+

Recipe scaling, batching and labeling for your iPad.

About us

Recipeasy was born out of necessity ...

to make large, complex, and expensive industrial quality scaling, batching and labeling both affordable and simple. This system fits any business size, from the corner mom-and-pop bakery to large multi-location establishments.

Our purpose is to enrich the lives of our customers by making their business less stressful, more economical, and easier to manage. On top of this, you gain the peace of mind that cherished recipes will be followed without fail.

Scalability and Ease

Recipeasy balances powerful scalability with ease of use. From small to large scale operations, as staff needs grow or change, security and accountability can become a concern. Users and groups can easily be added or deleted, and recipes are assigned to only those who should have access. Whether opening your second or 1,000th location, you can administer the entire system with a single iPad and have changes flow to all locations.

Recipe Guidance

Using pictures and video clips at every recipe step and ensuring ingredients are weighed correctly, quality is maintained, and no detail is overlooked. Showing steps visually reduces the need for staff to read cumbersome instructions and eliminates the chance of errors. Labels can be printed and attached to prep recipes for accountability and shelf life information.
