

Giffy Tent Ballasting System

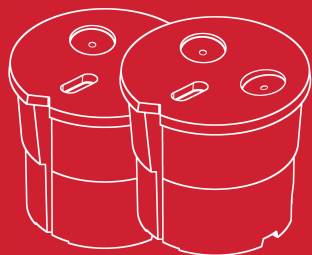

When you buy a tent, you want the set up process to be quick and easy, and you want to be confident it will stay in place. The Giffy Tent Ballasting System was designed to meet those demands while eliminating the problems experienced with other ballasting systems.

- Weighted solutions such as stone, concrete, or metal are expensive to transport and difficult to move.
- Traditional water barrels are unsafe because they cannot hold the volume of water needed to ballast the tent. They also do not have the ability to properly attach to the frame, and this may cause the barrel to tip over and damage the tent.

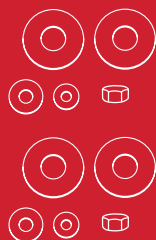

Snap-on lids feature convenient holders for flower pots or other decorative containers.

A Complete System

Engineered specifically for supporting Atrium Frame Tents, the Giffy Tent Ballasting System features modern white barrels with snap-on lids, a ratchet strap, and a mounting plate that attaches to the poles included with your frame tent.

2 Barrels with lids

Hardware

Mounting Plate

Spud Wrench

Ratchet Straps

Exceptional Strength

Filled with water, the barrels weigh 660 pounds – 220 pounds more than the typical 55-gallon barrel – providing exceptional mounting strength. They take full advantage of the weight by attaching a ratchet strap to the bottom of the barrel and can be used to anchor open tents in winds up to 50 mph.

When additional strength is needed, our highly engineered double-unit mounting plates allow you to place two barrels side by side. That's 1,320 pounds when filled.

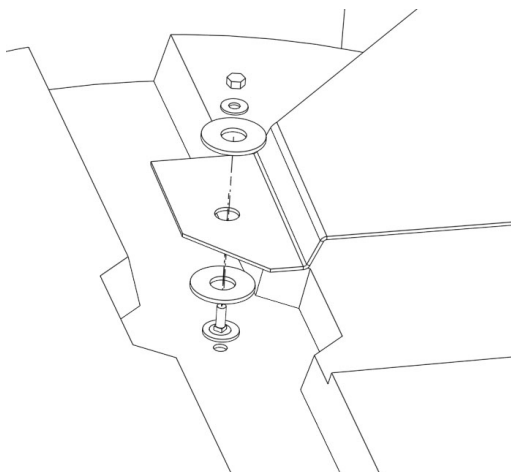

Easy to Transport

The Giffy Tent Ballasting System empties in just a few minutes. It's stackable and can be moved in the back of a pickup truck.

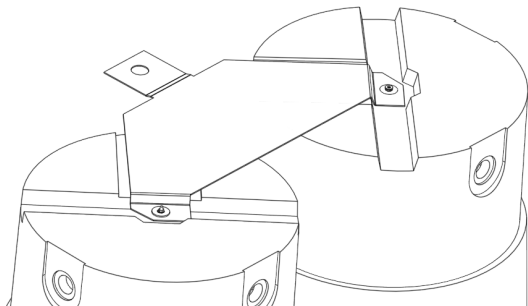

Set Up Is Easy

Step 1: Turn the barrels upside down to connect each to the mounting plate using the following directions.

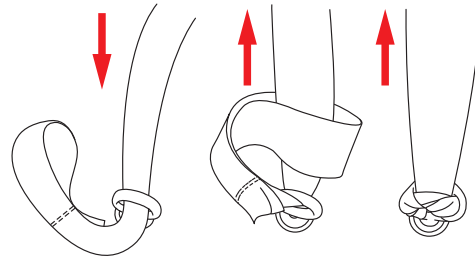

Complete the steps below for each barrel.

- Put a large washer over the nut and bolt.
- Place the plate over the washer.
- Place another large washer followed by a smaller washer.
- Place and tighten the nut.

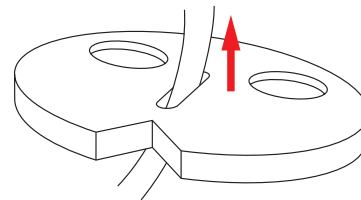

- Flip the barrels right side up and insert a tent baseplate that was included with your tent frame kit.

Step 2: Connect the strap to the eye bolt in the bottom of each barrel.

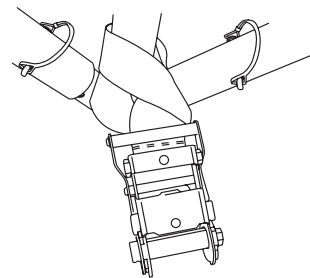

- Pull looped end of the strap through the eye bolt. Take the other end of the strap and pull it all the way through the loop. Pull long end tight to secure strap to eye bolt.

- Pull the strap through the cover slit.

Step 4: Once the ratchet straps are attached to the tent and barrels, carefully lift the tent leg and place it onto the baseplate that you previously installed into the plate. Secure with a bail pin.

Step 5: Fill the barrel with water, and tighten ratchet straps.
