

**SandTrap 15 & 30 gl. versions ..and LeafTrap 30**  
 ...the perfect **heavy-solids filter** for Vacuum Reclaim systems.

**LeafTrap version** (left): 30gl LeafTrap version is shown on the left, with the optional Leaf-Bag and Mud-Bucket.. a BIG help cleaning rain gutters !!

**APO tank & SandTrap** (middle): We can add a BagFilter to the inlet if you like.. on the inlet, for dust, leaves, etc. 100. 150 or 200 micron. **Stainless Steel tanks** are available !

**FoamTrap or 15gl. GreaseTrap configuration** (right): 15gl version SandTrap is shown above, with Slide-In **Debris-Screen** for leaves and debris, this filter screen is **optional**

**1 1/2" drain, stainless hardware, beefy chem-resistant fittings, Super Rust-Resistant DOT approved drum, with 2" CamLocks inlet and outlet.**

**Hi-Flow upgrade**

**inlets**

**outlet**

The **SandTrap** has a simple but functional design.. With inlet directing debris downward, and outlet set for over-flow to continue to the Vacuum-Waste tank, without the heavy debris. With 1 1/2" CamLock drain, 2" CamLock Vachose fittings, and Rustproof Hardware, and the beefy, triple-step powder coated tank will last for years and years.  
 ..Like everything else we build.

**Design...**

We've added an inlet at the top of the WasteTank for a "down-throw" of the incoming debris, and the option to add a slide-in filter screen. Also in the 30 gl. version, a Leaf Bag and mud bucket can be added,..  
 ..for Rain Gutter cleaning ..so sticks and Leaves stay in the bag, mud falls in the bucket. (See the image on top left.)

The new **HighFlow upgrade** allows faster separation of air from water flow, allowing more efficient flow water, and require less Hp =fuel savings ! .. The auto-pump-out will work easier & more reliable as well.

For **FoamTrap** applications, were you want extra protection for the blower, from chemicals and corrosion issues.. You may use this tank with slider-in filter as a "last resort" filter, for catching foam or overflow liquids, (as in image on top right.) Just spray the slide-in FilterScreen with De-Foamer liquid, and it costs only pennies to save a blower from "the elements".
