The s quote for any models \$850 \$1160 \$195 \$490-\$620 dependin \$470 Price varies per mod 6" \$1020. 10" \$1227 \$235-\$1670 \$449	e specifically designed with separate electrical boxes on each section. They are very easy to dismantle in order to move the kiln to another location or through a stackable electric kilns make maintenance work easily accessible when work is only required on one section of the kiln. Price varies per model. Please ask for a ls that are not on our price list. Olympic Lid Lift Assist is designed so that there isn't any stress on the kiln lid or body with the lid arm, which runs across the top of the kiln. The back brace attaches to the kiln stand as a single unit. Most models 20" and wider are equipped with a Lid Lift Assist. The Lid Lift makes even the heaviest kiln lid easy to open. A Lid Lift Assist is available for smaller Studio Electric and Glass Kilns – 18" wide or smaller and Medallion Artist Series models when placing your order. The Retro-fit Lid Lift is built for kiln owners who purchased their kiln without a lid lift and determine that one is needed. The Retrofit Lid Lift Assist is built for the specific model kiln and shipped with instalment instructions. Please specify the model when ordering. View tutorials for all Controller models at https://plumestudio.nz/ ng on model. Holes for castors are drilled in the kiln stand during production - please order prior to production. del please ask for a quote. As an example, APM Elements for an 1823HE model are \$275 each (x 4 elements = \$1100)

Orton Ventmaster Downdraft Vent \$	Price varies per model please ask for a quote.		
	Price varies per model. Emergency Repair Kit includes 2 elements, crimping tool, pint of mortar, thermocouple, and kiln's wiring schematic.		
	\$1350	The VentMaster works by creating a small downdraft within the kiln, the chamber is kept at a slight negative pressure. Gases and Fumes are pulled out of the bottom of the kiln through a small hole and mixed with fresh room air then exhausted to the outside atmosphere through a 100mm duct (this length of duct is supplied by customer). The system gives the following benefits: Fume removal improves firings. Extends life of elements by removing moisture. Aids in cooling of the kiln if desired. Improves temperature uniformity in the chamber. Helps to remove poisonous & corrosive fumes. The unit sits within the footprint of the kiln. Manufacturers Warranty applies - please refer to their website: https://www.ortonceramic.com	
Orton Ventmaster Expansion Kit	\$POA	Vent two kilns via one Ventmaster motor	
Additional Collars & Rings \$	\$405-\$1035	A blank brick ring without an element can be added to an Olympic Electric or Glass kiln to increase the chamber height, but an additional ring will lower the temperature range because of the increased volume in the chamber*. Blank rings come with stainless steel band and handles if applicable. Blank rings dimensions are the inside width of the kiln x 4.5" deep.*A ring that includes an element which will maintain the kiln's maximum temperature <i>can</i> be added to 18/18H electric kilns - this option adds Amperage to the kiln which may subsequently require a larger Amp fuse.	
Electronic Wall Units \$	\$POA		
Shipping Crate F	Price varies per model. Kilns are shipped on a flat Pallet (at no extra charge). Six-sided custom-made Shipping Crates are available on request.		
Furniture Kits F	Price & contents vary per model please ask for a quote. Custom kits and single furniture items available as requested.		
E	Top Hat Series including Electric Raku. Dual Media for Glass & Ceramics in the same kiln, Large Capacity Front Loading, Large Capacity Electric Car Kilns, Kilns for Blades, Large Capacity Top Loading Glass Fusing Kilns, Annealers & Front Loading Kilns, Oval Glass Fusing Kilns, Vitrigraph Kilns, Square Glass Fusing Kilns, Top & Clamshell Loading Kilns. These models are available on back order only, POA.
