
If you need service please call us (360) 930-8059

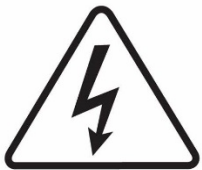

WARNING Temporary Use ONLY!

Electrical cords can be dangerous, use can result in fire or death by electrical shock.

Both sides must be plugged into generators before starting generators.

INSTRUCTIONS FOR USE:

- Plug both Male Plugs into your Generators
- Start the 1st generator, once it has stabilized, Start the 2nd generator.
- Once both generators have stabilized you can plug the load in to the Female Connector.
- If you're having problems starting the 2nd Generator, try starting that one first, sometimes with voltage present it might be hard to start the 2nd Generator

WARNING:

Once one generator is running the male plugs will have full power present and will be EXTREMELY DANGEROUS, DO NOT REMOVE EITHER PLUG WITH POWER PRESENT.

Always shut down both generators before removing or servicing of any component.

**CALL US FIRST!
