

# DIAMOND BAR

The Sorinex Diamond Bar is an industry first and Sorinex Original. Designed in 2002 when President/CEO Bert Sorin needed his trap bar (hex bar) to work within the rack to overhead press, but existing models were too short. The Sorinex Diamond Bar was born and became the first of its kind long enough (16-inch sleeves) to integrate into a rack. The Double Handle Diamond Bar features varied pulling positions that are easy to use by simply flipping the Diamond Bar over. Pull, press, deadlifts, shrugs, carries and more.
