It is ideal to have 3' or more of deck around pool. If you have less than 3' we can design & offer short deck solutions to ensure a proper fit and safe cover. Brass anchors are provided for pools with a securing type such as concrete, mortared interlock or flagstone. Pipe extension anchors are required for interlock, patio stones, unmortered artificial or natural stone. Lawn stakes are required if the ground is loose and not a securing type like dirt, interlock and loose rock. In case of wood deck, you need to have wood brass anchors. These wood anchors are effective only if the decking is stable and actual lumber (no artificial wood products). Within 3 feet of the pool edge, there cannot be any obstructions such as waterfall, dive rocks, slides or any non-removable items. Removable items (e.g steps and ladders) are allowed.

Please provide additional information and a customer service rep will assist. If you have more custom specifications such as less than 3 feet of deck around pool or obstructions on pool etc, you may need to refer to A-B Triangulation process. All sales are final.

Important: Please attach up to 3 pictures of pool and surrounding deck.
