

My Pet Command MPCGPS3 GPS Dog Fence Collar

Please check this Video on Setup tips: -

<https://www.youtube.com/watch?v=h9YUbgR2AvI&t=50s>

Please always allow about 25FT space from house Boundary walls to the start of any fence lines. Also allow 5-25Ft Variance for Positioning due to GPS Satellite Positioning

Test Procedure is: -

1. Connect APP to collar when you are with your collar (Make sure **Bluetooth and location services** are switched ON on your smartphone for connection to happen). Please note **Bluetooth connection between collar and APP is short distance only like 10-15FT**, so when connected make sure collar and APP are close to each other
2. **If You have more than 1 Collar**, you connect to one collar one at a time via Bluetooth and the APP. Please note APP is Only used to setup/download and test your fence so once all setup your **collar works on its own without any connection to the APP** and fence is stored in the collar memory not the APP.
3. Setup and save fence (**Click Finish**), which will download fence to collar
4. Also **activate Fence Switch to ON** and we recommend Alarm level 3 (Refer to Manual on levels). Collar LED will blink Either red/Green when fence is activated.

Green Flash= Strong Satellite signals (Collar is outside)

Red Flash=Weak/No Satellite signals (For example collar is inside house)

5. Go Outside with the collar in your hand and connected to your APP and wait few minutes for the collar to blink Green so it has got Satellite signals. With a connected collar to the APP and Green Blink, on your app you will see Paw Icon which shows the collar positioning and you can reference that to its real position. Always allow some Variance as explained above

6. Walk around with connected APP with Green Flash on collar and you will see the positioning of your Collar on the APP during testing ***

***Refer to Video above and allow 20-25Ft Variance positioning and you may need to adjust your fence appropriately till you get it right

7. Always do some dog training first with your dog before leaving your collar on the dog. Depending on your dog Breed and character of your dog some dogs may learn quick and some may need more time. Have patience with your dog and some on leash training may be recommended. Use Manual training function if required. You Can also get Flags to Mark out Boundary see example this link <https://www.amazon.com/gp/product/B08MQZ4ZLR?th=1>

Once you are happy with your fence, you can train your dog **and APP does not need to be connected to collar as collar works on its own once it has fence loaded. Please note this is not an online tracking collar**

Dogs Can wear collar inside a house and in an area with no signals, collar will blink RED and won't do anything.

Always remember when a collar comes from an area of no signal to signal for example from inside house to outside, it will need 1-3 Minutes to get the signals and position itself correctly and get Green Blink. Here are also some other videos for reference

https://www.youtube.com/watch?v=sM-DEiOkF_Q&t=19s
