

ABOUT C & R SUPPLY

For more than 45 years, C & R Supply, Inc. has been a leader in the distribution, manufacture and service of agricultural and roadside spray equipment. Located in Sioux Falls, South Dakota, we sell and service quality products from Raven Industries, TeeJet, Banjo and more. C & R also supplies precision ag products such as GPS guidance systems, variable-rate controllers, mapping, steering assist systems and chemical injection units.

We also lead the way in the design and manufacture of new and advanced products as our customers' needs change. Our product line continually advances to keep up with technology in a way that helps producers maximize their output.

We have an extensive lineup of quality manufactured products for the agricultural, highway maintenance, turf and lawn care industries.

C & R DROP TUBE

APPLICATION OPTIONS

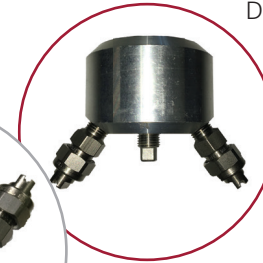

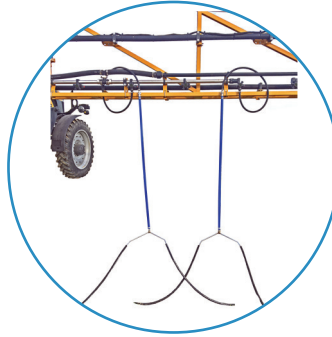

In response to our customers' concerns of high cost and heavy stress weight on the sprayer boom, we created an economical, lightweight and simple — yet effective — drop tube for post emergence application.

POST EMERGENCE APPLICATION... MADE EVEN EASIER

When it's time to make in-season fertilizer, herbicide, insecticide or fungicide applications, you need to get the job done when conditions are right. Our lightweight drop tubes have been mounted up to 48 rows which can mean more acres covered in less time. C & R Drop Tubes have been successfully tested in the field since 2014.

Economical — give us a call and compare.

We manufacture a 3', 4' and a 5' drop tube. Our drop tube kit includes a primary hose, which plumbs the drop tube to your existing nozzle body, and the drop tube itself.

The drop tube connects to either our stainless-steel Y-2ube assembly or our C & R Dual Application Puck. Our Y-2ube assembly includes a set of heavy duty drag hoses for easy, precise application at the base of your corn. Our Dual Application Puck is great for applying fungicide and/or insecticide, as it allows for both under canopy and over canopy application.

Our drop tubes are lightweight and can be mounted to most booms with our Universal Mounting Bracket. Our bracket is made of durable stainless steel and includes a swivel which allows the drop to remain mobile and flexible during application.

If you find our bracket is not compatible with your needs, our drop tube can easily be mounted to your own farm engineered bracket.

KEY FEATURES:

- Lightweight
- Economical
- Smoother in-field performance
- Flexible
- Standard 3', 4' and 5' lengths
- Custom lengths for tool bar applications
