

Your Safety. Our Focus.

In an era where companies must delicately balance workplace safety, productivity and privacy concerns, SafetyScan is reinventing the way on-the-job safety screening is done.

Through our **advanced, easy-to-administer, real-time, non-invasive** testing procedure, SafetyScan is reducing employer risk while increasing employee and union acceptance.

A more comprehensive 'fit for duty' test

SafetyScan is transforming employee safety screening by scanning the eye's response to stimuli. It detects ALL forms of impairment that can affect an employee's ability to perform on the job.

ALCOHOL

CANNABIS

NARCOTICS

**SLEEP
DEPRIVATION**

**COGNITIVE
FATIGUE**

TIMES HAVE CHANGED. TESTING HAS TOO.

With the legalization of cannabis, traditional test methods that pick up residuals from past drug use cause problems. SafetyScan only alerts you if the employee is currently impaired at the time of testing - to prevent them from endangering themselves and others on the job.

How the SafetyScan Fitness for Duty Screening System works

01

**SCAN ID INTO THE SYSTEM
FOR IDENTIFICATION**

02

**30 SECOND EYE SCAN
TO DETECT ANY SIGNS**

03

**PASS OR REFER RESULTS
GIVEN TO THE WORKER**

Why SafetyScan?

The Fastest Test Available. Each SafetyScan test takes just 30 seconds per employee and provides immediate results.

Test More. Prevent More. Rapid testing allows you to increase the reach and regularity of your employee safety screening.

A Safe Start to Every Shift. Keeping impaired employees off the worksite will keep ALL employees safer... and reduce OH&S incidents.

Safeguards Your Workers - and Your Reputation.

SafetyScan provides the most comprehensive, accurate, evidence-based fit-for-duty testing available.

Identifies Sleep Deprivation. Sleep-related incidents cost \$350 billion per year worldwide. SafetyScan identifies this risk, which is often undetected.

Greater Value. Significantly reduces the need for 3rd-party testing, to dramatically lower the overall cost of safety screening operations.

Preventative, Not Punitive. SafetyScan identifies workers who are cognitively impaired without revealing the cause of impairment to protect privacy.

Reflects the Reality of Legalized Cannabis. SafetyScan only indicates impairment at the time of testing - and does not reveal usage outside of work hours.

Greater Prevention. Fewer Payouts. Greater prevention reduces incident costs, insurance claims and legal payouts.

Personalized to Each Employee. Over the first 10 days tests establish a testing baseline for each employee to guide subsequent tests.

“Fitness for duty is one of the most critical factors linked to safety incidents and accidents. Previous testing regimes have been ‘after the fact’ to determine if drugs and alcohol were present. This testing in no way helped prevent accidents and became a reason for punishment, rather than prevention. And testing for fatigue, which is as serious, has been almost non-existent. SafetyScan addresses all these weaknesses.”

— L.D. (LORNE) SCHNELL, MBA, P.ENG., PRESIDENT, MAGNORUM GROUP
