

# Tech-Spec Sheet

## Model: R-RETRO

Rev. no.:

Date:

Page:

### Description

U-RES-Q pouch, contains 16' webbing rescue ladder which deploys automatically when a fall occurs. After a fall, a conscious worker can then climb back to the working surface, or use the ladder to simply keep unwanted pressure off of the legs while awaiting a rescue.

The R-RETRO is designed to be used on existing systems as a retrofit pouch that can be used within a personal fall-arrest system between a user's shock absorbing lanyard, and anchorage. No shock absorbing capability.

### Specifications
