Hello,

Welcome to your new A200 kit!

I hope that it sparks many moments of imaginative play and wonderment whether you're building alone, together with family and friends, in your classroom or your design studio.

As an architect, I had an idea to create an easier and more affordable way of building scaled architectural models other than by cutting and gluing materials together for one time usage. The result is Arckit, a collection of reconfigurable, interconnecting components inspired by real modular building methods that let you continuously explore and visualise your architectural ideas with speed and precision.

At the very heart of Arckit is an entirely 'open-ended' tool kit of parts for all ages and which encourages learning while having fun. Each component has multiple uses and every kit has a myriad of design possibilities for you to reveal, allowing you to freely express your designs without limitations or restrictions of instructions. I liken Arckit to any instrument, the more you engage with it, the more proficient you become and the more amazing undiscovered creations you will start to bring to life.

Happy Building!

A handwritten signature in black ink, appearing to read "Damien". The signature is fluid and cursive, with a prominent loop at the end.

Bring it to life

CONGRATULATIONS! You finished your first sample building. Now, use your A200 Accessories Set to create unique scenes.

All the Arckittexture decals here are reusable and can be easily placed on solid and clear wall panels. Feel free to apply them anywhere on your model.

Slot the pop-out elements together to stand upright.

Now, what will you build next?

Keep building with your set and if you need some inspiration for your next creation, use the QR code to access exciting 3D construction videos and a further 3+ building ideas with instructions available online:
