

WEARSAFE STEP-BY-STEP SET UP: SUBSCRIPTION CODE

Thanks for choosing Wearsafe! Here are some simple steps to help you get set up if you are already subscribed.

1. FIRST THINGS FIRST: SET UP YOUR ACCOUNT

Already have an account?

email

password

log in

register

If not, register for a new account.

- Download the Wearsafe App!

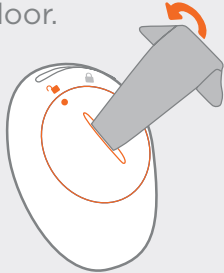

- Select **register**.
(If you can't see the button, your keyboard is probably covering it.)
- Enter the email you'd like to be subscribed.
- Follow the prompts, then check your email to confirm your email address.
- When prompted, select yes, use my code and enter your 12 digit code.

When you reach your app home screen, it should have five buttons. If you only see three, please contact support@wearsafe.com

2. NEXT STEPS: SET UP YOUR TAG

Use the clip attachment to open your Tag's battery door.

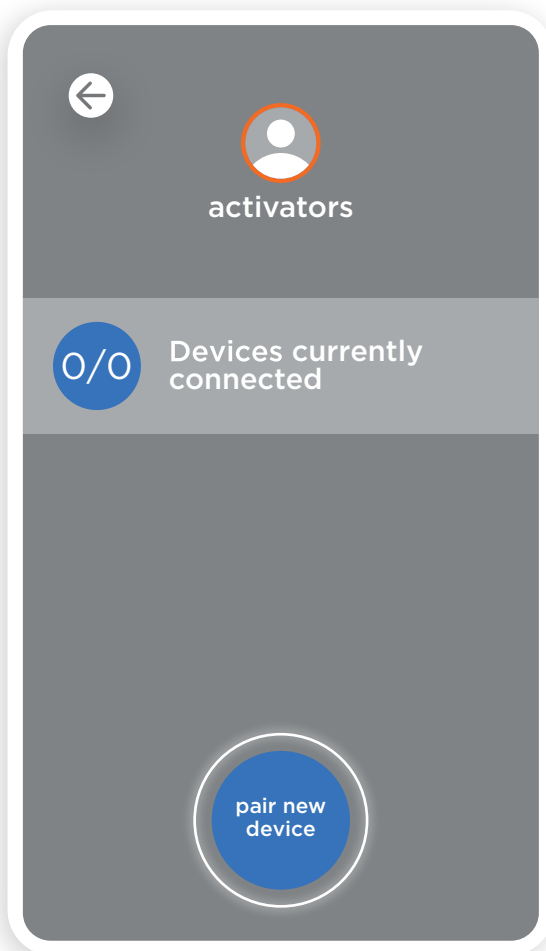

Write down the **4 digit pairing code** on the inside of the battery door.

(You'll need it soon!)

Insert the battery **+ side up**, then close the battery door.

3. PAIR YOUR TAG

pair new device

From the Wearsafe App home screen, select **devices in range**, then pair new device.

pair

Find your Tag's pairing code in the list and select **pair**, then **pair now**.

This is what you'll enter when your phone asks for a PIN:

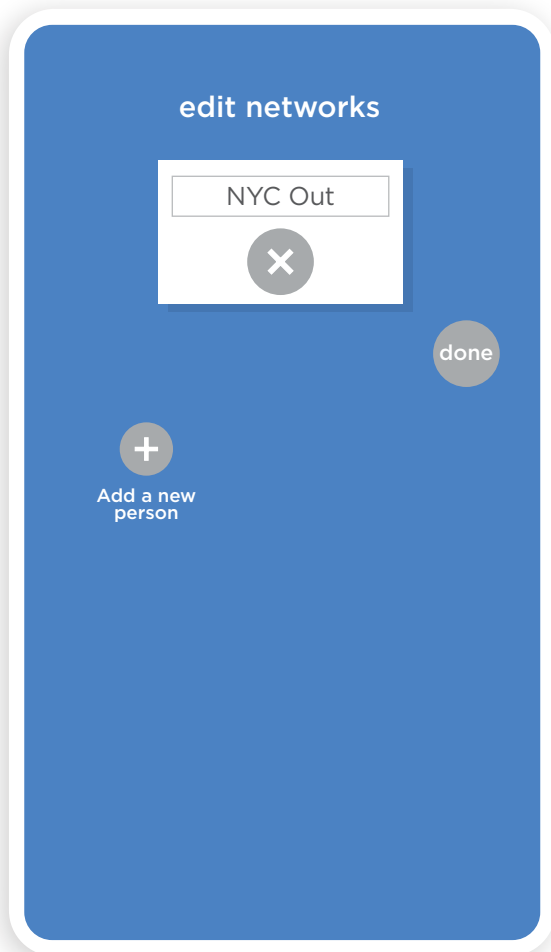

iOS: enter your Tag's pairing code
Android: 00 + Tag's pairing code

Once you've paired your Tag, just follow the prompts to give it a name, choose your Tag settings, and test it.

WEARSAFE TIP! Try out some different Tag settings to see what works best for you! A single press might be too sensitive and send out accidental alerts — our favorite is press and hold.

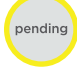

4. NEXT STEPS: CREATE YOUR NETWORKS

To create a network, select **my networks** from the home screen.

-  Tap the plus sign under **add network**.
-  Name your network and tap the plus sign to add people.
-  Once you've finished adding people, tap **done**.

THINGS TO REMEMBER

-  You can invite people from your contacts or add them manually.
-  Contacts will appear as pending until they accept your invitation.
-  You won't be able to send an alert until you have at least one active person in your network.

You can have an unlimited number of networks, but only one can be active at a time.

WEARSAFE TIP! The best part about unlimited networks is that you can create groups that fit your lifestyle. Work, family, travel... the possibilities are endless!

STUFF YOU SHOULD KNOW: WEARSAFE ALERTS

A Wearsafe alert can only be sent if your phone has service or is connected to WiFi. If you try to send an alert while you're out of range, Wearsafe will send the alert as soon as you reconnect.

On Android, pressing your Wearsafe Tag will open the Wearsafe App & send an alert.

On iOS, you must have the Wearsafe App running in the background to send an alert.

You need to have Bluetooth and location services enabled on your phone to send an alert. The Wearsafe Tag connects to your phone using Bluetooth, and your location is essential to getting you help!

STUFF YOU SHOULD KNOW: PEER-TO-PEER SAFETY

Wearsafe is a peer-to-peer safety system, which means it contacts the people you choose to be in your network when an alert is sent. Wearsafe doesn't contact a call center, 911, or any other emergency services directly.

- Please don't attempt to add 911 or other emergency services to a network.
- If necessary, your network members can always call 911 or emergency services for you right from the app.
