Maximum Tick Protection

The best yard protection today combines spraying with ThermoCell Tick Control Tubes. These tubes go where sprays can't reach to kill ticks before they pass diseases on to humans and pets. By treating the mice immature ticks feed on, Tick Control Tubes disrupt the tick lifecycle. Field tests show that after a year of applying Tick Control Tubes, mice are tick free. Developed at the Harvard School for Public Health, ThermoCell provides an environmentally friendly tick killer that doesn't harm kids, pets or the environment.

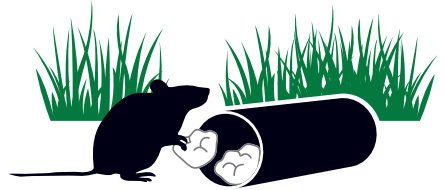

How Tick Control Tubes Work

1

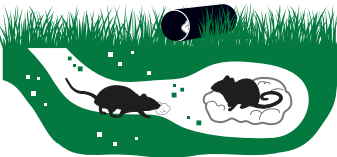

Young ticks feed on mice

2

ThermoCell Tick Control Tubes are filled with cotton treated with permethrin insecticide

3

Mice seek out this ideal nest material and use it to line their nests

4

Ticks feeding on the mice die from exposure to the treated cotton. Meanwhile, the mice are unharmed
