

The Mill's 5 B's for the Best Lawn

Best Product | Best Time | Best Rate | Best Place | Best Results

Best Product

Match the correct product to individual lawn needs

Best Time

Improve efficiency of products applied for highest utilization

Best Rate

Optimize amounts for effectiveness while reducing environmental impacts

Best Place

Manage areas to balance needs, economics and ecology.

Best Results

Enjoy your beautiful lawn!

The 5B's of lawn care promote best management practices to achieve a beautiful, healthy lawn. Our goal is a great lawn grown with sustainability in mind. We match products, rates and time to areas that may need to be managed differently for best retention and utilization of plant food to save money and environmental loss.

Step 1: Soil Sample

A soil sample will let you know exactly what your lawn needs. Correcting soil imbalances improves effectiveness of the products you use. Eventually the improved health of the lawn reduces the need for continuous chemicals to control pests and diseases.

Step 2: Talk to one of our Experts

Once we get your soil test results, we can help you create a plan to address soil imbalances and provide the proper level of nutrients at the optimum rate and time for your lawn challenges and goals.

Step 3: Product Application

For best results, apply the best products in the best amount at the best time in the best place. We can help match the most ideal products for your needs.

The Mill

The Mill has received national recognition for sustainability practices with our customers in agriculture. Now we have committed to taking the same sustainability principles that are proving successful for farmers to the turf industry. Our commitment to improved sustainability for homeowner's lawns is designed to improve social concerns in an environmentally conscious way while more effectively and economically achieving homeowners goals.
