

## **RESIDENTIAL WALLPAPER CARE INSTRUCTIONS**

### **CARING FOR OUR WALLPAPERS**

Smudges can be removed with a mild solution of soap and warm water. Before cleaning, test your soap and water mixture in an inconspicuous area of the wallcovering first to be safe. When cleaning, always take measures to prevent water from dripping behind molding. And stay away from steel wool or abrasives, synthetic sponges, solvents, alcohol, and pine oil as they can damage the surface of the wallcovering.

### **INSTALLING OUR WALLPAPERS**

Professional installation required. Walls should be smooth, clean, and dry before application, and if they're uneven or textured, your professional installer will be able to advise on whether liner is needed. For an ultra-smooth look we recommend skim coating and priming your walls prior to installation. All of our wallpapers are a straight match and are safe to use in well-ventilated bathrooms. We prefer clear adhesives such as Zinsser®-Plus Sure Grip Heavy Duty Clear Adhesive. Never mix cleaning agents together as volatile reactions can occur. Book the paper for 2-3 minutes to allow the paper to soften slightly before hanging. For darker colorways such as our Dark Navy, we recommend painting the walls a dark color prior to hanging to help conceal seams.

## **RESIDENTIAL WALLPAPER CARE INSTRUCTIONS**

### **TRIMMING**

All of our wallpapers come pre-trimmed.

### **CERTIFICATIONS**

- Certified by the Forest Stewardship Council (FSC) to be an eco-friendly choice.
- Made in America.
- Class A-rated.

### **CUSTOM OPTIONS**

Should your project require additional durability for high traffic areas, we have a variety of smooth or textured type II papers to choose from. In addition to paper type, we can custom match to any Pantone or name brand paint color.

### **REFUND POLICY**

All sales are final except in the case of goods received damaged. Wallcovering should be inspected prior to hanging. If the paper is hung or cut into it will no longer be eligible for a *damaged goods* refund.
