* Swellpro Firmware Tool only runs in Win7 & Win10 PC. Don't support iOS.

* Got report some Win7 PC can't run this FirmwareTool. If you have the same problem, try to download a plugin and try:

https://www.microsoft.com/en-US/download/confirmation.aspx?id=42642

* Shut down all the Anti-virus software and Remove the U disk from PC.

Update Firmware:

- 1. Unzip the file to disk.
- 2. Run the file (FirmwareTools.exe).
- 3. Connect the USB of aircraft to computer.
- 4. Wait for update button to be available.
- 5. Click the update button, as shown in figure:

Swellpro Firmware Tool 1.0			x
Click select firmware file for device 2			0 2
C:\Users\BigFl\AppData\Local\Temp\360zip\$Temp\360\$0\firmware\FW_FC_FF1_20200424.1.bin			
Click select firmware file for device 0			0 0
FW Information	Stop	Update	
Firmware information			

View Firmware Version:

- 1. Turn on the power of the aircraft and remote control.
- 2. Connect the remote control USB to the computer.
- 3. Wait a moment, click **FW Information** button to read the current firmware information.
- 4. After the read is successful, the firmware information will be displayed. As shown in figure:

Swellpro Firmware Tool 1.0			x
Click select firmware file for device 2			0 2
C:\Users\BigFl\AppData\Local\Temp\360zip\$Temp\360\$0\firmware\FW_FC_FF1_ACRO_20200424.1.			
Click select firmware file for device 0			0 0
FW Information	Stop	Update	
FW Version: 200424 ID: 63132399 HW Version: 10.10 FlightTime: 4Min BuildBy:SwellproTechnology			

5. If the firmware information read failed, repeat step3.
