

INDEXING CHIN BAR

The Sorinex Indexing Chin Bar replaces static overhead pull-up options with variable positioning for an integrated overhead system for safer and more efficient movement. Attach anywhere inside of racks for increased space efficiency. Indexing handles rotate and lock in at 45-degree increments for 8 different pull-up angles. These handles can be moved closer or further away from each other for wide/narrow grip variations, as well. The Sorinex Indexing Chin Bar supports the athlete inside of the Base Camp, XL Series, Apex, and Dark Horse Racks. Control the risk in your training environment. Allow more athletes than ever to train at one station, increasing the carrying capacity of your facility. The Sorinex Indexing Chin Bar comes standard on all Base Camp Series w/ Uber Package racks.

SPECIFICATIONS

LENGTH	41"
WIDTH	10"
