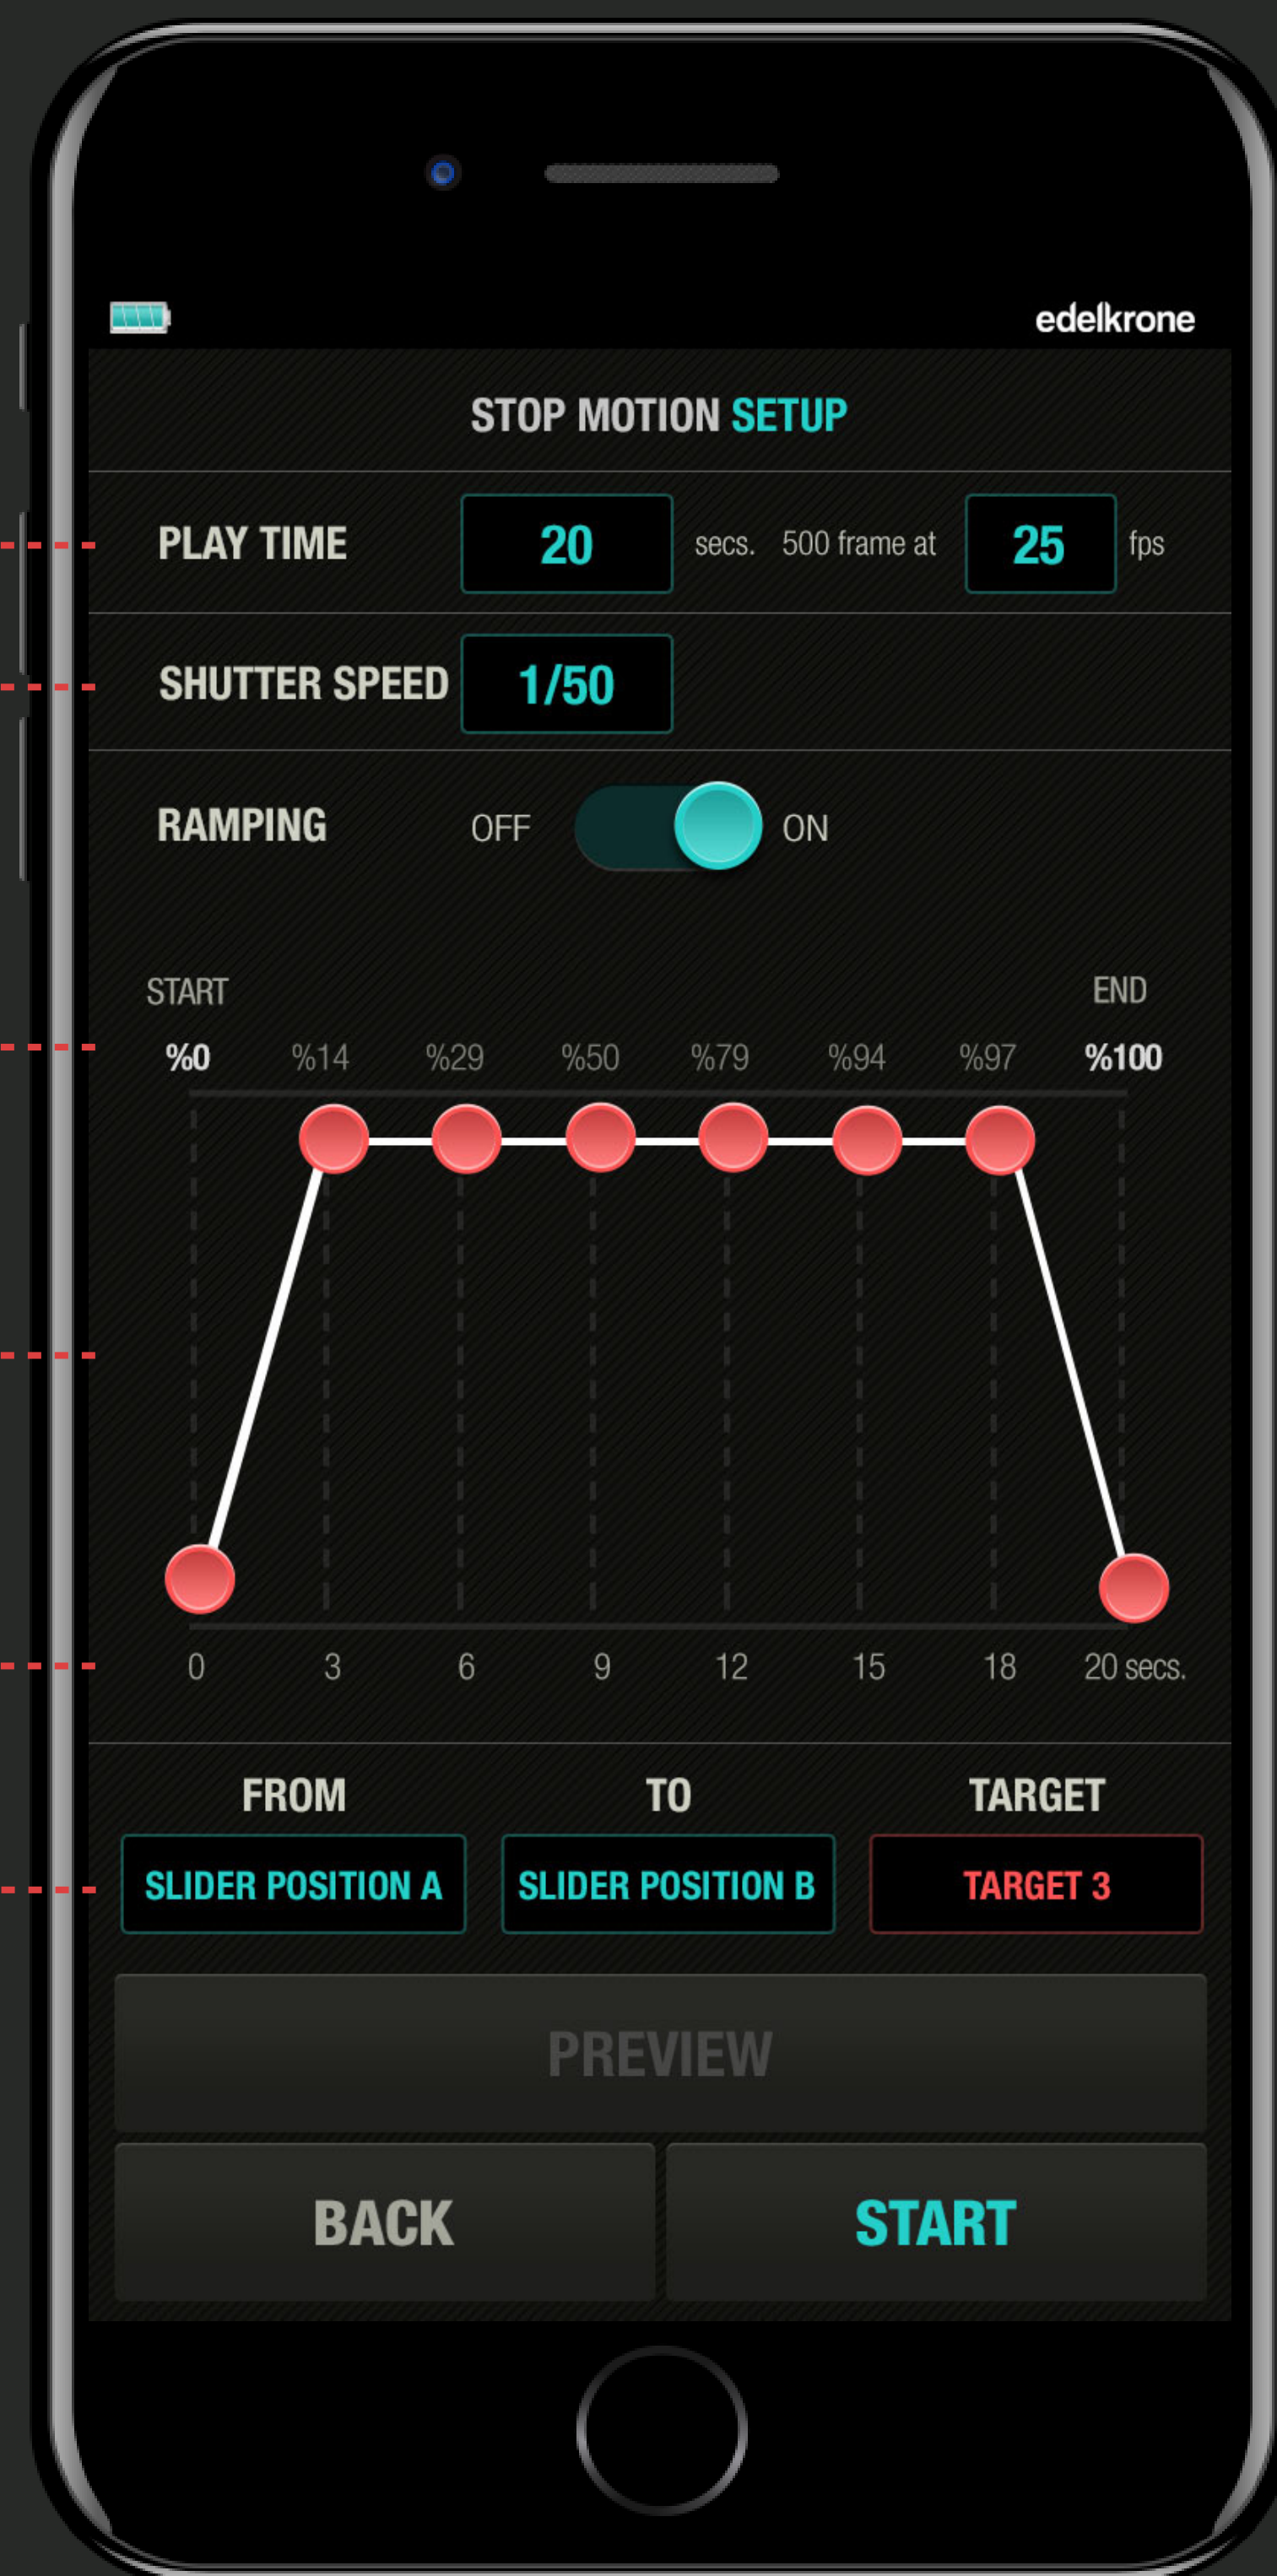

Please choose the shutter speed of your camera.

Progress stamps

Step size will be bigger when the graph is swiped upwards & will be smaller when the graph is swiped downwards.

Frame stamps

Sets Start & Finish positions

Progress bar

Captured frame / Total frame

Captures current frame then goes to next frame automatically.

Captures current frame & stays at the same frame.

SEQUENCER MODE PAGE

User Guide

Tap & choose Poses to create a sequence.

Adjusts the speed of the transition between Poses.

Tap & set percentage of speed.

Transition durations will be updated accordingly.

Adjusts the acceleration & deceleration of the transition between Poses.

Play, Stop, Rewind.

Activates Loop Mode. Remember to activate Loop before starting the operation.

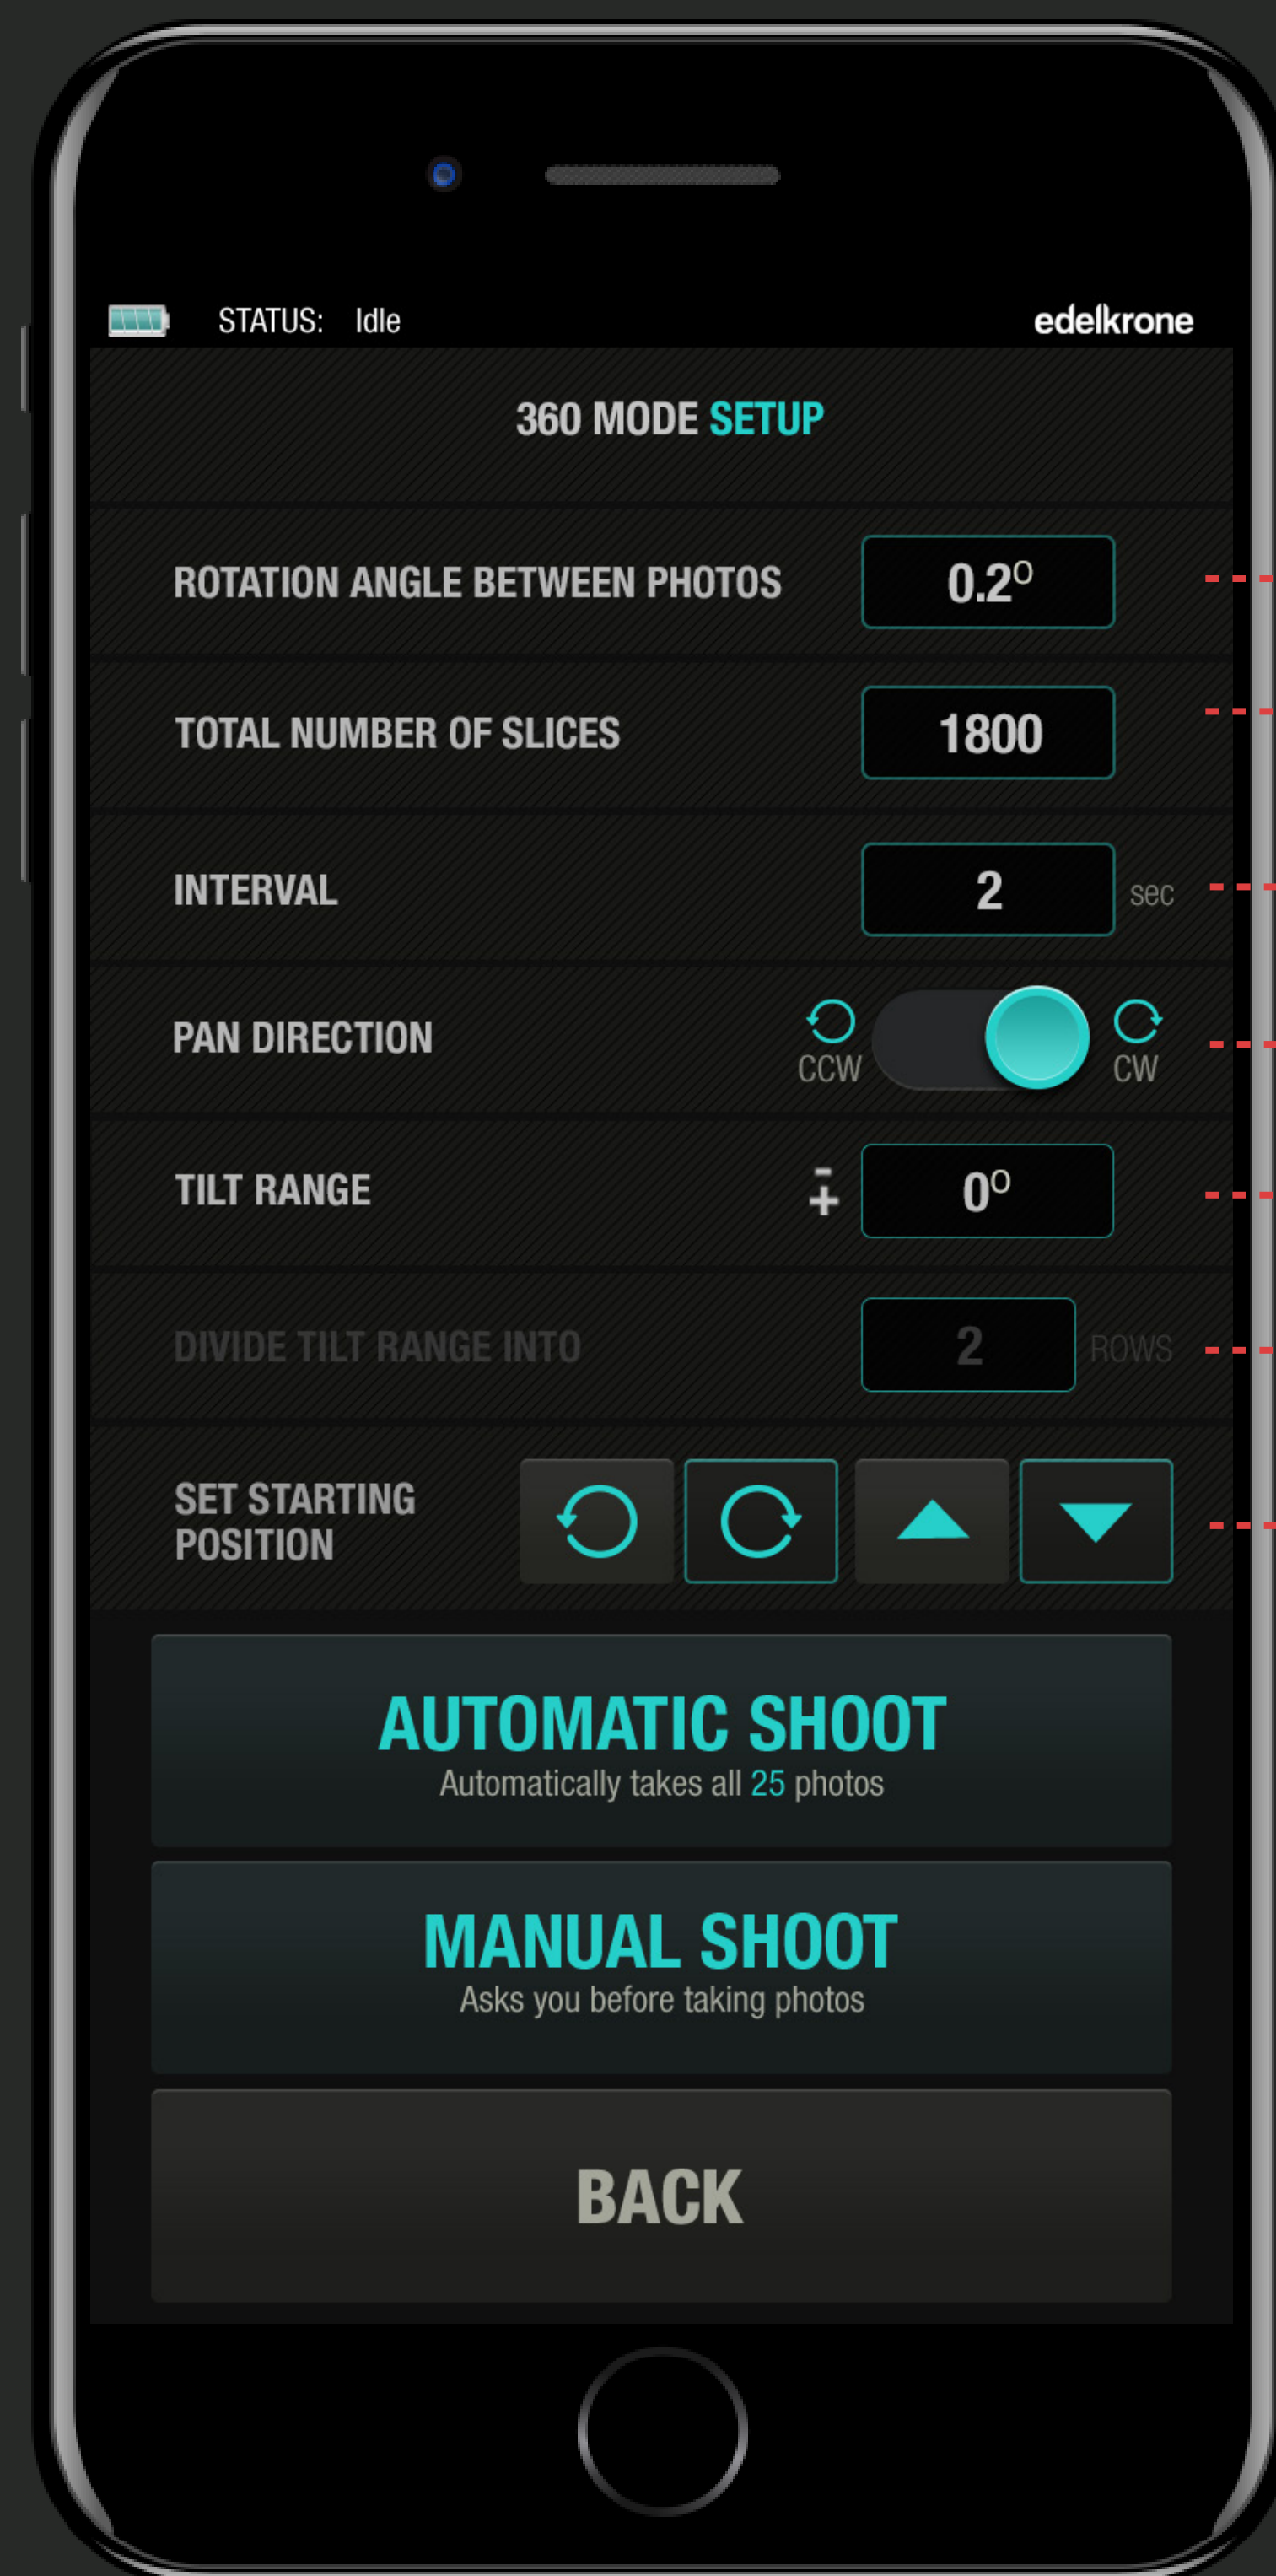

Please see the link for the user manual video of the Sequencer Mode: <https://youtu.be/e9Ty-2UYZYs>

360 Mode Page

User Guide

STATUS: Idle edelkrone

360 MODE SETUP

ROTATION ANGLE BETWEEN PHOTOS 0.2°

TOTAL NUMBER OF SLICES 1800

INTERVAL 2 sec

PAN DIRECTION CCW CW

TILT RANGE 0°

DIVIDE TILT RANGE INTO 2 ROWS

SET STARTING POSITION

AUTOMATIC SHOOT
Automatically takes all 25 photos

MANUAL SHOOT
Asks you before taking photos

BACK

Sets angle between each photo.

360 degree is divided into this value.

Waiting duration after taking photo.

Direction of the rotation. (cw: clockwise ccw:counter clockwise)

Vertical angle that will be covered starting from initial position towards either direction.

Divides tilt range into desired equal pieces.

Manual pan & tilt cursors

} If one changes, the other one is automatically updated.
