

The Original Magnetball™

A revolutionary Anti-Limescale Device from Austria

- ✓ Prevents hardwater-mineral build-up in washing machines
- ✓ Reduces the use of detergent by up to 50%
- ✓ Eliminates the need for chemical fabric softeners
- ✓ Protects your washing machine and the environment
- ✓ Safe for use in front-load washing machines

For use in the washing machine or the dishwasher, bathtub, humidifier, watering can, tap, etc

Award Winning Product

Made in Austria

How does it work?

As water passes through the magnetic field of The Original Magnetball, dissolved calcite molecules in the water will spontaneously form calcium carbonate crystals (CaCO_3). The presence of the magnet in the water will then cause the calcite crystals to break up into smaller, disc-shaped particles (aragonite and vaterite) that will easily be flushed out with the water instead of attaching themselves to surfaces, appliances or clothing.

Thus water becomes "wetter", because magnetically treated calcite will release several hundred H_2O molecules per single calcium molecule. The ability of water to dissolve dirt is therefore greatly increased.

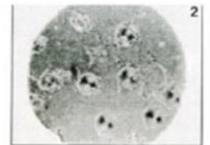

The magnetic field of The Original Magnetball will even dissolve existing calcification in appliances and surfaces over time, and calcite or limescale deposits that have built up on clothing will be flushed away so your laundry will become soft again.

Water under the Microscope

THE PROCESS OF MAGNETIC TREATMENT

Calcium Crystal begins to form

Calcium molecules transformed into disc-shaped particles

TRANSFORMATION PROCESS: A calcium crystal in H_2O during Magnetic Treatment

Spontaneous formation of a calcium crystal in the magnetic field

Calcium molecule breaks apart during magnetic treatment

Calcium particles are transformed into disc-shaped structures that are flushed out
