

PLATI-GUARD™

TREE PROTECTION MESH

PLATI-GUARD™ Tree Protection Mesh is ideal for safeguarding newly planted and established trees from damage caused by rabbits, hares, deer, livestock in rural areas or machinery such as mowers or strimmers. It can also help promote growth and improve the survival rates of trees.

PLATI-GUARD™ comprises of a soft spongy inner layer made from UV stabilized synthetic fibres and a strong rigid outer layer constructed with double twisted steel woven mesh bonded together to provide increased protection and durability against damage.

Available in two varieties, 'Low-Guard' for mowers, strimmers and smaller animals and 'High-Guard' for larger animals including livestock.

Benefits of PLATI-GUARD™:

- Quick to assemble & wrap around trees / shrubs (no stakes required)
- Available in range of sizes to match your tree circumference
- Mesh construction protects trunk & acts as a natural deterrent to animals
- Superior design life & can be re-used (UV stabilised, chemical resistant)
- Can shield trunk against natural elements (UV & frost)
- Easy to ship with standard tree anchoring & irrigation systems

LOW-GUARD

PRODUCT CODE	TRUNK		EST. PLATI-GUARD SIZES	
	Circumference	Tree height	Width	Height
LG1	Up to 25cm	Up to 4.5m	0.5m	0.5m
