

Olympic Top Loaders

Olympic Top Loaders are built with 3" brick providing extra insulation and energy efficiency. NZ's Olympic Top Loaders are equipped with an automatic lid shut-off safety switch*, Type K Thermocouple, pilot light, metal stand, stainless steel jacket and Bartlett V6-CF Digital Controller. *The auto lid shut-off switch shuts off power to the elements when the lid of the kiln is opened. This additional switch is an NZ Regulation requirement and is included in the prices below.

Type S Thermocouples, Genesis Touchscreen Controllers and other upgrades available on request just ask for a customised package quote to suit your situation.

The Controllers have pre-set programmes for Bisque & Glaze for every cone number. Or you can enter and save your own personalised firing schedules if desired.

Plume's Standard Furniture Kits are a good starter pack or you can customise a furniture kit to specifically suit your ware.

The Olympic proven electrical box design with heat shields and top and bottom perforations keeps the electrical components cool, and balanced heating elements ensure even heating of the firing chamber. All Plume Studio Olympic Kilns are certified to meet New Zealand safety regulations.

Plume Studio Ltd offers full New Zealand back up sales & service with technical advice available 7 days a week.
