

Your Aftermaster Pro was developed to remaster and dramatically enhance the quality of the audio that is being provided to your Television (TV) or add-on speaker Systems such as sound bars.

Your Aftermaster Pro was designed to be installed between your audio/video source (such as a cable, satellite or gaming box, etc.) and the speakers that are providing the audio to your TV.

It is important to make sure that the HDMI cables are connected to the proper ports.

1. Connect the Aftermaster Pro to an available wall outlet with the provided USB power supply and cable or directly into the back of your TV with the supplied USB cable. If connected correctly, the first and fourth LED should illuminate.
2. Connect the HDMI output of your input device (cable or satellite box, AppleTV, etc.) to the port labeled "Input 1" on the Aftermaster Pro.
3. Connect the port labeled "Out" on the Aftermaster Pro to one of the HDMI input ports on your television. **Do not use an HDMI port labeled "Arc".**
4. Ensure that your television is set to the correct source. **Do not use an HDMI Port Labeled "ARC".**
5. Your AM Pro has two switches, the first switch controls the port selection function and power. The second switch controls Aftermaster processing.

HDMI Connection

HDMI Input Port 1 Selected and Aftermaster is On.

HDMI Input Port 2 Selected and Aftermaster is On.

IMPORTANT:

If you are having any problems setting-up your Aftermaster Pro, it is likely due to an installation error or settings on your input source (Cable box, etc.) or TV. As there are almost limitless settings and combinations of audio/video hardware, you may require assistance with set-up.

When your Aftermaster Pro is installed properly, you should notice a substantial increase in the volume, clarity and quality of your TV audio.

Please contact us at info@aftermasterpro.com or (866) 478-3120 and we would be pleased to assist you.
