

## *BOKEN* **DOUBLECROSS** GRAVEL

### CYCLOCROSS + GRAVEL = DOUBLECROSS

As its name implies, the Boken Doublecross is a dual-sport tire. It is a CX race tire and an aggressive all-conditions gravel tire.

Our engineers optimized the tread pattern for each size. The 33mm gives you that bite you need in high-torque CX racing and tight cornering. The 38mm and 42mm have a fast-rolling center tread for gravel and adventure riding paired with burly side knobs that hook up when the gnar gets gnarly.

With more bite than our file-tread Boken, the Boken Doublecross gives you superior performance on loose, rough, or loamy terrain.

TUBELESS READY

GRAVEL

**70C**

SIZE	BEAD	PSI	WEIGHT
700x33	Aramid	45-60	410g
700x38	Aramid	45-60	465g
700x42	Aramid	40-50	530g

- Center tread balanced for traction & speed
- An abundance of evenly spaced small blocks give maximum traction under high-torque
- High-grip "Boken" compound
- Side blocks hook up in loose corners
- Closely-spaced center tread rolls incredibly fast on hard surfaces
- Support knobs add grip while helping to float over the soft stuff
- Reinforced Sidewalls add flat protection and keep the tire from squirming when run at low pressure
