

CHESS

32 SKYSCRAPPERS

-
- Alexander Goretskiy is not only the jewellery designer. He designs a big variety of objects finding his inspiration in everything that surrounds him. He has been working on “CHESS | 32 Skyscrapers” Project for many years trying to surprise the world with its uniqueness and symbolism.

-
- The “**CHESS | 32 Skyscrapers**” is an architectural ensemble of 32 high rise buildings (skyscrapers) resembling chess pieces, connected by the same stylistic properties and corresponding sizes.
 - These buildings will be placed in various locations around the world, with potential to connect several black and white “pieces” into one ensemble.

-
- The first object (317m) within the architectural complex – “White Queen” is projected to be built in Doha, Qatar.

-
- **Mission:** The “CHESS | 32 Skyscrapers” project’s mission is to create the world’s most spectacular architectural ensemble whilst connecting and uniting the most beautiful locations around the Earth and forming an exclusive community with shared values, passions and innovative culture.
 - **Vision:** The “CHESS | 32 Skyscrapers” strives to contribute to both global relations and local communities, providing fascinating, highly functional landmarks for everyone to enjoy using renewable resources and environmentally safe materials.
 - **Concept:** Each building presents a ultra-luxury residences, hotels, high-end shopping malls, modern entertainment facilities and restaurants, innovative 360 rotating viewpoints, exclusive members club, hologram theater, lighthouse

BACKGROUND

- The society has been using a physical form of currency for thousands of years. Gold, silver, and other precious stones have always had particular value and high level of liquidity.
- The paper money started to dominate only in the beginning of the 20th century but very soon were losing its real value. As well as electronic money. We personally believe this is an unsuccessful experiment of the 20th-21st century and very soon society will switch back to the physical form of payment, to the money that has real value behind it.
- So, we have been developing an alternative to fiat currencies and wanted to create something that is reliable, stable, beautiful, travel-friendly, convertible and could be used all over the world without losing its value.

SO, WHAT IS THE CHESS PROJECT?

- The CHESS project started to arise based on the following idea:

If you have your own money, then you can think about your own state/community

- The state that would not violate international laws, but harmoniously fit into the world order without prejudice to anyone's interests, leading its own economy, politics (within the framework of the current legislation).
- The community that will not be limited by borders, continents and religion but will share the idea of modernity, success, technology, business, travel, sustainability and using natural/renewable energy resources. Anyone can become a member of this progressive state/community.

WHY CHESS?

- While creating something today, you must think few steps ahead and how relevant it will be in 50, 100 or more years anticipating people's needs and desires in the future. The chess is a great example of it as this game that was created more than 1500 years ago remains relevant today and steps to the future surpassing a new level.
- The analogy with CHESS in architecture is a big game and the first move has already been made.
