

# HANGING GUIDELINES USING WALL CLEATS

for  
RECESS MOUNT

### Quick checklist before hanging...

- The type of hanging hardware to display your Peter Lik fine art photograph depends on the type of wall the photograph will be displayed (ie. a brick wall will require different hangers from a drywall finish). Please consult with a professional when choosing the types of hanging equipment.
- Artwork is best viewed at eye level.
- Use a level when positioning your Wall Cleat onto the wall.
- It's best for two people to hang your artwork to the wall.
- Always use caution when hanging heavy frames.

### The Wall Cleat

Recess Mount frames include a Wall Cleat (or more, depending on your artwork size) in the packaging to hang your artwork.

### IMPORTANT

The Wall Cleat(s) should be attached to the wall via the proper **#7 Flathead Screws** and anchoring system.

### Positioning Your Wall Cleat(s)

Upon receiving your package, the Wall Cleat(s) are temporarily affixed with tape and positioned onto the Aluminum Molding Hook sections (CHECKED AREAS) where they will hook onto your artwork.

Behind the black dust cover there are vertical bars. Do not align your wall cleat(s) to the top center of your artwork. Doing so will prevent your artwork from hanging properly.

### The Hanging Mechanism

### The Aluminum Molding Hook

The top rear of the frame has a built in horizontal hook. This enables you to easily attach your artwork onto the wall cleat(s) once positioned to your wall.

Figure 4, 5, 6A, 6B, 6C. Latch the Aluminum Molding Hook (located on the top rear of your artwork) onto your wall cleat(s).

### Disclaimer

Hanging should be carried out by an experienced professional, and as such, these Guidelines are provided for information only. Peter Lik and LIK USA are not responsible for personal injury and/or property damage notwithstanding your proper adherence to these Guidelines.

### Questions or Concerns?

If you have further questions, consult your local hardware store or contact Collector Experience at [RMA@lik.com](mailto:RMA@lik.com).

## The Hanging Mechanism (continued)

Latch the Aluminum Molding Hook (located on the top rear of your artwork) onto your wall cleat(s).

## \*Alternative Hanging Support

\*Up to 1.5 meter Artwork

### Wall Buddies

Alternate hanging support can be used through the use of the Wall Buddies for artwork sizes up to 1.5 meters. Wall Buddies are attached to the top corners of the frame.

**IMPORTANT:** Do not attempt to use the Wall Buddies to hook your artwork to the wall cleats.

### Wall Buddy Hanging Hooks

figure 8.

Be sure to use hanging hooks with the proper rated weight for your image size.

**Make sure to also use the correct hanging hooks for the right surface.**

An example of DRY WALL hooks are illustrated in Figure 8. (NOT INCLUDED).

## Why is my artwork tilting off the wall?

### Wall Cleat Screws are Round.

Figure 9B. You may be using the incorrect screws for your wall mount.

**Make sure you are using #7 Flathead Screws.** Refer also to Figure 1.

### Center-aligned to Vertical Bars.

Figure 9C. You may have your artwork hooked above the vertical bars (which are behind the black dust cover). Try sliding your artwork to the right or left, which should fix this problem. Refer also to Figure 2.

If you have any other issues with your artwork, please contact Collector Experience at [RMA@lik.com](mailto:RMA@lik.com).
