# Gel Polish Removal Guide

What you need:

- 180 Grit File • Nail Buffer • Lint Free Pad • Kiki London Remover
- Foil • Orange Stick • Cuticle Oil

1. With a soft file (180 grit), buff over the top surface layer of the nail
2. Soak a small piece of lint free pad in some acetone and place it on the nail
3. Wrap a piece of foil around the nail and fold over the top to make sure it's secure
4. Wait 10 minutes
5. Unwrap the foil, and the gel should just slide off - if you have any little pieces of gel remaining, just scrape them away gently with an orange stick
7. Buff over the nail surface
6. Apply Kiki London Cuticle Oil to replenish oil as it has been sat in acetone and this can dry out the nail
