

THE APEX™ RACK

MOST TRAINING OPTIONS PER SQUARE FOOT

At only 18 sq/ft, The Apex™ rack offers more training options per square foot than any other system on the market. The low profile rack design with functional cable columns, lat pull-low rows, and integrated storage solutions gives you options in a compact space. This is not your simple rack. This is everything the modern training space needs with 25% less square footage than a normal power rack. Training requirements have changed. Strength and conditioning facility needs are greater than ever. Home gyms have evolved past a barbell and pull-up bar. This is an all-inclusive training system that can be customized to fit any room or application. The Sorinex Apex rack has changed the game. Bring the versatility of Sorinex training systems to your compact commercial space, large facility accessory stations or garage gym.
