

SandTrap connections to **Auto-Pump-Out** tank

Auto-Pump-Out from inside the APO Tank..
..AKA.. "Vac-WasteTank"

Waste-In from Vacuuming Surface Cleaner, or PuddleSucker

Suction Outlet ..to the Vacuum.

Air Transfer from top of SandTrap
..to top of APO Tank
This keeps air and water separated, and APO pumping more reliably

Waste-Water from SandTrap overflow.
..on Leaf-Trap versions.. this is where it comes out, after the slide-in filter.

Please note- the **2nd inlet** on top of APO tank..
Should be used for connecting a VacuBerm,
..or any tool sucking up lighter (non-sandy) debris.
..and should be capped-off when NOT in use !

Waste-Water from SandTrap "overflow"
Into Drain connect of Auto-Pump-Out tank.
..Make sure the Drain-Valve is open when in use.
