

WATER TREATMENT PRODUCTS

A blue-tinted microscopic image of various bacteria and viruses, including rod-shaped bacteria and spiky spherical viruses, serves as the background for the product name.

BIO-SHOCK™

BACTERIA BOOSTER

MADE IN

U. S. A.

Net Contents:
1 pound / .45 kg

**NATURALLY ENHANCES
BENEFICIAL BACTERIA
FUNCTION IN LAKE AND
POND ECOSYSTEMS**

– For a Clean, Clear and Healthy Ecosystem – Pond Biologics®

BIO-SHOCK™ is a powerful biological treatment to help restore beneficial bacteria in your lake or pond. The accumulation of organic waste/pond muck, dead leaves, plants and fish waste build up during the Winter months overwhelming the naturally occurring microbes in your lake or pond creating undesirable and unsightly water conditions. Replenishing bacterial colonies that have been lost over the winter, in early spring, will increase nature's biodegradation process, creating a sustainable and stable aquatic ecosystem that's clear and safe for recreational use.

- Boost natural biological functions
- Jumpstarts muck reduction
- Decreases unwanted pond odor
- Effective in any water temperature

DIRECTIONS

Application Rate: A 1 pound bag of BIO-SHOCK™ Bacteria Booster will effectively treat up to 1 surface acre of water.

How to Apply: Mix BIO-SHOCK™ in a clean bucket of lake or pond water. Stir until powder is diluted or for approximately 1 minute. Pour in multiple locations around your lake or pond, or near a fountain or boil of an aerator for maximum dispersion.

For best results apply BIO-SHOCK™ as an initial treatment as soon as the weather permits and continue maintenance treatments with POND BIOLOGICS® microbial products on a regular basis.
