

THE DARK HORSE™ RACK

DESCRIPTION

The Sorinex Dark Horse Rack was designed to address the need for a durable, economical, and reputable rack system. The sides of this power rack are fully welded which increases strength and decreases the amount of assembly. We designed the Dark Horse Rack at 7'6" tall to fit under 8' ceilings. It comes standard with both 1.25" and 2" chin bars for multiple training options. It is constructed from 3" x 3" 11 gauge American steel tubing. The optional rear Plate Storage Add-On is made of 2" x 2". The Sorinex Dark Horse rack offers an affordable and safe Sorinex training system to anyone in the strength training community.
