

# HIGH BRIDGE

The Sorinex High Bridge is a variable length rack connector that can be used in conjunction with a multitude of implements. An industry first, providing an integrated system for space saving efficiency between racks, rigs, or station-to-station. The Sorinex High Bridge brings the athlete outside the rack allowing them to perform specific movements utilizing various attachments, attachment points, and suspension tools between your Base Camp, XL Series, and Dark Horse Racks. Attach a TRX strap, another batwing bar, cable machines or storage solutions to utilize all of the space in your facility. Keep your athletes in a centralized location and control the risk in your training environment.
