LEARN AND PRACTICE BOOK

Helping today's students master maths
and be ready for GCSE 9–1

Provides purposeful practice in fluency, reasoning and problem solving in one book

Develop skills with thousands of practice questions

Supports learning with hundreds of worked examples

Ensures a smooth transition from KS2 to KS3 with a consistent mastery approach

CHAPTER 4 Negative numbers

4.1 The number line

- I can use a number line to order positive and negative numbers, including decimals
 - I can understand and use the symbols $<$ (less than) and $>$ (greater than)
- Using a number line helps you to order negative and positive numbers.

Develop fluency

Which number is greater, -7 or -3 ?

Because -3 is further to the right on the number line than -7 is, it is the larger number.

Dan wrote $-6 < 4$.

His sister said she could write the same thing but with a different sign.

Explain how she could do this.

Swapping the numbers around and using the greater than sign gives $4 > -6$, which is the same thing but with a different sign.

Write these temperatures in order, from lowest to highest.

8°C , -2°C , 10°C , -7°C , -3°C , 4°C

Draw a number line then mark the numbers on that line.

You can see that the order is: -7°C , -3°C , -2°C , 4°C , 8°C , 10°C .

- State whether each statement is true or false.
a $5 < 10$ b $5 > -10$ c $-3 > 6$ d $3 < 6$
- Copy each statement and put $<$ or $>$ into the \square to make it true.
a $6 \square 10$ b $5 \square -2$ c $-1 \square 9$ d $-3 \square -1$
- Write down the lower temperature in each pair.
a -1°C , -8°C b 2°C , -9°C c -1°C , 9°C d -3°C , -1°C
- Put these numbers into order, starting with the lowest.
a -0.5 , 0 , -1 b -1 , 2 , -5 c -1.1 , -1.6 , -1.9
- Write down the greater number in each pair.
a -1 , -3 b -6.5 , -5.6 c -1.2 , -2.1
- Put these numbers into order, starting with the highest.
a -3 , -2 , -5 b -1 , 1 , 0 c -3 , -3.3 , -1.3
- Put these numbers into order, starting with the lowest.
a -0.8 , 0.5 , -1.2 b -1.5 , 2.3 , -5.9 c -3.3 , -2.7 , -3.8

© HarperCollinsPublishers Ltd 2019. Restricted to use in schools that have purchased the KS3 Maths New Learn or Practice Book. Sharing or copying by schools who have not purchased is an infringement of copyright law.

47

Chapter 4

- 8 Write down the higher temperature in each pair.
a -211°C , -108°C b -58°C , -29°C c -101°C , -99°C d -73°C , -61°C
- 9 Write down the highest number in each set.
a -5.5 , -5.3 , -5.6 b -7.5 , -7.6 , -7.9 c -4.2 , -4.5 , -4.1

Reason mathematically

Leo said, -6 is larger than -4 .

His sister said he was wrong.

How could she explain to Leo why he was wrong?

She could draw a number line and place -6 and -4 onto the line, showing that -6 is further to the left than -4 and that the further left a number is on the line, the lower the number is.

- 10 Carla was told that the temperature outside would drop by 5°C that night.

She said that it must be freezing outside then.

Explain why she might be incorrect.

- 11 A submarine is at 40 metres below sea level.

The captain is told to move to 20 metres below sea level.

Does the captain move the submarine down or up? Give a reason for your answer.

- 12 Explain how you know that -5.1 is higher than -5.9 .

- 13 James has a bank balance of £187. He pays his energy bill of £53.62, and his credit card bill of £228.51. Explain why his bank balance is now negative.

Solve problems

Work out the number that is halfway between -3 and 2 .

Draw a number line showing both -3 and 2 .

Count 4 spaces between -3 and 1 , so halfway is 2 spaces from the -3 , which is 1 .

- 14 Bernie took the lift. He started on floor 2. First he went up two floors to marketing. Then he took the lift down seven floors to the canteen. Then he took the lift up two floors to the boardroom. Finally he took the lift up four floors to the IT department.

On which floor is the IT department?

- 15 Luke has £137 in the bank, he pays a bill of £155 and also pays £50 into his bank. Then pays another bill of £40. How much will he have in his bank account now?

48

© HarperCollinsPublishers Ltd 2019. Restricted to use in schools that have purchased the KS3 Maths New Learn or Practice Book. Sharing or copying by schools who have not purchased is an infringement of copyright law.

Chapter 4

Reason mathematically

In a magic square, the numbers in any row, column or diagonal add up to give the same answer. Could this be a magic square? Give a reason for your answer.

		-6
	2	
-1		-3

The diagonal adds up to -5 .

So the missing number on the bottom row will be -1 .

And the missing top number in the other diagonal will be -4 .

From the middle vertical numbers, -1 and 2 , the missing top middle number is -6 .

From the two numbers in the top row, -6 and -4 , the missing top number of the middle column should be 5 .

Since -6 is not the same as 5 , these rows and columns do not add up to the same number, so is not a magic square.

- 6 In a magic square, the numbers in any row, column or diagonal add up to give the same answer. Could this be a magic square? Give a reason for your answer.

-3		-7
		4
		-5

- 7 Alf has £124 in the bank. He makes an online payment for £135. How much has he got in the bank now? Explain your working.

Solve problems

In a quiz, two points are awarded for a correct answer, but three points are deducted for an incorrect answer.

Team A answers eight questions correctly, two incorrectly and don't answer the last two questions. Team B answers all the questions; nine correctly and three incorrectly.

Who wins the quiz?

Team A scores 8×2 points, giving 16, but lose 2×3 points, leaving them with 10 points.

Team B scores 9×2 points, giving 18, but lose 3×3 points, leaving them with 9 points.

So Team A wins the quiz.

TEACHER HANDBOOK

Teach a strong, coherent and well-sequenced curriculum

Sets clear aims and expectations using termly schemes of learning

Demonstrate carefully sequenced and planned knowledge mapped to national curriculum objectives

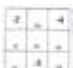

Check understanding and assess impact of teaching with topic reviews and concept comprehension questions

Guide students through fluency, reasoning and problem-solving questions with worked example PowerPoints

Tackle misconceptions with support in the detailed learning schemes

Chapter 4 Negative numbers	
Concept comprehension	
Ordering positive and negative numbers	
Q1 Which is the lowest temperature, 2°C or -9°C ? Ans: -9°C	Teacher guidance: Check pupils are clear that even though 9 is higher than 2, -9 is on the other side of the number line to 0. Use a number line to help with each of these questions, frequently asking pupils to identify the smaller or higher number on the line.
Q2 Explain how you know that 5 is higher than -6 . Ans: Use a number line showing -6 to the left of zero and 5 is to the right.	You want pupils to see the number line in their heads, but this comes from concretely using it on paper themselves. Get them to use the line first, then to see the line in their own head.
Q3 Work out the number that is halfway between -4 and 2. Ans: Draw a number line showing both -4 and 2. Count 6 spaces between -4 and 2, so halfway is 3 spaces from the -4 , which can be seen on the number line to be -1 .	
Adding negative numbers	
Q1 What is the answer to $-2 + 1 - 3$? Ans: -4	Teacher guidance: Get pupils to use the number line in their heads if possible or on paper. In Q1 ask pupils to explain how they found the answer, some will look at it as $1 - 5 = -4$, others will work from left to right, $-1 - 3 = -4$.
Q2 Grannie has £25 in the bank. She writes a cheque for £35. Saying that she now has £10 in the bank. Is she correct? Explain your answer. Ans: No, she is not correct, as $25 - 35$ is -10 , so she has $-\text{£}10$ in the bank which is what we call an overdraft.	Q2 may need overdraft explaining it's what we call negative money in the bank. What we are looking for is a recognition that taking a larger amount away from a smaller amount will give a negative answer.
Q3 Solve this magic square where each row and column adds up to -3 . 	Q3 Ask the question without (a), (b) etc – that is the order to be looking at for the answers at first.
Ans: a 3, b -1 , c 2, d 0, e 1, f -3

1

Year 7 Negative numbers Concept Comprehension

Chapter 4 Negative numbers			
National curriculum links	Contexts and connections		
Understand and use place value for decimals, measures and integers of any size Order positive and negative integers, decimals and fractions; use the number line as a model for ordering of the real numbers; use the symbols $=$, \neq , $<$, $>$, \leq , \geq Use the four operations, including formal written methods, applied to integers, decimals, proper and improper fractions, and mixed numbers, all both positive and negative	Negative numbers are often used when working with temperatures. There are connections with using negative numbers in algebra.		
	4.1 The number line Learning outcomes <ul style="list-style-type: none"> To use a number line to order positive and negative numbers, including decimals To understand and use the symbols $<$ (less than) and $>$ (greater than) Assessment links Year 7: Fractions Core, Fractions Extended and Percentages and statistics Core Year 8: Baseline test and Algebraic expressions Core	Misconceptions <ul style="list-style-type: none"> Believing that -5 is greater than -3, because 5 is a bigger number than 3 Stating that -3 is "bigger" than -5, even though they are both negative quantities Learning sequence Compare two negative numbers Sequence two negative numbers Sequence three negative numbers in context Solve one-step word problems involving negative numbers Answer pictorial questions involving negative numbers Solve two-step word problems involving negative numbers	Support Provide horizontal and vertical number lines (including thermometers) to show pupils the progression through zero. Extension through depth Encourage pupils to look at a thermometer and use it as a number line, or to look at a number line that includes negative numbers. Challenge them to find five numbers that have a mean of -5 , and then to find five numbers that have a mean of zero.
	Key vocabulary greater than, less than, positive, negative, sequencing

Chapter 4 Negative numbers

Chapter 4 Negative Numbers Topic Review

Tick the statement when you feel confident with the skill.

Now I can... use a number line to order positive and negative numbers, including decimals	
Now I can... understand and use the symbols $<$ (less than) and $>$ (greater than)	
Now I can... carry out additions and subtractions involving negative numbers	
Now I can... use a number line to calculate with negative numbers	
Now I can... carry out subtractions involving negative numbers	
Now I can... carry out multiplications involving negative numbers	
Now I can... carry out divisions involving negative numbers	

The number line

4.1.1 Put these numbers into order, starting with the lowest.

a -1.7 , 1.6 , -2.3 b -2.6 , 3.4 , -4.8
 c -4.2 , -3.8 , -4.9

4.1.2 Mae said -8 is larger than -3 .

Hann said she was wrong.
 How could she explain to Mae why she was wrong?

4.1.3 Chris got into a lift on floor 3. He went up four floors to a meeting room. Then he took the lift down five floors to call in his office before taking the lift eight floors up to the library. Finally he took the lift down three floors to the sales department.
 On which floor is the sales department?

Arithmetic with negative numbers

4.2.1 Without using a number line write down the answers.

a $-2 + 4$ b $-5 + 4$
 c $-2 - 7$ d $-5 - 3$

SUPPORT AND PRACTICE WORKBOOK

Teacher Pack with differentiated worksheets to boost confidence and build skills

Factors and multiples 1

I can

- recognise and work out multiples of a number
- recognise and work out factors of a number

Example

- a Write down two multiples of 16.
b Write down all the factors of 16.

Solution

- a Multiples of 16 are 1×16 , 2×16 , 3×16 , 4×16 , and so on.
So two multiples of 16 are two from 16, 32, 48, 64, and so on.
b The factors of 16 are numbers that multiply to make 16.
 $16 = 1 \times 16$ so 1 and 16 are factors.
 $16 = 2 \times 8$ so 2 and 8 are factors.
 $16 = 4 \times 4$ so 4 is a factor.
There are no other factors of 16. There are five all together.

Practice questions

- 1 Write down two factors that multiply to make each boxed number.

- 2 Fill in the missing multiples.

- a Multiples of 2: 2 4 6 _____
b Multiples of 3: 3 6 9 _____
c Multiples of 5: 5 10 _____ 20 _____ 35 _____
d Multiples of 10: 10 20 _____ 50 _____ 100 _____

6

Support students struggling to access KS3 Maths

Help pupils feel a sense of achievement with realistic, tailored practice

Boost confidence with worked examples and scaffolded practice

Provide practice, maths facts and mental maths tests for fluency

Easy to use in one-to-one interventions or catch-up sessions

Mental warm-up 1: Number

- 1 Round 4719 to the nearest hundred.
2 $48 \times 9 = 432$. What is $432 \div 9$?
3 Work out $299 + 399$.
4 Work out $35 \div 4$.
5 Tables seat five people. How many tables are needed for 27 people?
6 What is the hundreds digit in 3456?
7 The temperature is 2°C . It falls by five degrees. What is the new temperature?
8 What fraction of this shape is filled? Write your answer as simply as possible.

- 9 Write 83 mm in centimetres.
10 Here is a sequence of numbers:
30 27 24 21 18
Write down the next number in the sequence.
11 What units should you use to measure the mass of a pen?
12 How many minutes is 25 hours?
13 Write 6.45 am in the 24-hour clock.

Answers to Mental warm-up 1: Number
1 4700
2 48
3 698
4 8.75
5 6
6 3
7 -3°C
8 $\frac{1}{2}$
9 0.83
10 15
11 grams
12 1500
13 06:45

Mental warm-up 2: Number

- 1 Round 18.4 to the nearest 10.
2 $13 \times 15 = 195$. What is $195 \div 13$?
3 Work out $97 - 79$.
4 Work out $73 \div 10$.
5 Work out $43 + 69$.
6 Write in figures six hundred and six.
7 What fraction of this shape is filled?

- 8 The temperature changes from -6°C to -10°C . Has it gone up or down? How many degrees?
9 Write thirty pounds and five pence in figures.
10 Write down the next odd number after 99.
11 A bottle holds 2 litres of water. How many millilitres is that?
12 The time now is 13:45. Write down the time 30 minutes later.

Answers to Mental warm-up 2: Number
1 20
2 15
3 18
4 7.3
5 112
6 706
7 606
8 $\frac{1}{2}$
9 99p
10 101
11 2000
12 14:15
13 1:15
14 2:15
15 1:15
16 1:15
17 1:15
18 1:15
19 1:15
20 1:15
