

BARLEY EXTRACT

- Barley Straw Extract does not kill algae, but works as an algae preventative. Slowing the growth of algae cells naturally without effecting higher plants, fish, frogs, snails, turtles, pets, humans or waterfowl.
- Barley Straw Extract is nature's natural algae control.
- Barley straw extract is non-toxic, inexpensive to use, long lasting, low maintenance, has beneficial effects, has no water use restrictions and best of all, it works!
- Barley Straw Extract works best by applying it before algae starts growing.
- If Barley Straw Extract is applied after algae are present, it may take longer to see results. When the water is pea green and/or algae mats are floating on the pond or lake surface, it will take more applications and product to be used to get algae under control.

Application Rate of Barley Extract

Small Ponds:

2 ounces per 1,000 gallons of water every three weeks.

Large Earthen Ponds:

64 ounces per ¼ surface acre of treatment area every three weeks.

**If algae are already present, apply barley straw extract every two weeks.*
