**NOTE:** The proportions of your frame may be slightly different than this illustration.

5. Place roof onto tent frame.

Carefully guide each corner of the roof over each corner of the frame a little at a time. This will allow plenty of slack to properly fit the corners. Do not fully seat the roof at one corner and attempt to stretch corners over frame. Do not use excessive force. Doing so may damage your tent and void warranty.

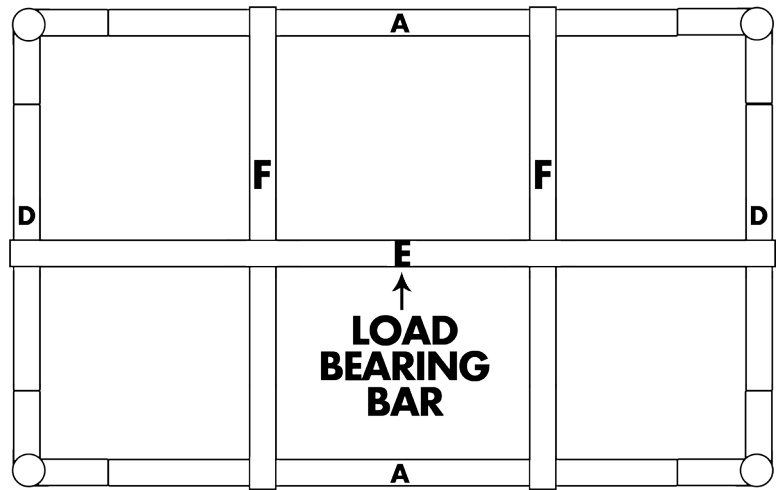

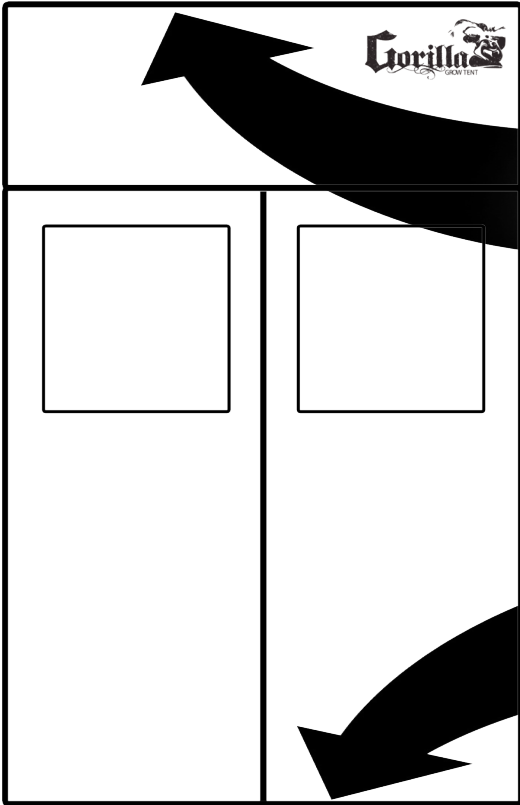

TENT FRAME →
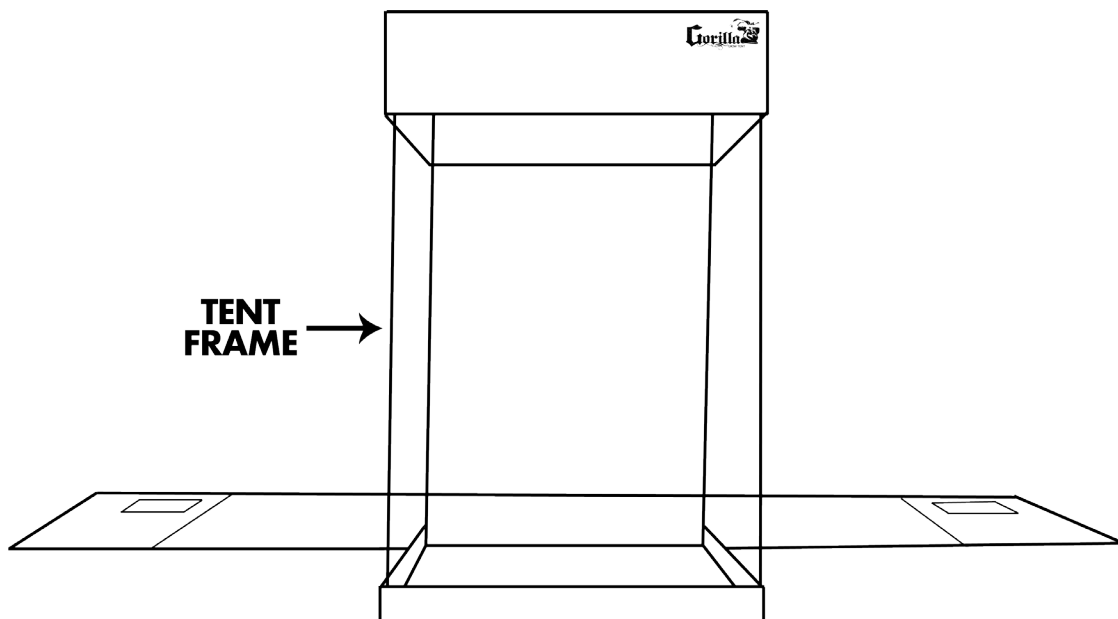

6.

Bring tent body to Velcro assist strips then zip tent.
