Re-Spec the Tradition

TOPBRASS
Re-Spec the Shot

Top Brass, LLC is the premier manufacturer of quality reloading products. Supplying the industry with new and reconditioned brass cartridge cases for over 30 years, Top Brass is the brand most respected by the true reloaders.

Specializing in the remanufacture and reconditioning of 'Once-Fired' brass cartridge cases, Top Brass offers multiple calibers for rifle and pistol platforms. Top Brass also offers new and 'pulled' bullets in multiple types and grain weights, as well as packaging supplies (trays and boxes) to keep the reloader organized.

All products are available under Dealer and OEM programs and come retail ready or in bulk.

Re-Spec the Law

RECONDITIONING PROCESS

QUALITY & PRECISION

EVERY cartridge case manufactured by Top Brass is Quality Control Inspected several times during the production process. With a state-of-the-art, 'Single-Piece-Flow' system, each case must meet our strict dimensional requirements before it continues-on in our production process. In most instances, our brass has tighter tolerances than standard SAAMI specifications.

BEST VALUE IN BRASS FOR YOU AND YOUR CUSTOMERS

Top Brass offers its products with confidence, knowing you're getting a high-value product that complements your reloading efforts. Consistent quality equals consistent accuracy—at a price that optimizes your bottom line.

OFFERING

For PISTOLS & RIFLES, in multiple calibers:

BRASS CARTRIDGE CASES

- New
- Reconditioned 'Once-Fired'

NICKEL COATED CARTRIDGE CASES

- New
- Reconditioned 'Once-Fired'

PROJECTILES

- New
- 'Pull-Down' Bullets

RELOADER PACKAGING SUPPLIES

- Trays
- Boxes

SPECIAL OPPORTUNITY BUYS

Offering a vast assortment of:

- cartridges or bullets;
- new or reconditioned;
- primed or unprimed;
- common or uncommon calibers.

Re-Spec the Hunt

RE-SPEC THE BRASS

RECONDITIONED BRASS

Under normal operating conditions, ammunition cartridge cases have a lifespan greater than a single shot. Unfortunately, it's not as simple as reloading and firing. Returning a cartridge case to its pre-fired condition requires multiple steps and highly-specialized equipment that is cost-prohibitive for most reloading hobbyists.

That's where Top Brass comes in. Our comprehensive reconditioning process ensures our final products are completely ready to load at a significantly lower cost than new brass.

Different calibers have different reconditioning needs. Top Brass takes out the guesswork by performing every step needed to return the brass to within its original SAAMI* specifications for optimal, like-new performance.

**Sporting Arms & Ammunition Manufacturers Institute*

To completely recondition a 'Once-Fired' cartridge case, it must be:
Deprimed > Reamed > Full-length Sized > Trimmed > Polished

RECONDITIONING PROCESS

SORTING

Starting with bulk lots of pre-fired cartridges, Top Brass sorts out any damaged brass, blanks, dummy rounds, training ammunition, and any other unusable material. This is done to ensure that we start with top quality material. All products are then sorted by case/caliber type.

PRE-PROCESS QUALITY CONTROL

Prior to moving the materials forward in processing, Top Brass performs an initial **QUALITY CONTROL** measure by examining the mouth of each brass cartridge to ensure that all nonconforming pieces are discarded. This QC is instituted for 100% of all product.

RINSING

Top Brass begins its recondition process by rinsing all brass and clearing away any excess powder, dirt, and other particles that will hinder further processing. After rinsing, the brass casings are tumble-dried and prepared for mechanical reconditioning.

DEPRIMING & REAMING

Top Brass uses a single-step mechanical process for depriming and reaming each brass casing. First, the spent primer is removed with a punch die, and then excess brass is removed using a small cutting tool attached to our patented Auto-Reamer system. This system ensures uniform precision for each brass cartridge and allows perfect primer placement during reloading.

RESIZING & TRIMMING

As cartridge casings expand when fired, Top Brass takes extra care to precisely reshape each product to its original form using caliber-specific sizing dies. This process uses strict SAAMI specifications for head-spacing, case-mouth dimensions, and all outer dimensions.

In addition to reforming the brass cartridges, Top Brass also trims the top portion of the case (around the mouth) to return the case to its correct length.

WASHING & POLISHING

During resizing, a lubricate is required to provide a uniform and concentric form to the cartridge, as well as to protect the reloading press and the brass case itself. To remove this material, Top Brass washes and polishes all brass cartridges in a proprietary solution that makes them shine better than new.

QUALITY CONTROL

In addition to 100% automated inspection, Top Brass products are also randomly sampled and gauged along the entire reconditioning process. This double inspection insures that every manufacturing station meets industry standards and dimension requirements. Top Brass then performs one last visual QC inspection before final packaging.

PACKAGING

Top Brass offers multiple options in packaging, including retail ready products, as well as bulk packaging. Standard retail packaging types include the following:

- Blister / Hang Packs
- Poly Bags w/ Hang Card
- Free Standing Jugs
