

# POOL CLOSING INSTRUCTIONS

Got questions? We have answers! For great advice, visit our blog [www.discounterspoolandspa.com](http://www.discounterspoolandspa.com)

- 1 Bring a water sample to Discounter's Pool & Spa Warehouse for analysis one week prior to closing and balance the water as prescribed by the water test results and recommendations.
- 2 Scoop out large debris, brush the walls and vacuum fine dirt from the pool.
- 3 Clean the waterline with a pool surface cleaner and soft bristled vinyl hand brush.
- 4 3 days before closing, add **WAVE SPRING & FALL** to the skimmer of the pool and circulate the water for 24 hours.
- 5 2 days before closing, broadcast **WAVE NOW** shock in the pool. Wait 1 hour and add **WAVE STAIN & SCALE** to the pool. Circulate the water overnight.
- 6 The night before closing, clean your filter media using **FILTER CLEANER** and soak overnight. Backwash your sand filter or rinse your cartridges the next day.
- 7 Lower the water level in the pool just below the return jets or 6" below the skimmer opening.
- 8 Blow out all plumbing lines and plug the returns. Plug the skimmer line using a **FREEZE PROTECTOR**.
- 9 Drain **all** equipment. Put drain plugs back in the pump **only**, and add **ANTIFREEZE** to the pump housing until the internal opening is partly covered.
- 10 Remove any handrails, ladders or diving boards and store indoors for the winter.
- 11 Place the winter cover on the pool and secure it properly.
- 12 Store all accessories and parts in a safe place for the winter.

## ALGAE FREE GUARANTEE

Purchase these 3 products for maintenance and bring in a water test once monthly and we will guarantee your pool will not go green this season!

If it does, we will give you the chemicals to clean up the algae for **FREE** and return your pool to clear.
